OF THE

## REGISTRAR GENERAL'S ANNUAL REPORT FOR 1872.

## REPORT:—

	PAGES
GENERAL REVIEW of FACTS for the Year . . . . .	v
REGISTRATION of BIRTHS; Causes of Deficiency in . . . . .	v-vi
CAUSES of DEATH; proportion uncertified by qualified practitioners . . . . .	vi
EMIGRATION from the UNITED KINGDOM, 1863-72 . . . . .	vii
INCREASE of POPULATION, 1871-72, and INFLUENCE of EMIGRATION thereon . . . . .	vi-vii
METEOROLOGY at GREENWICH; PRICES of WHEAT, MEAT and POTATOES; and PAUPERISM . . . . .	vii-viii
MARRIAGES. Number celebrated according and <i>not</i> according to the Rites of the Established Church; Conditions of Persons married; Ages of Persons married; Marriages of Minors; Signatures of Marriage Registers; Educational condition of different Counties, as shown by the Signatures of Marriage Registers; Buildings registered for the Solemnization of Marriages; Certified Places of Worship; Designations of Religious Bodies . . . . .	ix-xv
BIRTHS. Number registered; Sex; Children born <i>in</i> and <i>out of</i> Wedlock, and Proportions of Illegitimate Births in various Counties; Seasons . . . . .	xv-xvii
DEATHS. Number registered; Death-rate; Sex; Age; Mortality of Males and Females at various Ages; Seasons; Locality; Death-rate in Urban and Rural Districts; Deaths in Public Institutions . . . . .	xvii-xxi
PUBLIC HEALTH ACT . . . . .	xviii
PROGRESS of REGISTRATION. Aggregate Number of NAMES on the REGISTERS, Particulars as to the Alphabetical Index to the Names, and NUMBER of SEARCHES in the Registers and of CERTIFICATES granted at the CENTRAL OFFICE . . . . .	xxi
UNITED KINGDOM. Population, Emigration, Marriage, Birth, and Death Rates . . . . .	xxi-xxii
THE ARMY. STRENGTH and MORTALITY of the ARMY at HOME and ABROAD . . . . .	xxii
THE NAVY. STRENGTH and MORTALITY of the NAVY at the DIFFERENT STATIONS . . . . .	xxii-xxiii
BIRTHS and DEATHS of BRITISH SUBJECTS at SEA; MARINE REGISTER BOOK; MORTALITY from DISEASES and INJURIES in the MERCHANT SERVICE compared with that in the ROYAL NAVY . . . . .	xxiii-xxiv
WILLS. Calendars of Grants of Probate and Administration kept at the General Register Office; Numbers and Values of Probates and Administrations . . . . .	xxiv
SUB-DISTRICTS OF ENGLAND AND WALES; Area and Population . . . . .	xxiv-xxvii
FOREIGN STATES. Population, Marriage, Birth, and Death Rates . . . . .	xxvii-xxix
SUMMARY of the QUARTERLY REPORTS:—	
FIRST QUARTER, ending 31st March . . . . .	xxx-xxxv
SECOND QUARTER, ending June 30th . . . . .	xxxv-xl
THIRD QUARTER, ending September 30th . . . . .	xl-xliv
FOURTH QUARTER, ending December 31st . . . . .	xliv-xlviii
HEALTH of LONDON and of other large Cities . . . . .	xliv-lvi
METEOROLOGY; Remarks by James Glaisher, Esq., F.R.S. . . . .	lvii-lix
PRELIMINARY TABLES . . . . .	lxii-cxxii

## ABSTRACTS:—

MARRIAGES Registered in England in each of the Registration Divisions and Counties, and Districts; distinguishing those according and those <i>not</i> according to the Rites of the Established Church; in each quarter of the year; and distinguishing also Persons married according to their conjugal Condition, Minority, and Signature of the Register by marks . . . . .	2-25
AGES of 291,014 Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows . . . . .	26-28

ABSTRACTS—*continued*.

	PAGES
MARRIAGES, BIRTHS, and DEATHS Registered, and Excess of Births over Deaths, in each of the Divisions, Counties, and Districts; also BIRTHS and DEATHS and EXCESS of BIRTHS over DEATHS in each of the Sub-districts of England; distinguishing the Sexes and Illegitimate Births throughout . . . . .	30-84
BIRTHS Registered in the DIVISIONS and COUNTIES (distinguishing Males and Females) in each of the Four Quarters . . . . .	86-89
BIRTHS of Children born out of Wedlock Registered in the DIVISIONS and COUNTIES (distinguishing Males and Females) in each of the Four Quarters . . . . .	90-93
DEATHS Registered in each of the Four Quarters (distinguishing Males and Females) in DIVISIONS and COUNTIES . . . . .	94-97
DEATHS of Males and Females in Public Institutions . . . . .	100-117
DEATHS of Males and Females at different AGES Registered in DIVISIONS, COUNTIES, and DISTRICTS . . . . .	120-141
CAUSES of DEATH of Males and Females in ENGLAND at different Periods of Life . . . . .	144-149
SUPPLEMENTARY TABLE of CAUSES of DEATH of Males and Females in England at different Periods of Life . . . . .	150-153
CAUSES of DEATH of Males and Females in LONDON at different Periods of Life . . . . .	154-159
CAUSES of DEATH of Males and Females in ENGLAND, and in each of the DIVISIONS and COUNTIES . . . . .	160-183
DEATHS from SEVERAL ZYMOTIC and OTHER CAUSES, and INQUEST CASES, in the DIVISIONS, COUNTIES, and DISTRICTS of ENGLAND . . . . .	184-195
VIOLENT DEATHS in ENGLAND, distinguishing SEX and AGE . . . . .	196-200
VIOLENT DEATHS in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX . . . . .	201-205
DEATHS returned as having occurred from SUICIDE in ENGLAND, distinguishing SEX and AGE . . . . .	206-207
DEATHS returned as having occurred from SUICIDE in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX . . . . .	208-209
DEATHS returned as having occurred from MURDER and INFANTICIDE in ENGLAND, distinguishing SEX and AGE . . . . .	210-211
DEATHS returned as having occurred from MURDER and INFANTICIDE in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX . . . . .	212
DEATHS returned as having occurred from MANSLAUGHTER in ENGLAND, distinguishing SEX and AGE . . . . .	213-214
DEATHS returned as having occurred from MANSLAUGHTER in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX . . . . .	215

## APPENDIX.

## LETTER TO THE REGISTRAR-GENERAL ON THE CAUSES OF DEATH IN ENGLAND, BY WILLIAM FARR, Esq., M.D., F.R.S. :—

Coroners' Inquests . . . . .	219
Certification and Registration of the Causes of Death . . . . .	220-223
CAUSES OF DEATH :—

# REPORT

TO

The Right Honourable GEORGE SCLATER-BOOTH, M.P.,  
President of the Local Government Board, &c. &c.

*General Register Office, Somerset House,  
7th July 1874.*

(1872.)

SIR,

I HAVE the honour to submit to you my Report on the Registration of Marriages, Births, and Deaths for the year 1872.

The registers have all been carefully examined and revised at this office, and I am now able to report very accurately the numbers of marriages, births, and deaths registered during the year. The marriages and the births exceed the numbers recorded in any previous year; and, after allowing for increase of population, their rates are considerably above the average. The rate of mortality was below the average.

As for legal as well as statistical purposes, it is important that these three facts in the life of the people should be all authentically registered, I propose to state here to what extent, in my belief, that result is achieved; and to what causes any existing imperfection is due. All the marriages, since the date of Lord Hardwick's Act,\* have been registered in England; and there is no reason to believe that the registers of the last year were incomplete. Not so the births. The Act of 1836† lays it down in clause 19, that the parent of a child, or the occupier of the house in which a child was born, "*MAY within forty days give notice of the birth to the Registrar*"; and in clause 20 enacts, that the parent or occupier shall give the required information, *on being requested so to do by the Registrar*. It was not enacted that the persons who best know shall give the information; and there is no punishment for the neglect; no penalty for refusal. Any one who has administrative experience will see the difficulty of working such an enactment. How can a Registrar who is paid a shilling a case for every birth registered ascertain the occurrence of every birth, legitimate or illegitimate, in every house, in every street of London? In other large towns, or in wide districts, the Registrars encounter similar, or equal difficulties. I have urged the Registrars, through my Inspectors, to adopt the most effective means for getting information from all sources, and it is gratifying to me to state that through their exertions, with the assistance of the enlightened part of the public, the number of births that escape registration has constantly declined. The precise extent of the deficiency cannot be determined; but I am disposed to believe that the annual deficiency in the last ten years does not exceed the estimate in the last Census Report,‡ and that was 13,614 out of 763,623. The probable annual deficiency in the ten years 1841-50 was 38,036, in the next ten years 19,323, and in the last ten years, as has been already shown, 13,614. The deficiency thus rapidly declined: calculated on 1000 births occurring, it was in the three decades, 65 in the first, 29 in the second, and 18 in the third. I have no hope of effecting the

\* 26 Geo. 2. c. 33.—1753.

† 6 & 7 Will. 4. c. 86, clauses 19, 20.

‡ Vol. 4. Appendix A., p. 55.

registration of all the births until the Legislature arms me with the power of carrying out the intentions of the Act under the pressure of a penalty clause, which in practice would rarely or ever after the first year have to be enforced. If every parent of a child were directed to give early information of its birth to the Registrar, and subjected to a penalty for neglecting this duty to the child and to the State, I confidently believe that few births would escape registration. The record would be complete; the missing links in pedigrees would be reduced to a minimum; children would be under the protection of the law, and they would no longer be under the many disadvantages arising from inability to prove their age and parentage, by a birth certificate.

I have reason to believe that a certain number of children born alive are buried as stillborn, and that of deaths buried without a Registrar's certificate a few are never registered. The officiating clergyman is bound in every such case to give notice of the burial to the Registrar of the sub-district in which the death occurred; but this is not, for various causes, invariably done.

The causes of death are certified on forms which I supply, in the great majority of cases by the medical attendants of the deceased or by the coroners; but I ascertained in the year 1871 that in about 8 per cent. of the deaths the cause was not certified by a qualified practitioner. A certain small number of medical practitioners refuse to fill up the certificates for various reasons; in about 2 per cent. of the cases there was no medical attendant; and in the residue of the cases the sick children and adults were attended by chemists and druggists, by herbalists, by bonesetters, by quacks, and by various orders, of unqualified people. In a considerable number of sub-districts every death is certified; in a few sub-districts, especially of Wales and Cornwall, the certificates fall to a very low proportion.

I am of opinion that the grant of the certificate, which is now voluntarily given by the great majority of practitioners, should be rendered compulsory to meet the exceptional cases, and that some means should be adopted to secure the best returns of the cause of death procurable in every case. While asking power to meet exceptional cases I feel bound to express my thanks to the College of Physicians and to the medical profession generally for their friendly co-operation in carrying out the Act.

*Increase of Population.*—From the rate of increase observed in the thirty years 1841–71, the population of England and Wales enumerated on 3d April 1871 is estimated—by the middle of 1872—to have increased to 23,067,835.

The estimated population at the middle of 1871 was 22,782,812, so the estimated increase from the middle of 1871 to the middle of 1872 was 285,023.

The *natural* increase of population as represented by the excess of births over deaths, in the year ending 31st December 1872, was 333,642; but this number will always be in excess of the *actual* increase of population owing to the outflow by emigration.

295,213 emigrants left the ports of the United Kingdom, at which there are Government Emigration Officers, in the year 1872, including 120,780 English, 19,918 Scotch, 73,959 Irish, and 80,556 Foreigners. 5,696 emigrants whose birthplaces were not stated are proportionally distributed in this statement. Deducting the English emigrants from the *natural* increase of population, a balance of 212,862 remains to which a certain proportion of emigrants from Scotland, Ireland, and other parts must be added in order to obtain the *true* increase of population.

It had not been observed before that great numbers of the emigrants to the colonies, and to the United States return to England until this was proved in the Census report of 1871. The numbers of returning emi-

grants in the ten years 1861-70 were estimated at 251,984. Upon inquiry after this estimate was made, the fact that great numbers returned to England was proved by information in the possession of the Emigration Commissioners. Something of the same kind was going on in 1872 but probably not to the same extent.

The emigration Reports show that there has been a large increase in the number of *English* emigrants during the last four years, as will be seen by reference to the annexed Table showing the nationality of the emigrants from the United Kingdom during the last ten years :—

YEARS.	English.	Scotch.	Irish.	Foreigners.	Not distinguished.	Total.
1863	61,243	15,230	116,391	7,833	23,061	223,758
1864	56,618	15,035	115,428	16,942	4,877	208,900
1865	61,345	12,870	100,676	28,619	6,291	209,801
1866	58,856	12,307	98,890	26,691	8,138	204,882
1867	53,494	12,866	88,622	31,193	7,778	195,953
1868	58,298	14,954	64,965	51,956	6,182	196,325
1869	90,416	22,559	73,325	65,752	5,975	258,027
1870	105,233	22,635	74,283	48,366	6,033	256,540
1871	102,452	19,232	71,067	53,246	6,438	252,435
1872	118,190	19,541	72,763	79,023	5,696	295,213
Total in } 10 Years }	768,175	167,529	876,410	409,651	80,469	2,302,234

In proportion to population the number of Irish emigrants is greater than the English or Scotch, but it is worthy of notice that previous to 1869 the *absolute* number of Irish emigrants had exceeded the English, whereas, in each of the years 1869-72 the reverse was the case.

The number of Foreign emigrants—chiefly Germans, Norwegians, and Swedes, passing through this country on their way to the United States and to British North America, has rapidly increased; in 1864 they numbered 17,347, whereas in 1872 they amounted to 80,556, or 27 per cent. of the total number of emigrants who left the Ports of the United Kingdom at which there are Emigration Officers. The war between Germany and France appears to have affected the numbers in 1870.

*Meteorology.*—The most remarkable feature of the year 1872 was the excessive rain-fall. The land during the last three months of the year was for a time thoroughly washed and purified, and this almost unprecedented fall of rain has in many ways been most beneficial. The mortality was sensibly less than in the two previous years of severe and partial drought. The total fall of rain was enormous, and each of the last three months showed an excess. During the quarter rain had fallen at Greenwich on 67 days, a greater number than had been previously experienced as far back as the year 1815. The total fall in the 67 days amounted to 11·32 inches. The previous instances of large falls at Greenwich were as follows :—

YEAR.	Amount fallen.			Total Fall in the Quarter.	Number of Days of Rain in			The Quarter.
	Oct.	Nov.	Dec.		Oct.	Nov.	Dec.	
1821	in.	in.	in.	in.				
1821	2·42	4·33	4·72	11·47	11	20	19	50
1822	3·60	3·66	2·26	9·52	12	16	6	34
1824	2·44	3·88	3·55	9·87	12	14	17	43
1831	3·65	2·70	3·47	9·82	19	15	19	53
1832	4·41	4·48	2·08	10·97	16	15	16	47
1833	2·87	2·51	4·95	10·33	13	11	27	51
1841	5·84	2·75	1·92	10·51	22	13	18	53
1844	4·01	4·74	0·34	9·09	15	13	6	34
1852	3·75	5·66	1·72	11·13	15	22	19	56
1865	5·90	2·39	0·87	9·16	19	13	10	47
1868	2·59	1·16	5·45	9·20	13	12	23	48
1872	4·33	2·92	4·07	11·32	22	24	21	67

It has been shown\* that an inch deep of rain weighs nearly 101 tons per acre. For every 100th of an inch, therefore, upwards of a ton of water falls. The rain-fall registered at Greenwich was 11.32 inches, so that upwards of 1100 tons of water fell in the last three months of the year on each of the 37,000,000 acres of England and Wales. It is known that the rain-fall in the greater part of England exceeds the amount registered by the Astronomer Royal; so that this is the minimum quantity that fell. The rain-fall of the year at Greenwich was 30 inches.

The mean temperature of the year at the Royal Observatory, Greenwich, was mild, being  $50^{\circ}.7$ , or  $1^{\circ}.3$  above the average. The meteorology of the year is ably described by Mr. Glaisher, F.R.S., in his remarks on pp. lvii–lix. See also Tables, pp. xviii–ci.

*Prices.*—Owing to the frequent fluctuations and severity of the weather throughout the concluding months of the year 1871, and to the heavy rains in the autumn of 1872, which damaged the cereal crops, the yield of the harvest of 1872 was below the average. The weather was also more unfavourable to the potato plant than in any year since 1846–8, and the crop largely failed: the wholesale price of potatoes, which was 77s. per ton in 1871, rose to 131s. 6d. per ton in 1872, representing an increase of 71 per cent.

The official returns show an increase in the number of cattle and sheep, but the foot and mouth disease, and pleuro-pneumonia were unprecedentedly virulent in all parts of the country, and rinderpest broke out in the autumn. Towards the close of the year, however, there was an abatement of these diseases, attributed by some authorities to measures of repression, and by others to the beneficial action of the excessive rain-fall on the soil and atmosphere.

There was a great advance in the price of butchers meat in the three years 1869–71, and in 1872 it was still very high. Beef, as sold by the carcase at the Metropolitan meat market, ranged from  $5\frac{1}{4}d.$  per lb. for inferior quality to  $7\frac{3}{4}d.$  for superior quality. Mutton was from 6d. per lb. for inferior quality to  $8\frac{3}{4}d.$  for superior quality. Beef was at the same price as in 1871, but mutton was dearer, indeed, the price of mutton of superior quality was exorbitant, for it was  $8\frac{3}{4}d.$  per lb.

In the five years 1852–56 the average price of beef was about  $5\frac{1}{4}d.$  per lb., of mutton  $5\frac{1}{2}d.$  per lb. In the five years 1868–72, both beef and mutton were 1d. per lb. dearer, representing an increase in the price of the former of 19 per cent., and of the latter of 18 per cent.

The great increase in the supply of gold during the last quarter of a century has resulted in its depreciation, or in other words, in a general rise in prices. The changes that have been brought about by the somewhat rapid rise in prices and wages in 1872 is one of the most remarkable events of the year. The connection of these economic phenomena with the annual numbers of marriages and births, and with the public health, must be carefully observed.

*Pauperism.*—The effects of general prosperity and abundant employment are visible in the returns of pauperism for the year. The report of the Local Government Board shows a material decrease in the pauperism of the country. From a return showing the number of paupers—exclusive of lunatics in Asylums and vagrants—it appears that on the last day of the last week in 1871 there were 930,902 paupers including 150,093 in-door, whereas on the corresponding day of 1872 there were only 838,636 paupers, including 147,657 in-door, showing a decrease of 92,266, or 9.9 per cent. in 1872.

The average number of paupers receiving relief on the last day of each week amounted to 137,278 in-door, and 714,970 out-door, against 143,605 in-door, and 803,797 out-door in the previous year.

## MARRIAGES.

The year 1872 is remarkable as a year of defective harvest, cattle-plague, excessive rain-fall, rise in the price of coal and iron, and rise in the prices and wages of labour. The price of wheat was high, viz., 57s. 1d. per quarter, the average price in the ten years 1862-71 being 51s. 2d. per quarter; and there was a general rise in the price of various commodities, but as a set-off against the general and rapid rise of prices, the working classes found full employment at good wages, and, confirmatory of previous experience, the prosperity of the people expressed itself in an increased marriage-rate. The country, therefore, may now be said to have recovered from that commercial depression which began in 1866-7, and which had the effect, as shown in the annexed figures, of depressing the marriage-rate, more or less, in each of the five years 1867-71 :

Years.	Persons married to 1000 persons living.			
1866	-	-	-	17·5
1867	-	-	-	16·5
1868	-	-	-	16·1
1869	-	-	-	15·9
1870	-	-	-	16·1
1871	-	-	-	16·7
1872	-	-	-	17·5

In the year 1872, 201,267 marriages were celebrated, so 402,534 persons were married, a number considerably in excess of those in any previous year, and 22,310 more than in 1871. The marriage-rate (persons married to 1000 population) was 17·5, or 1·0 above the mean of the last thirty-five years, and 0·8 above the rate in 1871.

Comparing the marriages in 1872 with the mean number in the ten years 1862-71, the increase, in proportion to population, is found to be greatest in the manufacturing counties, and in the counties where the iron and coal districts abound. Thus the mean rate in the ten years and the rate in 1872, respectively, in each of the undermentioned counties was as follows:—Northampton 14·7 and 17·5, Stafford 16·9 and 19·5, Warwick 16·2 and 18·4, Nottingham 16·4 and 19·8, Derby 15·5 and 17·0, Chester 16·0 and 17·0, Durham 17·1 and 19·7, Northumberland 18·9 and 21·0, Monmouth 17·1 and 20·4, Cumberland 15·1 and 16·8, Westmorland 13·6 and 14·4, Lancaster 18·8 and 20·6, South Wales 16·1 and 17·8. In the counties of Kent (extra-metropolitan), Sussex, Wilts, Dorset, and Hereford, the rates exhibit a striking decrease.

*Forms of Marriage.*—Of the 201,267 marriages, 152,364, or 76 per cent., were solemnized according to the rites of the Established Church, and 48,903, or 24 per cent., were performed *not according* to its rites. In the five years 1841-45, as shown in my last Report, the proportions were 92 and 8 per cent. respectively. This decrease in the numbers married according to the rites of the Established Church is chiefly accounted for by the large and increasing number who avail themselves of the form of marriage at the Superintendent Registrars' Offices without religious rites.

In August 1836, by the Act 6 & 7 William 4. c. 85, it was enacted that all places of religious worship "may be registered for solemnizing marriages therein," and by the end of the next year (1837) 946 buildings were registered for this purpose, 396 in the following year, 221 in 1839, and 181 in 1840, until in the year 1855 (when only 98 buildings were registered) the number on the register amounted to 3658.

In July 1855, by the Act 18 & 19 Vict. c. 81, entitled *An Act to amend the law concerning the certifying and registering of places of religious worship in England*, it was enacted that "all places of religious worship, not being churches or chapels of the Established Church, should, if the congregation should desire but not otherwise, be certified to the Registrar General."

Many places were in consequence certified for public worship, which is a necessary preliminary to registration for the solemnization of marriages. The passing of this Act appears to have led to a striking increase in the number of buildings annually registered for the solemnization of marriage, as is seen in the following table :—

YEARS ending 31st Dec.	Number Registered less Cancellations each Year.	Number on the Register each Year.	YEARS ending 31st Dec.	Number Registered less Cancellations each Year.	Number on the Register each Year.
1837	946	946	1855	98	3658
1838	396	1342	1856	153	3811
1839	221	1563	1857	114	3925
1840	181	1744	1858	147	4072
1841	120	1864	1859	156	4228
1842	119	1983	1860	175	4403
1843	160	2143	1861	161	4564
1844	160	2303	1862	190	4754

1854	107	3560	1872	264	6904

Thus the number of places of worship where marriages can be solemnized—not connected with the Establishment—increased, and the number of marriages performed not according to the rites of the Established Church also increased proportionately.

Of 100 couples who married in 1872 according to the rites of the Church 101 married by special licence, 11 by licence, 85 after banns, and 3 by Superintendent Registrar's certificate, while in nearly 1 per cent. the clergy omitted to state under which of the foregoing heads the marriages should be classed. Of 100 couples who married not according to the rites of the Church 17 were Roman Catholics, 41 were members of various Christian denominations, 1 Quakers, 9 Jews, and 41 were married at Superintendent Registrars' Offices.

Marriages according to Quaker rites are decreasing, and the numbers in the last five years were 73, 50, 48, 53, and 44. The marriages among

Jews have increased; the numbers in each of the last five years were 306, 336, 358, 396, and 428.

*First Marriages; Re-marriages.*—Of the 201,267 marriages in 1872, 164,589 were between bachelors and spinsters. 47,359 persons were married who had been previously wedded. Of the 27,534 widowers who re-married, 16,853 married spinsters, and 10,681 married widows; while of the 19,825 widows who re-married, 9,144 were espoused by bachelors, and 10,681 by widowers. Thus there is an evident tendency in widowers and widows to intermarry. Of every 100 men married in the year 1872 13·7, and of every 100 women 9·9, had been previously married.

The registers of marriage at the central office show that the number of marriages of divorced persons in 1872 was 58, viz., 56 in which one or other of the contracting parties is stated to have been previously divorced, and 2 in which divorced men married divorced women. Of 28 divorced men who re-married, 22 married spinsters, 4 married widows, and 2 married divorced women. Of 32 divorced women who re-married, 21 were married to bachelors, 9 were married to widowers, and 2 were married to divorced men.

The proportional number of *divorced persons* who re-married to every 10,000 persons married was ·61 in the four years 1861–4, 1·00 in the four years 1865–8, and 1·29 in the four years 1869–72.

*Ages at Marriage.*—The ages of the existing married and unmarried population combined with the ages at marriage furnish the means of determining several very important social questions, and the recent enumeration of the ages and conjugal condition of the people enabled us to show, in the report on the recent Census, that the probable duration of the joint lives of husband and wife in England and Wales was 27 years, and that the probable duration of the longest life was 48 years.†

The proportion of children to a marriage is, to a great extent, dependent on the age at which marriage is contracted, and the marriage registers of a nation furnish the means of determining this age. In England and Wales of 201,267 marriages registered in 1872 the ages of both parties were specified in 145,507 instances, about five sevenths of the total number. The mean age at marriage of these 145,507, including the re-married, was 27·9 years for men, and 25·7 years for women.

The proportion of young people who marry has never been so high as during the year under review, and the proportion has been gradually increasing since the commencement of registration. In 1851 in every 100 marriages 5·02 men and 15·75 women were under 21 years of age, while in 1872, 8·00 of the men and 22·32 of the women were minors, but this increasing tendency to early marriage has not affected the mean age at marriage to any appreciable extent, for while the mean age of bachelors in 1851 was 25·8 years, and of spinsters 24·6 years, the ages in 1872 were nearly the same, viz., 25·7 and 24·3 years.

By means of the Census returns relating to the ages and conjugal condition of the people, I am enabled to show the annual rate of marriage at each year of age under 21, in each of the three periods 1850–52, 1860–62, and 1870–72.

\* The number of decrees of divorce pronounced by Her Majesty's Court for Divorce and Matrimonial Causes in the year 1872 was, nisi 107, absolute 133.

† See Census of England and Wales, Vol. IV. General Report, pp. xvii–xx, where it is also shown that the mean age of the married population being 41·85 years, and the mean age at marriage 26·70 years, the mean natural term of existing married life is rather more than the difference between these two results (15·15), viz., 17·63 years.

TABLE A.—**England. Number of Bachelors, Spinsters, Widowers, and Widows at each Year of Age under 21 living in 1851, 1861, and 1871; also the Numbers and Proportions who were Married Annually in each of the THREE PERIODS 1850-52, 1860-62, and 1870-72.**

The Table may be read thus:—In 1861 there were 1,121,155 Bachelors, 188 Widowers, (1,121,343 Unmarried Men,) 1,004,588 Spinsters, 671 Widows, (1,005,259 Unmarried Women,) aged 15 and under 21. The average annual numbers Married in the 3 years 1860-62, aged 15-21, were 10,601 Bachelors, 8 Widowers, (10,609 Men,) 32,389 Spinsters, 50 Widows, (32,439 Women,) being in the proportion of ·946 Bachelors to every 100 living, 4·255 Widowers, (Men Married to every 100 Unmarried Men, ·946,) 2·939 Spinsters to every 100 living, 7·452 Widows, (Women Married to every 100 Unmarried Women, 2·962).

\* The Population at the above Ages has been deduced from the graduated Tables showing the estimated numbers living at each year of age, published in each of the Census Reports of 1851, 1861, and 1871.

† In a certain number of cases the Age at Marriage is not returned; for example: the average annual number of Minors married in the 3 years 1870-72 was 14,888 Men and 41,978 Women, but an abstract of the instances in which the ages of both parties were stated only produced 13,681 Men and 35,732 Women; the ages of one or both of the couples married in the other cases being distinguished in the marriage registers by the terms "Minor," "Under Age," &c. The numbers of Men and Women whose ages were not stated have been proportionally distributed over the different periods of age.

To ascertain the increased disposition to early marriage more accurately the number of unmarried women living under 21 years of age at different periods must be taken into account. This has been done in Table A., and by dividing the average annual marriages of minors by the numbers unmarried at corresponding ages, the result shows that, among men under 21 years of age, marriage was contracted by 7.6 in 1000 living in 1850-52, by 9.5 in 1860-62, and by 11.8 in 1870-72; and that early alliances among women under 21 years of age were contracted by 24.3 in 1000 in 1850-52, by 29.6 in 1860-62, and by 34.1 in 1870-72.

There is therefore, beyond doubt, an increasing tendency to early marriage among the young people of this country.

The proportion which the population, including the army, navy, &c. abroad, at the ages 15 and under 21 bore to the population aged 15 and upwards at each of the three Censuses of 1851, 1861, and 1871 was 18.38, 17.93, and 17.90 per cent., respectively.

Widowers are more inclined to marry than bachelors. By the annexed Table B., showing the average annual rate of marriage in the three years 1870-72 at each of 14 periods of age, it will be observed that this disparity of disposition is most remarkable in old widowers and old bachelors. At ages 35-40, to every bachelor who married 4 widowers remarried; at ages 40-45, 5 widowers remarried to every bachelor who married. As age advances this disparity increases, and at ages 50-55 the relative proportions were 1 bachelor to 7 widowers; at 60-65, 1 bachelor to 8 widowers; and at 65-70, to every bachelor who married 8 widowers remarried. These are marriages out of equal numbers.

Widows also marry in higher proportions than spinsters, thus at ages 15-20, to every spinster who married 2 widows remarried; at ages 20-25 and 25-30 the disparity was not so great, but at ages 30-35, and up to 65, the relative proportions were about the same as at ages 15-20, for to every spinster who married 2 widows remarried.

TABLE B.—**England and Wales. Number of Bachelors, Spinsters, Widowers, and Widows at DIFFERENT AGES who were ENUMERATED at the CENSUS of 1871; also the Average Annual Numbers and Proportions who were Married in the THREE YEARS 1870-72.**

NOTE.—Of the average annual number of marriages in the three years 1870-72, the ages of the males and females were stated only of the following numbers; viz., 118,671 bachelors, 123,424 spinsters, 17,183 widowers, and 12,430 widows. In this Table these numbers have been proportionally raised to the total numbers married under the respective classes.

*Signature of Marriage Registers.*—Now that so much progress has been made in meeting the educational wants of the country, the number of men and women who sign their names in the marriage register will be regarded with increasing interest.

Of the 201,267 marriages in 1872, 39,125 men, or 19·4 per cent., and 52,920 women, or 26·3 per cent., made marks in signing the marriage register, so that only 80·6 per cent. of the men, and 73·7 per cent. of the women who married wrote their names. These results show that out of every 100 marriages, 13·3 men, and 22·5 women, were able to write their names in excess of the numbers in 1841, 30 years previously. The disparity between the number of men and women able to write, though not so great as in former years, is still striking. The ability of the men to write has increased during the last 31 years at the rate of 20 per cent., while that of the women has increased 44 per cent.

The returns of future years will, it may be hoped, afford evidence of still more satisfactory progress, so that the great body of the people of England may no longer lag behind the people of Scotland in elementary education.

Turning to the report of the Registrar General for Scotland just published, relating to the abstracts of 1870, the advantages of the old Scotch system of education over that of England are still apparent. 90 per cent. of the men who married, and 80 per cent. of the women who married in Scotland, signed their names in writing, whereas in England and Wales in 1872 the proportions per cent. who signed in writing were 81 for men, and 74 for women.

The proportions in the different counties and districts show where educational efforts should be more particularly directed. In the counties containing the great centres of mining and manufacturing industries, the proportion of *women* unable to sign was very high; in Lancaster only 62·1 per cent. were able to write their names, in Bedford 64·0, North Wales 64·1, Durham 64·8, West Riding of York 66·2, Cornwall 69·7, Chester 70·1, Nottingham 70·1, Salop 70·6. In some parts little more than half of the *women* who married were able to write, the proportions per cent. being 57·4 in Stafford, 57·6 in Monmouth, and 54·3 in South Wales.

The counties where educational efforts for *men* claim most attention are Monmouth, where the proportion per cent. who signed in writing was 62·6, Stafford 64·0, Bedford 68·9, Hertford 70·2, Suffolk 70·9, South Wales 71·3, Norfolk 72·1, North Wales 72·5, Salop 72·6, Cambridge 73·4, Hereford 75·0, Cornwall 75·5, Hunts 76·2, Wilts 76·4, Bucks 77·1, Durham 77·1, Worcester 77·1, Dorset 77·9, Nottingham 78·1. In London the proportion for men was 91·2, for women 86·1.

*Buildings registered for Marriages.*—The number of these buildings registered in 1872 was 264, bringing up the total number on the register at the end of the year to 6904. Of the 264 registered during the year 3 belonged to Presbyterians, 38 to Independents, 42 to Baptists, 1 to the United Brethren or Moravians, 20 to Roman Catholics, 6 to Unitarians, 111 to the various sects of Wesleyan Methodists, 14 to Calvinistic Methodists, 1 to the Countess of Huntingdon's Connexion, 2 to the Catholic and Apostolic Church, and 26 to other places of worship. For the distribution of the 6904 buildings now on the register, under the various denominations, see Table 9.

*Certified Places of Worship.*—The number of places of meeting certified for religious worship during the year 1872 not being churches or chapels of the Established Church was 607. The number on the register on 31st December 1872 was 19,134. The following is a list of the various titles by which religious denominations have been certified to the Registrar General. The names printed in italics have been added since the publication of the list in the last Report.

Advents.  
Apostolics.

### BIRTHS.

The births registered during the year 1872 amounted to 825,907, and exceeded by 28,479 the births during the previous year. Allowing for increase of population, the birth-rate per 1000 of population was 35·8, or 1·9 above the mean of 35 years. The number of births has never been so high as it is in the year under review, and, with the exception of the year 1868, the proportion to the population has never been so high.

The increase in the rate from 31·6 per 1000 of population, or one birth to every 32 persons living in the five years 1838–42, to 35·3, or one birth to every 28 persons living in the five years 1868–72, is in some measure due to the progress of registration. In former years the birth-rate of England was less, but during the last six years the birth-rate of England has been higher, than that of Scotland, as shown in the annexed statement.

Births to 1000 persons living.

Years.		England.	Scotland.
1867	- -	35·4	35·1
1868	- -	35·8	35·3
1869	- -	34·8	34·3
1870	- -	35·2	34·6
1871	- -	35·0	34·5
1872	- -	35·8	35·0

By the operation of a clause in the Scottish Registration Act registration of both legitimate and illegitimate births within 21 days after birth is enforced by a penalty not exceeding 20s., the penalty not being exacted in cases where it is proved that the neglect to register did not arise from wilful failure. As regards the English Act, the provisions for the registration of births are rather voluntary than compulsory.

A certain proportion of the births that escape registration in England are doubtless illegitimate; but it is to be feared that some thousands of legitimate births also escape registration every year, and I have no expectation of being able to secure the registration of every birth until the parents or other qualified informants are bound under penalties to give the Registrar notice.

On account of the interference of emigration and immigration it is difficult to determine accurately the number of births that escape registration, but it was estimated in the Census Report at 13,614 *annually* in the 10 years 1861-70.

As noted in previous years, the highest birth-rates, in 1872, are observed in the counties of Durham and Stafford, the proportion of births to 1000 of population being 44·0 and 41·9 respectively; the lowest rates, excluding Rutland, where the facts are few, are recorded in the counties of Devon (30·4), Dorset (30·5), and Hereford (30·6).

The recent Census returns confirm previous deductions, and show that counties with a high proportion of married women at the child-bearing ages have the highest birth-rate; thus of every 100 women living at the ages 15-45 in Durham, 59·9 were married, and in Stafford 56·3, while in Devon the proportion was only 45·2, in Dorset 47·0, and in Hereford 47·3. Of every 100 women living in England and Wales, at the ages 15-45, 49·6, nearly half the number, were married.

The Appendix to the Census Report of 1871 contains some interesting results bearing upon this point,\* and shows that in the counties containing the agricultural districts the birth-rate is generally low, while in those counties where the great mining industries of the country are carried on the birth-rate is high; thus the proportional number of legitimate births annually in the ten years 1861-70, to every 100 married women aged 15-55, in the counties of Durham and Stafford, was 25·3 and 24·8 respectively, while in the counties of Devon, Dorset, and Hereford, the proportions were only 21·2, 21·7, and 19·7 respectively.

If the ratio of *illegitimate births* to spinsters and widows aged 15-55 be compared in these counties, the results are nearly equally striking; the average annual number of illegitimate births to every 100 unmarried women being 2·2 in Durham and 2·4 in Stafford, while in Devon, Dorset, and Hereford, the proportions were 1·3, 1·5, and 2·0 per cent.

*Sex.*—The births of 421,307 boys and 404,600 girls were registered in 1872, so to every 100·0 girls 104·1 boys were born. The proportions varied in the different counties: in Bedford (97·6 boys to 100 girls), in Huntingdon (98·6), and in Leicester (99·8), fewer boys than girls were born: the counties in which the largest proportional number of boys was born were, Wilts 107·1, Hants 107·7, Westmorland 108·8, and Hertford 111·4.

Taking the mean of the ten years 1862-71, the highest proportions of boys were in Cumberland, Cornwall, North Wales, Northumberland, and Northampton; the lowest in Huntingdon and Hertford. The smallest numbers fluctuate most, in conformity with a mathematical law.

*Children born out of Wedlock.*—The number of children born, in any country, out of wedlock is not exactly known. Of the 825,907 births registered in England and Wales in the year 1872, 44,766, or 5·4 per cent., were recognised as illegitimate. The mean of the ten years 1862-71 was 6·0. The per-centage of registered illegitimate births to total registered births has declined from 6·7 in the five years 1846-50 to 5·7 in the five years 1868-72, while the marriage-rate has increased, the number of

\* See Vol. IV. Census of England and Wales, 1871.—General Report, Table 81, p. 68.

persons married to every 100 of the population in the seventeen years 1838-54 being 16·3, while the rate in the eighteen years 1855-72 was 17·6.

In those counties which are notorious for a high rate of illegitimacy little or no improvement is observed in the returns for recent years, but a glance at the results for a series of years reveals a striking decrease in the following counties.

	Average Annual Per-centage of Illegitimate Births to Total Births.	
	10 Years 1853-62.	10 Years 1863-72.
Hereford . . . . .	9·2	8·2
Nottingham . . . . .	9·0	8·3
Suffolk . . . . .	8·2	7·3
Leicester . . . . .	7·9	6·9
Chester . . . . .	7·9	6·7
Derby . . . . .	7·5	6·8
Berks . . . . .	7·3	6·3
Cambridge . . . . .	7·3	6·7
Wilts . . . . .	7·0	6·2
Sussex . . . . .	6·8	5·8
Bucks . . . . .	6·7	6·0
Lancaster . . . . .	6·6	5·7
Dorset . . . . .	6·6	5·8
Worcester . . . . .	6·5	5·8
Somerset . . . . .	6·2	5·4
Hants . . . . .	5·8	5·1
Kent ( <i>extra-metropolitan</i> ) . . . . .	5·7	4·9
Surrey ( <i>extra-metropolitan</i> ) . . . . .	4·8	4·1
Middlesex ( <i>extra-metropolitan</i> ) . . . . .	4·6	3·8

The mean number of unmarried women in England and Wales aged 20-40 at the Censuses of 1861 and 1871 was 1,370,178; and the average annual number of children born out of wedlock in the ten years 1861-70 was 45,701, so if the mothers of these children were all of the ages 20-40, then 3·34 in every 100 unmarried women bore children annually; but a certain proportion (about 11·967 per cent.\*) belonged to women under 20 and above 40. Deducting this proportion, it would appear that the number of illegitimate children to unmarried women aged 20-40 was 40,232: so 2·94 in every 100 unmarried women bore children annually, or to every 34 spinsters and widows aged 20-40 one child was born annually.

#### DEATHS.

492,265 deaths were registered in England and Wales in the year 1872, a number less by 22,614 than in the previous year, and less by 23,064 than in 1870. Some of the severe epidemics which so unduly increased the mortality during the last three or four years have subsided, and the year exhibits a comparatively low death-rate, as will be seen by the annexed figures.

Years.	Deaths to 1000 persons living.
1867 . . . . .	21·7
1868 . . . . .	21·9
1869 . . . . .	22·3
1870 . . . . .	22·9
1871 . . . . .	22·6
1872 . . . . .	21·3

The mortality was 1·0 per 1000 below the mean rate of 35 years, and we must refer back as far as the year 1860 to find a death-rate as low as that now recorded.

\* See the 14th Annual Report, p. xiii.

An inquiry into the *causes* of the deaths of the year, by Dr. Farr, —showing which of these have prevailed with mitigated severity—will be found in the Appendix to this Report, pp. 219–229.

The year 1872 will be memorable as the commencement of a new era in the promotion of health and the prevention of certain forms of disease, for one great obstacle to sanitary progress has now been removed by the passing of the Public Health Act. The confusion which existed, prior to its passing, as to who was the responsible *local* authority for sanitary purposes is to some extent removed, and a definite authority upon whom devolves the administration of the laws relating to public health is now designated.

The Act requires that England and Wales shall be divided into sanitary districts designated “urban sanitary districts” and “rural sanitary districts.” The urban sanitary districts to consist of (1) boroughs, (2) Improvement Act districts, and (3) Local Government Act districts, constituted such either before or after the passing of this Act; the *urban sanitary authority* being (1) the Mayor, Aldermen, and Burgesses acting by council, (2) the Improvement Commissioners, and (3) the Local Board, respectively. The rural sanitary districts to consist of Poor Law Unions, the *rural sanitary authority* being the Board of Guardians.

The Act also requires that every sanitary authority shall appoint, as medical officer or officers of health, legally qualified medical practitioners, an inspector or inspectors of nuisances, and other necessary officers.

The working of the Act has to be established and its administrative machinery perfected before we can see its beneficial operation reflected in a marked improvement of the public health. Successful efforts have been made to improve the sanitary condition of some of the large towns, but the great work of removing causes which are so prejudicial to life—arising from overcrowding, want of proper ventilation, bad drainage, and impure water supply—still remains unaccomplished or incomplete in the towns and villages scattered throughout the length and breadth of the land. Town populations are increasing without equivalent sanitary arrangements, and although any improvement is commendable, still, when such arrangements are but partially carried out, and when only spasmodic efforts are made for the removal of agencies unfavourable to health, they cannot be expected to go far in diminishing the general mortality.

When, through experience, the administrative functions of the local officers are less imperfect, and the sanitary works of the country are no longer partial, the good effects of improvements will be as visible in the death-rate of England and Wales as they are in the reduced mortality of some of our large towns since they have been well drained and supplied with wholesome water.

Until such progress has been made, as the town populations are rapidly increasing, there will be no striking reduction in the death-rate of the country.

*Sex and Age.*—Of the 492,265 deaths registered in 1872, 255,135, or 51·8 per cent., were those of males, and 237,130, or 48·2 per cent., were those of females, so the deaths of males were to those of females in the proportion of 108 to 100. More boys than girls are born; but, owing to the emigration of males exceeding that of females, the female exceeds the male *population*. On the supposition that the numbers of each sex living were equal, then the deaths of males to every 100 deaths of females would be 113, but the female population is in excess of the male, and notwithstanding the risks of childbirth the mortality of females is less than that of males, the deaths of males to 1000 males living in 1872 being 22·7, while the deaths of females to 1000 females living was only 20·0. The annual rate of mortality of males is ·6 per 1000 less than the mean of 34 years, and 1·2 per 1000 less than in 1871. In the female rate the reduction is still more striking, the annual rate of mortality

in 1872 being 1·5 per 1000 less than the mean of 34 years, and 1·3 less than in 1871.

There are laws governing the rise and decline of diseases which have yet to be discovered, but the sanitary inquiries which have been carried on in connection with the returns of this office for a period of 35 years have done much to disclose the agents which tend to produce epidemic diseases. In the year 1872 the returns of the causes of death show that diseases of children were for the most part the disorders which assumed anything like an epidemic form; and if it be true that children are always the greatest sufferers from epidemics, and that they suffer in proportion to their low sanitary condition, then the agencies that are prejudicial to childhood merit the deepest study of the sanitary reformer.

Of the 255,135 deaths of males registered in 1872, 105,846, or 41·49 per cent., occurred at ages under 5 years. At ages 5-10 years the proportion was 3·78 per cent., and at 10-15 years it was 2·02 per cent., so that to every 100 deaths of males at all ages nearly one half, or 47·29 per cent., occurred at ages under 15 years. Of the 237,130 deaths of females at all ages, 91,593, or 38·63 per cent., were those of children under 5 years. At ages 5-10 the proportion was 3·80, and at 10-15 it was 2·07; the proportional number under 15 years of age, 44·50, was rather less than that for males.

The rate of mortality per 1000 living in the first five years of life was 67·8 for males, and 58·8 for females; at ages 5-10 years 7·0 and 6·5, and at ages 10-15, 4·2 and 4·0 respectively.

A comparison of the mortality in 1872 with the mean annual rate in the 34 years 1838-71 shows that the reduction in the death-rate is in great part due to a lower rate of mortality among children under 15 years of age, as will be seen by the following results, traceable to the decline of some zymotic diseases. Small-pox, whooping-cough, and diarrhœa, however, were especially fatal to children in the year 1872.

The mortality of females in 1872 was lower than their average at all the periods of life except the last: in men the exception covers the middle period of life; the mortality of men of 25-65 exceeds the average. The mortality at the several ages has to be studied in connection with the causes of death.

*Seasons.*—Great fluctuations in the temperature generally bring about a high rate of mortality, but the meteorological conditions of the year 1872 were favourable to the public health. In the *first quarter* of the year the mean temperature of the air at Greenwich was 43°·6, or 5°

above the average of 101 years, and the rain-fall measured 6·5 inches, or 1·4 inches above the average: owing partly to the clemency of the season the mortality was low, being at the annual rate of 23·5 per 1000 of population, or 1·4 per 1000 below the average of 35 years. In the *second quarter* the mortality was at the annual rate of 21·0 per 1000, or 1·1 per 1000 below the average: the mean temperature of the season was 52°·8, or 0°·5 above the average, but the weather during the quarter was very changeable; the rain-fall at Greenwich was about the average, viz., 5·7 inches. In the *third quarter* the rain-fall was below the average quantity at Greenwich, but in the country generally as much as 10·1 inches fell; the annual death-rate was equal to 20·5 per 1000 of population against an average rate of 20·7: the weather was warm, the mean temperature being 61°·1, or 1°·5 above the average. In the *last quarter* of the year the extraordinary amount of rain which fell—11·3 inches, or 4·2 inches above the average—and the high temperature of 45°·3, or 1°·7 above the average, apparently exercised a beneficial influence on the public health, the annual rate of mortality being only 20·2 per 1000 of population, or 1·7 per 1000 below the average. Detailed information respecting the meteorology and evidences of the registration returns in the four quarters of 1872 is contained in the “Summary of the Quarterly Reports” given in subsequent pages (xxx–xlviii), and in Mr. Glashier’s remarks on pages lvii–lix.

*Locality.*—In reviewing the mortality in different localities the occupations and density of the population, together with other elements, have to be taken into consideration. The results recorded year by year show that a much larger number of deaths in proportion to population occurs in towns than in rural districts; special causes are at work in the denser districts of England and Wales most injurious to life. In the year under review the deaths were singularly below the average in the districts and sub-districts comprising the chief towns; the average annual death-rate among these, in the 10 years 1862–71, was 25·0 per 1000 of population, whereas in the year 1872 it was only 23·4. Turning to the eleven great *divisions* into which the country is divided, two—the North Midland, and the Northern—are observed where the mortality was high, but with these exceptions the mortality was below the average in the 10 years 1861–70 in every division. In Leicester the rate of mortality was above the average by 1·3 per 1000, in Durham by 1·5, in North Wales by 1·6, and in some other counties there was a slight rise in the death-rate. London was much healthier than usual, and the other divisions in which the greatest reduction in the mortality is observed, as compared with the mean annual rate in the 10 years 1861–70, are the South Eastern, North Western, Eastern, South Midland, and South Western. In *Counties* the reduction is greatest in Hereford, where the fall was 3·4 per 1000, Berks 2·8, Hunts 2·5, Gloucester 2·5, Dorset 2·3, Surrey (extra-metropolitan) 2·3, Middlesex (extra-metropolitan) 2·2, Bedford 2·1, Wilts 2·0, and Sussex, Bucks, Oxford, Essex, and Lancaster, each 1·9.

In the “Summary of the Quarterly Reports” subsequently given (pp. xxx–xlviii) will be found detailed remarks upon the sanitary condition of different localities as indicated by their death-rate in each quarter of 1872, together with such conclusions relative to the marriages and births as seemed to be deducible from the observed facts. And with regard to the large cities and towns, of which a selection of seventeen has been made, with London at their head, I have nothing now to add to the comments in the Annual Summary of the Weekly Returns for 1872, hereto appended (pp. xlix–lvi).

*Deaths in Public Institutions.*—It appears that of the total deaths registered in England and Wales in 1872, 42,806, or 8·7 per cent., occurred in 1245 principal public institutions. Of these 42,806 deaths,

27,374, or 64 per cent., occurred in 712 workhouses, 11,638, or 27 per cent., in 450 hospitals, and 3794, or 9 per cent., in 83 lunatic asylums. The large increase (104) in the number of hospitals since last year is chiefly owing to the general erection of Cottage Hospitals throughout the country.

As explained in an introductory note (p. 99) the Table of deaths registered in the principal public institutions situate within the several districts and sub-districts (pp. 100–117) will afford the means of correcting the death-rates, and so will be invaluable for purposes of local inquiry. Obviously, there is great disparity in the facilities the populations of different parts of the country have of access to institutions for the relief of their necessities. In London 16·7 per cent. of all the deaths registered in 1872 took place in workhouses, hospitals, or lunatic asylums, in the South Eastern Counties the proportion was 11·7 per cent., in the South Midland 9·2, in the Eastern 8·2, in the South Western 7·0, in the West Midland 7·8, in the North Midland 6·0, in the North Western 8·2, in Yorkshire 5·6, in the Northern Counties 5·1, and in Monmouthshire and Wales 3·9.

#### PROGRESS OF REGISTRATION.

*Names on the Registers, and Searches.*—The names of all persons whose marriages, births, and deaths, have been recorded in the registers during the last  $35\frac{1}{2}$  years are, for the convenience of public reference, inscribed in alphabetical Indexes deposited at the Central Office.

From the middle of the year 1837 to the end of the year 1865 the Indexes are in *manuscript* and extend over 1,741 volumes. For the years 1866–72, the Indexes are *printed*, and are consequently less voluminous; they comprise only 84 volumes. The 48,759,698 names—of which 1,720,706 were entered in 1872—are, therefore, contained in 1825 volumes. The Index for the year 1872 consists of 12 volumes.

That the public are alive to the increasing utility of the registration of marriages, births, and deaths, may be inferred from the fact that the annual number of searches in the five years 1843–7—exclusive of searches in non-parochial registers, and of searches for purposes connected with the Factory Acts—averaged only 778, whereas in the five years 1868–72, the average annual number was 15,057 at the Central Office. The amount of fees received and paid into Her Majesty's Exchequer for searches and certificates in the year 1872 was 2,867*l.* 5*s.* 6*d.*

For a complete list of all the public registers and records in my custody I refer to my 34th Annual Report (pp. xxi–ii).

#### UNITED KINGDOM.

The enumerated population of the United Kingdom, excluding the islands in the British seas and Army, &c. abroad, at the Census of 1871 was 31,484,661,\* and it is estimated that by the middle of the year 1872 the population had increased to 31,839,260, of which 23,067,835 belonged to England and Wales, 3,399,226 to Scotland, and 5,372,199 to Ireland.

The estimated increase of population in England and Wales, from the middle of 1871 to the middle of 1872 was 285,023, and that of Scotland 31,304, but in Ireland the population continued to be reduced by emigration and the estimated decrease of population in this part of the United Kingdom in the twelve months ending 30th June 1872 was 22,808.

In the year 1872, 78,102 *Irish* emigrants left the Irish ports, being an increase of 6862 over the number in 1871. The diminution in the population of Ireland since 1851 has been caused by emigration alone, no fatal epidemic having prevailed during that period, and the official returns

\* This will be found to differ slightly from the population returned in the 34th Annual Report p. xxiii. owing to the numbers for Ireland, at the date of publication, not being finally revised.

show that not less than 2,162,596 emigrants left Ireland during the period from 1st May 1851—the date when the collection of the returns first began to be made at the several Irish Ports—to 31st December 1872. These numbers include not only emigrants as hitherto understood, but all the Irish who leave their ports to go to England, Scotland, and the Channel Islands.

The registration of marriages, births, and deaths in Ireland continues defective; and the Registrar General of Ireland\* regrets that there is but little improvement in recent years. Notwithstanding the institution of several prosecutions which have been attended with some advantages, he still has to report numerous cases of neglect to register births and deaths. The registration of marriages is also unsatisfactory owing to the clergy in some districts declining to sign the necessary certificates.

The marriage-rate in England in 1872, 17·5 per 1000 of population, is higher than that of Scotland 15·1; the English birth-rate is also higher, 35·8, whereas in Scotland it was 35·0. The respective death-rates were 21·3, and 22·3, the mortality of Scotland exceeding that of England by 1 per 1000.

### THE ARMY.

The returns relating to the British Army for the year 1872—with which I have been favoured by His Royal Highness the Field Marshal Commanding-in-Chief, show that the mortality of the Army at home was below the average, while the mortality of the portion of the Army serving abroad was above the average. The average strength of the Army at home and abroad in 1872 was 192,007, and the number of deaths was 2649, the rate of mortality being 13·8 per 1000, against 12·1 in 1871.

At home, the average strength was 104,154, the deaths were 940, and the rate of mortality per 1000 of mean strength was 9·1 among officers, and 9·0 among non-commissioned officers and men, against an annual average of 10·5 and 11·2, respectively, in the six years 1866–71.

Abroad, the average strength in 1872 was 87,853, the deaths were 1709, and the rate of mortality per 1000 of mean strength was 14·2 among officers, and 19·7 among non-commissioned officers and men, against an annual average of 12·6 and 18·3, respectively, in the six years 1866–71.

### THE NAVY.

The official returns for the year 1872 show that the total force afloat was 46,830, and the deaths 385, so the rate of mortality was 8·2 per 1000. Compared with the previous year this represents a reduction of ·3 per 1000.

The number of deaths from disease was 266, and from wounds, injuries, and drowning 119. The mortality from disease was 5·7 per 1000, and from wounds, &c., 2·5 per 1000, against 6·3 and 2·1, respectively, in 1871.

Out of the 266 deaths from disease, 11 are referred to small-pox, 23 to enteric fever, 53 to consumption, 25 to heart disease, and 31 to pneumonia. In every 100 deaths 30·9, or nearly one-third were from wounds, injuries, or drowning.

The lowest ratio of sickness in 1872 was on the South-east Coast of America; the highest on the Mediterranean Station. Only 4 unimportant cases of scurvy occurred, a rare disease so far as the royal navy is concerned.

The mean force employed in 1872 on the *Home* Station was 23,000, and the deaths were 144, being in the proportion of 6·2 per 1000, and representing a reduction of ·4 per 1000 compared with 1871.

---

\* See the 7th Annual Report of the Registrar General of Ireland recently published, relating to the Abstracts for the year 1870, pp. 14–15.

The annexed Table shows the mortality at the different Stations during the year 1872 :—

STATIONS.	DEATHS per 1,000 Force.			
	In the Year 1872.			Annually in 16 Years.
	From Disease.	From Wounds, Injuries, and Drowning.	Total from All Causes.	Total from All Causes.
Home - - - - -	4.9	1.3	6.2	8.1*
Mediterranean - - - - -	5.8	1.6	7.4	9.9
North America and West Indies - - - - -	6.4	3.1	9.5	17.7
South-east Coast of America - - - - -	7.5	1.5	9.0	16.1†
Pacific - - - - -	4.0	4.5	8.5	9.3
West Coast of Africa & Cape of Good Hope	13.7	2.2	15.9	24.4
East Indies - - - - -	8.6	4.0	12.6	15.3
China - - - - -	2.9	2.6	5.5	35.5
Australia - - - - -	6.3	1.8	8.1	11.7

Total - - - - -	5.7	2.5	8.2	—

\* Including the deaths by the loss of Her Majesty's ship Captain the rate was 9.5.

† Including the deaths by the loss of Her Majesty's ship Bombay the rate was 21.2.

The following Table shows the number of men and boys in the Royal Navy, and the number of deaths from disease and injury in the five years 1861-5, at different periods of age :—

AGES.	Number of Men and Boys enumerated five times in the 5 Years 1861-65.	Number of Deaths in the 5 Years 1861-65.			Deaths per 1000 Strength annually in the 5 Years 1861-65.		
		Disease.	Injury, including Drowning.	Disease and Injury.	Disease.	Injury, including Drowning.	Disease and Injury.
All Ages -	223,135	1,830	971	2,801	8.2	4.4	12.6
15-25 - -	124,361	890	543	1,433	7.1	4.4	11.5
25-35 - -	69,701	555	308	863	8.0	4.4	12.4
35-45 - -	21,059	261	96	357	12.4	4.6	17.0
45-55 - -	5,982	100	17	117	16.7	2.8	19.5
55-65 - -	2,032	24	7	31	11.8	3.4	15.2

From this Table it will be seen that the average annual rate of mortality from disease in the Navy, in the five years 1861-5, increased from 7.1 per 1000 strength at ages 15 and under 25, and 8.0 at ages 25-35, to 12.4 at ages 35-45, and 16.7 per thousand at ages 45-55. The proportional number of deaths from violence is nearly the same at the periods of age 15-25, 25-35, and 35-45.

#### BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

*Marine Register Book.*—By the Act 6 & 7 Will. IV. cap. 86. sections XXI. and XXVI., and by the Merchant Shipping, and Passengers' Acts, it is required that captains or commanding officers of British vessels shall send to me a copy of the particulars touching births and deaths that occur at sea among English subjects, but the particulars of only 73 of such births and 219 of such deaths were reported to me in 1872 and entered in the Marine Register Book at this office, whereas the number of births

and deaths of British subjects at sea reported to the Registrar General of Shipping and Seamen during the year was 289 and 547 respectively.

*Mercantile Marine.*—The Registrar General of Shipping and Seamen reports the number of mariners at sea, exclusive of masters, in the year 1872 to be 203,720. Out of this number 4123 deaths occurred, and though still excessively high, the mortality, 20·2, was below the average of the previous 20 years, 21·1.

The number of mariners in the Merchant Service, exclusive of masters, whose deaths are referred to drowning by accident and by wreck in 1872 was 2297 out of a total force of 203,720: the number of deaths in the Royal Navy from drowning in the same year was 67, out of a force of 46,830, so the respective rates of mortality from this cause of death were 11·3 per 1000 in the Mercantile Marine, and only 1·4 per 1000 in the Royal Navy. There can be no doubt that the dangers of the sea are greatly aggravated by the neglect of required precautions.

### WILLS.

Printed Calendars of all grants of probates and administrations from the year 1858 to the present time, showing the names and descriptions of the testators and intestates alphabetically arranged, together with other particulars, are deposited for public reference at this office.

Mr. Leslie in his annual report of Judicial Statistics for 1872 publishes a return from the Chief Registrar of the Court of Probate, which shows that the number of probates and administrations granted at the Principal Registry during the year was 15,455. The value of the effects was sworn under 63,421,915*l*.

The returns furnished by the district Registrars record the number of probates and letters of administration granted in the 40 district registries during the year as 24,850. The value of the property under which these probates and administrations were sworn was 52,012,993*l*.

The results for the Principal and District Registries combined were—probates and administrations 40,305—value of effects sworn under 115,434,908*l*. The average value for each being 2864*l*. against 2826*l*. in the previous year. The proportion of the cases in which people above the age of 21 left wills, or left estates on which letters of administration were taken was 1 in 6·2, or 16·2 per cent.

### SUB-DISTRICTS OF ENGLAND AND WALES.

The registration of births and of deaths is performed either at the houses of the people or at the offices of the 2,195 registrars. As each informant has to go to the office of the registrar of his sub-district, or the registrar has to go to the house in which the event occurred, it is evident that the size of the sub-district is one important element in the administration of the Act. A second element is the population, for the births and deaths bear a certain though variable relation to the existing numbers. A third element is also important, and that is the mode in which the population is distributed over the area as the population may be dispersed pretty evenly in farms and cottages over a wide area of country, or a dense ward of a city; again it may be, and is often concentrated chiefly in a town, but with wide suburbs, and with open country parishes associated with the town for registration purposes. The original church registration of baptisms and burials, as well as marriages, was parochial; it was performed at the church; so the informants had to go to the registering clergyman, but had not to travel further than the limits of the parish which, however, might be great or small. That system of registration was, as it is well known, incomplete, as regards both births and deaths.

The sub-district was substituted for the parish as the registration administrative area; and containing a variable but an average number of

7 parishes, it increased the distances to be travelled; with this alleviation to the public, but aggravation to the labor of the registrar, that the registration of birth or death might be performed in the house where the event occurred.

There were countervailing advantages: where the registrars were paid by a fee for each event registered, an extensive population might supply them with sufficient employment, and such an income as would command the services of educated men.

The division of the country into sub-districts in the first instance was made by the Poor Law Commissioners and Guardians, apparently without any very definite rule as to size or population; but the general result is, that there are seven parishes on an average to each; that the average area of a sub-district is  $26\frac{1}{2}$  square miles, the average population in 1871 *ten thousand three hundred and forty-seven*: while the average number of persons married in a sub-district in that year was 173, of births 363, of deaths 235. Then the weekly number in an average sub-district was 7 births, and 4 or 5 deaths; making about 11 births or deaths weekly. If the registrars visit every house to register births and deaths, they cannot on *an average* travel more than *two* miles in each case, nor probably much less than one mile unless they arrange to register the births periodically in beats. Their pay is at the rate of a shilling an entry, and 1s. 6d. additional for the first 20 births or deaths.

While the average area and population are as given above, the extremes are very wide from the average. The sub-district of Berwick-street, St. James's, London, comprises only 24 acres ( $0\cdot0375$  mile), while Bellingham in Northumberland, round the tributaries of the North Tyne comprises 175,131 acres (274 square miles).

The annexed Table (A.) shows that 11 sub-districts have less than 1000 inhabitants; and 11 have populations ranging from 71,319 to 123,915. The table shows a striking contrast.

TABLE (A.)—The **11 least** and the **11 most Populous Sub-districts (1871).**

X.	Bellingham	Bellingham	175,131	3,790

Note.—A square mile consists of 640 acres.

As it is evident that both area and population have to be taken into account in forming districts of suitable size, I have shown in the sub-joined Table (C.) the populations of sub-districts of every degree of magnitude.

TABLE (C).—The **Sub-districts of England and Wales, showing their Area and Population.**

[The Mean Area of a Sub-district is 26'566 square miles (=17,002 acres), and the Mean Population is 10,347.]

Mean Distance of Population from Centre, in Miles.	Radius of equi- valent Circle in Miles.	AREA.		Total Sub-dis- tricts.	POPULATION.																
		Square Miles.	Acres.		Under 500.	500— 1000—	1000— 2000—	2000— 3000—	3000— 4000—	4000— 5000—	5000— 10,000—	10,000— 20,000—	20,000— 30,000—	30,000— 40,000—	40,000— 50,000—	50,000— 60,000—	60,000— 70,000—	70,000— 80,000—	80,000— 90,000—	90,000— 100,000 and upwards.

1'57	5'20	80'0-	51,200-	24	-	-	-	-	1	-	8	12	3	-	-	-	-	-	-	-	
1'57	5'50	90'0-	57,600-	18	-	-	-	-	1	1	14	2	-	-	-	-	-	-	-	-	
1'57	6'31	100 & up to 274.	64,000 & up to 175,131.	22	-	-	1	-	5	1	13	2	-	-	-	-	-	-	-	-	

NOTE.—The Table may be read horizontally thus:—Of 475 Sub-districts having an area of 20 and under 30 square miles (=12,800 or less than 19,200 acres), 1 has a Population of under 500; 1 a Population of 500 and under 1,000; 28 a Population of 1,000 and under 2,000; 63 a Population of 2,000 and under 3,000, and so on. Or the Table may be read vertically thus:—Of 900 Sub-districts having a Population of 5,000 and under 10,000, 32 have an Area of less than a square mile; 51 have an Area of 1 square mile and less than 5 square miles; 50 an Area of 5 and less than 10 square miles; and so on.

\* This is the distance if the Population were equally distributed over the area: it is therefore the maximum distance. As the Population is clustered round one or more centres the actual distance is less.

Thus it will be noted that 475 of the sub-districts had an area of 20 and under 30 square miles, equivalent in area to circles with radii ranging from 2·82 to 3·34 miles; that 2 of them had a population under 1000; 244 a population under 5000; 166 a population of 5-10; 54 a population of 10-20 thousand; and 11 a population of 20-30,000.

When a country has once been sub-divided for any administrative purpose in which officers are appointed to distinct portions of territory, any change is attended with some inconvenience, and some disturbance of vested interests. But there can be no doubt that with the experience that has been acquired, a better working division of the country could be made now; so as to retain or secure the services of able registrars, and at the same time to offer the public greater facilities. Thus the sub-districts of 80 square miles of territory, equal to a superficies of 8 by 10 miles are too large; and this is still more the case with sub-districts of 90, 100, and so on up to 274 square miles.

Upon the other hand as regards area, the sub-districts of less than a square mile are below the mark; though many of these very small sub-districts are populous, and five have a population exceeding 50,000.

The large sub-districts of Croydon with 71,319 inhabitants, of Preston with 85,427 inhabitants, including something more than the towns, are conveniently served by one registrar; and the same may be said of the other 9 most populous sub-districts, one of which (Everton in West Derby, near Liverpool) contained in 1871 *one hundred and twenty-three thousand nine hundred and fifteen* inhabitants.

The advantages in towns attainable in ample sub-districts are various; good officers, with due care in the selection can be obtained, as the remuneration is sufficient to pay for the whole of their time, and a place for the registry office can be found in some well known central public building. In the continental cities it is in the Town Hall. As a general rule the largest sub-districts are among those in which the registration is by far the most efficiently performed.

#### FOREIGN STATES.

Through the courtesy of M. V. Falbe-Hansen, Dr. Berg, and M. Von Baumhauer, I am enabled to publish, for the first time, returns of the vital statistics of Denmark, Sweden, and the Netherlands. These interesting returns together with the usual results for other Foreign States will be found in a series of Tables on pp. cxvii-cxxii.

The States are arranged in the order determined by a resolution of the Statistical Congress held at St. Petesburgh in 1873.

The first division represents the North-east of Europe and comprises England, Denmark, Norway, and Sweden; returns from Norway are wanting to complete this division. The Eastern division follows next in order, and is represented by Russia, from which State I hope soon to receive returns. Then follows the Central division comprising Austria (including Hungary), Switzerland, the German Empire, the Netherlands, Luxemburg, Belgium, and France; for this division I have only received returns from Austria, Prussia, the Netherlands, and France. Next in order is the Southern division, comprising Portugal, Spain, Italy, Greece, Turkey, Montenegro, Servia, and Roumania; for this division returns have been received from Spain and Italy. From the United States of America no aggregate returns have been received owing to the regrettable absence of any system of registration under Federal control.

The following Table shows the average annual rates, per 1000 of population, of persons married, births, and deaths in the various States from which returns have been received:—

AVERAGE ANNUAL RATES, PER 1000 POPULATION, IN THE 20 YEARS 1853-72.									
COUNTRIES.	ENGLAND AND WALES.	DENMARK.	SWEDEN.	AUSTRIA.	PRUSSIA.	THE NETHER- LANDS.	FRANCE.	SPAIN.*	ITALY.*
PERSONS MARRIED	16·7	15·9	14·1	17·3	17·1	15·9	15·9	15·1	15·4
BIRTHS - - -	34·8	31·6	32·0	40·2	39·3	34·3	26·1	37·2	37·3
DEATHS - - -	22·4	26·3	29·4	31·9	28·8	25·7	24·4	29·7	30·1

\* The mean annual rates for Spain are for the ten years 1861-70, those for Italy are for the nine years 1863-71.  
NOTE.—See explanatory note at foot of Table 64 accounting for any remarkable increase in the respective rates.

The marriage-rate, as will be seen in the above Table, is highest in Austria 17·3, Prussia 17·1, and England 16·7. It is lowest in Sweden, 14·1; Spain, 15·1; and Italy, 15·4; and the rate is uniformly in Denmark, the Netherlands, and France, 15·9.

The birth-rate is highest in Austria, 40·2; in Prussia it is 39·3, Italy 37·3, and Spain 37·2. In England, with a defective birth registration, it is 34·8, in the Netherlands 34·3, Sweden 32·0, Denmark 31·6, France 26·1.

The recent Census of France in 1872, after the termination of the war, shows a large decrease of population since the previous enumeration in 1866. The diminution is thus accounted for in the French Census Report :—\*

Enumerated Population in 1866	-	-	38,192,064
Ditto ditto in 1872	-	-	36,102,921

	2,089,143
Deduct for loss of territories of Alsace-Lorraine	1,597,238

Decrease of Population in the six years 1866-72	491,905
---	---------

This decrease of population amounting to 491,905 or 1·29 per cent. is mainly attributable to loss of life in the war against Germany, but the report also mentions two other causes, the epidemic of small-pox, which raged in 1870-1, and a decrease in the same years in the number of marriages, and consequently in the number of births. The total loss of population including the territories ceded to Germany is equivalent to 5·47 per cent. If the French increased as rapidly as the English these numbers would be replaced in less than ten years.

It will be seen from the following statement of the numbers, and proportions to population of persons married, of births, and deaths, in France in each of the seven years 1866-72, that after the termination of the war the marriage and birth-rates rose considerably, and the mortality was lower than it had been for some years previous to 1870-1.

## FRANCE.

\* Statistique de la France, Résultats Généraux du Dénombrement de 1872, pp. xv-xvi.

The death-rates per 1000 of population show that the mortality is highest in Austria 31·9, Italy 30·1, Spain 29·7, and Prussia 28·8. It is lowest in Denmark 20·3, Sweden 20·4, England 22·4, France 24·4, and the Netherlands 25·7.

The mortality in the various States is unduly raised in certain years by pestilence and by war. Thus in 1853 Denmark suffered from cholera and the mortality was raised to 24·3 per 1000, the average being 20·3. Sweden also suffered from the same scourge in 1853, 1857, and 1866, when the respective death-rates were 23·7, 27·6, and 20·0, against an average rate of 20·4. In 1866, Austria and Prussia suffered severely from cholera and their respective death-rates were 33·3 and 35·7, against averages of 31·9 and 28·8. Cholera was epidemic in the Netherlands in 1859 and 1866, and small-pox in 1871; the mortality was 31·2, 28·7 and 29·4 respectively, whereas the average rate was 25·7. France suffered from small-pox in 1865-6 and the rate of mortality in those years was 24·3 and 23·3, the average rate being 24·4; small-pox broke out again in France, as has been mentioned above, in the years 1870-1.

Deaths in war also contributed to raise the mortality in Austria in 1866 to 33·3, in Prussia in 1866, 1870, and 1871, to 35·7, 27·6, and 29·8, respectively, and in France in 1870-1 to 28·3 and 34·8.

I have the honour to be,

Sir,

Your faithful servant,

GEORGE GRAHAM,

*Registrar-General.*

---

*Summary of the Quarterly Reports, 1872.**First Quarter.—January, February, March.*

In the UNITED KINGDOM the births of 279,478 children, and the deaths of 185,611 persons of both sexes, were registered in the three months ending 31st March 1872. The natural increase of population was thus 93,867.

The registered number of persons married in the quarter ending March 31st, 1872, was 113,308.

The marriage, birth, and death rates of the Kingdom differ little from those prevailing in England and Wales.

ENGLAND.—The improvement in the prospects of the marriageable population is shown in the increase of weddings in the first quarter of the year, which exceeded the average, and were considerably in excess of the numbers returned in any winter quarter since 1866. The birth-rate was slightly under the average; the death-rate was low both in town and country. The frosts of the last months of 1871 had proved fatal to many old people, who, like the leaves of autumn, are easily shed; and the survivors enjoyed the mild and exceptional winter that followed, so several thousands of them are alive who must have succumbed had the winter been severe. Small-pox became epidemic at the end of 1870 and raged through the following year; it grew excessively fatal in the spring of 1871 and then declined; but in the past winter it was more fatal than before, and 7720 children and others died of the disease. Scarlet fever and fever were less prevalent than they had been; measles and especially whooping-cough became more active and fatal.

*Marriages.*—The number of persons married in the first quarter of the year 1872 was 81,078, or 8468 more than in the corresponding quarter of 1871. The marriage-rate which reached its lowest point, 12·9 per 1000, in the March quarter of last year, rose this quarter to 14·1, a higher rate than has prevailed in any corresponding quarter since 1866, and ·3 above the average rate for the winter quarter in the ten preceding years. A comparison of the number of marriages in each county with the average for the three previous corresponding quarters gives the following results worthy of notice. The greatest increase, in proportion to population, is observed in Monmouthshire, Durham, Northumberland, Northamptonshire, and Warwickshire, and may fairly be attributed to the prosperous condition of the population in those counties employed in coal mines and iron works. Lancashire, Leicestershire, Staffordshire, and the West Riding of Yorkshire show a somewhat smaller but still a considerable increase: while Hertfordshire, Huntingdonshire, Norfolk, Wiltshire, Dorsetshire, Herefordshire, and Lincolnshire, the inhabitants of which are for the most part engaged in agricultural pursuits, so far from sharing in the improvement in the marriage-rate, exhibit a positive decrease in the number of marriages registered.

*Births.*—In the first quarter of 1872, the births of 208,752 children born alive were registered, showing an annual rate of 36·3 per 1000, which is ·8 below the average rate for this quarter of the year. Of the counties, Westmorland, Somersetshire, and Nottinghamshire showed, in proportion to their respective populations, the greatest increase upon the average of the three previous corresponding quarters, and Norfolk, Oxfordshire, and Northamptonshire the greatest proportional decrease.

*Increase of Population.*—The natural increase of the population, or the excess of births over deaths, amounted during the quarter to 73,800, or 811 per day. The actual increase is affected largely by emigration.

The number of emigrants of British origin who sailed from ports in the United Kingdom at which Government emigration officers are stationed, was 25,660; of whom 15,060 were of English, 1942 of Scotch and 8658 of Irish origin. The total number shows a slight excess over the emigration recorded in the corresponding quarter of last year, the increase being for the most part amongst the emigrants of English origin. Of the above 25,660 persons, 22,931 were bound for the United States, 402 for British North America, and only 1103 for the Australian Colonies, against 2134 in the March quarter of 1871.

*Prices, Pauperism, and the Weather.*—The price of wheat showed a further slight decline last quarter, the average quotation being 55s. 4d. per quarter against 56s. 3d. in the previous three months.

The average price of potatoes per ton at the waterside market, Southwark, which in the four quarters of the year 1871 was respectively 87s. 6d., 63s. 6d., 68s. 6d., and 89s. 6d., rose to 100s. in the quarter ending 31st March last.

The price of beef and mutton by the carcase at the Metropolitan meat market averaged 6½d. and 7½d. per lb. respectively. In the year 1852 the average price per lb. of beef was 4½d. and of mutton 4½d. In the year 1854 beef had risen to 5½d., and from that time until 1868 the average price for each year ranged from 5½d. to 5¾d. In the three years 1869, 1870, and 1871 it was 6½d., 6d., and 6½d. respectively. Mutton rose in 1853 to an average price of 5½d. per lb., and ranged between 5½d. and 6¼d. in the following years until 1865, when it reached 7d. In the five succeeding years it ranged from 6d. to 6¾d., except in 1868 when it fell to 5½d. In 1871 it was again 7d., and in the first quarter of 1872, as above stated, 7½d. The increase in price between 1852 and 1872 in the price of beef was 48 per cent. and in the price of mutton 46 per cent.

Upon classifying them according to years in quinquennial periods, there is seen a progressive rise in the prices of both mutton and beef. Beef was never dearer in the London market than it is now; and taking the average of the first five years 1852–56 and the last 1867–71, the rise was 17 per cent.; in the same periods the price of mutton rose 11 per cent. Upon comparing the first with the last ten years, the prices of both meats rose about 9 per cent.; but the prices of wheat and potatoes declined. The price of beef may have been affected by the cattle plague, and the measures of restriction to which it led. Prices too during the whole period have no doubt been enhanced by the depreciation in the value of money circulating in the world. The exorbitant price of butcher's meat might be reduced to some extent by diminishing the consumption, which in many families is excessive; as it is well known that bread, fruit, potatoes, vegetables, and similar diet furnish adequate sustenance to all adults, except to the men employed in severe physical labour, and, among them, agricultural labourers in many counties get little animal food. Greater simplicity in public dinners, where so much food is wasted, might lead to private economy.

Pauperism declined to a considerable extent last quarter. The average number of paupers relieved on the last day of each week was: In-door 149,604; Out-door 777,575. As compared with the winter quarter of 1871, the decrease in the number of paupers receiving in-door relief amounted to 11,364, and in the number of those receiving out-door relief to 101,999. The average numbers for the past quarter were less than in any previous corresponding quarter since 1866.

The warm weather which set in on 13th December 1871, following a period of unprecedented cold, continued with few and slight exceptions till the 18th of March; the mean temperature of these 97 days was more

than  $5^{\circ}$  above their average; then followed 8 days of severely cold weather, in the temperature of which the average daily deficiency was  $7\frac{1}{4}^{\circ}$ ; the remaining five days of the quarter were warm. At the corresponding season in the last 100 years the warmth of the past three months has been but once equalled, viz., in the year 1846, and has never been exceeded. The mean temperature for the quarter was  $43^{\circ}\cdot6$  or  $5^{\circ}$  above the average of 101 years.

The rain-fall during the past quarter amounted to 6.5 inches or 1.4 above the average. In February it was only half the average fall, but in both January and March it was in excess.

*State of the Public Health; Deaths.*—In the first or winter quarter of 1872, ending 31st March, 134,952 deaths were registered in England and Wales; after making due allowance for increase of population, this number was considerably below the average number in the corresponding quarter of recent years, notwithstanding the epidemic of small-pox which showed a somewhat increased and more general fatality.

The annual death-rate was equal to 23.5 per 1000 of the estimated population, against 25.2, the average rate in the first quarters of the ten years 1862–71; the rate in the first quarters of those years ranged from 21.9 in 1868 to 27.5 in 1864. Temperature exercises a more direct influence upon mortality in the first quarter than in other parts of the year. A severe winter invariably produces a high death-rate. The effect of temperature, however, is partially disturbed by the varying fatality of epidemic diseases. In the ten years, 1862–71, the temperature of the three coldest first quarters averaged  $37^{\circ}\cdot5$  Fahrenheit, and the annual death-rate 26.8 per 1000; while in the three warmest first quarters the mean temperature was  $41^{\circ}\cdot8$ , and the average death-rate did not exceed 23.8 per 1000. The mean temperature last quarter averaged so much as  $43^{\circ}\cdot6$ , and but for the somewhat counteracting influence of the small-pox epidemic the death-rate would have been unusually low.

In the Eleven Registration Divisions of England and Wales the annual death-rate ranged from 19.2 and 20.8 in the South-eastern and South Midland to 26.6 and 27.3 in the North-western and Northern Divisions. The deaths registered in each of the Divisions were below the average number in the three previous corresponding quarters, except in Yorkshire and the Northern and Welsh counties; the excess in these three divisions was principally due to the small-pox epidemic.

In the principal town districts of the country, comprising all the large towns, and a population of about 13 millions, the annual death-rate last quarter was equal to 25.4 per 1000. The remaining or rural population is about 10 millions, among whom the death-rate did not exceed 20.9 per 1000. The urban rate was 2.0, and the rural rate 1.7, per 1000 below their average rates in the corresponding quarter of the ten years 1862–71. If from the entire urban population be excluded 68 of the largest towns, for which special information is given in Tables VI–IX, it will be found that the death-rate in the smaller towns last quarter was equal to 25 per 1000. Allowance being made for the excessive mortality from small-pox in town districts, it will be seen that the remarkably mild weather which prevailed during the first three months of this year more favourably affected the town than the country death-rates. This result further confirms a fact which has previously been proved from these returns, namely, that it is town populations which suffer most from the rigors of a severe winter.

The 134,952 deaths from all causes, at all ages, in England and Wales during last quarter included 31,123, or 23.1 per cent., of infants under one year of age, and 32,452, or 24.0 per cent., of persons aged 60 years and upwards. The infant mortality showed a slight increase upon that of the first quarter both of 1870 and 1871, which was 22.6 per cent., while measured by the proportion of deaths under one year to

births registered it was 14.9 per cent. last quarter, against 15.8 and 14.9 in the two previous corresponding quarters. The mild weather exercised a direct influence upon the proportion of the deaths of elderly persons, which, as above stated, did not exceed 24.0 per cent., while in the first quarters of 1870 and 1871 it had been 26.3 and 25.6 per cent. respectively.

To the seven principal diseases of the zymotic class 24,794 deaths were referred in England and Wales during the first three months of this year against 26,997 in the last quarter of 1871; these deaths were equal to an annual death-rate of 4.3 per 1000 of the estimated population, while in the first quarters of 1870 and 1871 the rate from these seven diseases did not exceed 3.6 and 3.8 per 1000 respectively.

The 24,794 deaths from these diseases included 7720 from small-pox, 3121 from measles, 3385 from scarlet fever, 586 from diphtheria, 4699 from whooping-cough, 3544 from different forms of fever, and 1739 from diarrhoea. The fatal cases of small-pox were considerably more numerous than in any quarter since the present epidemic broke out in the latter part of 1870. The deaths from measles were 642 less than the number in the last quarter of 1871, but considerably exceeded the average in the seven previous quarters. The fatality from scarlet fever was lower than in any recent quarter, the deaths from this disease having showed a steady decline from 11,746 in the last quarter of 1870 to 3385 in the first three months of this year. The deaths from diphtheria have varied but slightly in the past nine quarters. Whooping-cough is usually most fatal in the winter quarter of the year, but it was exceptionally fatal in the three months ending March last, causing 4699 deaths against 4451 and 2632 in the corresponding period of 1870 and 1871. The 3544 deaths referred to fever, principally of the enteric or typhoid type, declined from the numbers in the corresponding quarters of 1870 and 1871, which were 4177 and 4073 respectively. The deaths from diarrhoea are never numerous in the first three months of the year.

The continued fatal prevalence of the small-pox epidemic calls for more detailed notice. The deaths from this disease in the first three quarters of 1870 averaged only 450, but in the last quarter rose to 1229; in the four quarters of 1871 they were successively 4903, 7012, 4612, and 6380; last quarter they further rose to 7720, which considerably exceeded the number in any quarter of the past 32 years, and were equal to an annual death-rate of 1.3 per 1000 persons living. Of these 7720 deaths last quarter 1179 were recorded in the three Ridings of Yorkshire, 1075 in the Northern, 900 in the Welsh, 862 in the West Midland, and 831 in the Metropolitan Registration Divisions. The epidemic first became fatally prevalent in London and in the large Lancashire towns; here the numbers of deaths have shown a steady decline in recent quarters. The next most important outbreak occurred in the Northern counties, especially in Northumberland and Durham, and apparently reached its climax in the latter part of last year, as the fatal cases last quarter had considerably declined, although again exceedingly numerous in many town districts of those counties. The deaths from small-pox showed a marked and general increase in each of the eight other Registration Divisions, especially in South Wales. It will be useful briefly to note a few of the places in the different divisions in which the epidemic was most fatal, or in which new outbreaks occurred during last quarter. In the South-eastern counties, 67 deaths from this disease occurred in Dover, and 43 in Portsmouth, while they had declined in Alverstoke. In the South Midland counties the most notable outbreak occurred at Northampton, resulting in 157 deaths against 47 in the preceding three months; Bishop Stortford, St. Albans, Bedford, Biggleswade, Cambridge, and Wisbech also suffered from the disease. The 611 deaths in the Eastern counties included 53 in West Ham, 91 in Yarmouth and Mutford, 273 in Norwich, and 18 in Thetford; the fatality

in Norwich showed a considerable decline in the latter part of the quarter. In the South-western counties Plymouth and the surrounding Districts formed the principal centre of infection in which 233 fatal cases were reported; the epidemic also prevailed in Bridport, Bideford, Redruth, Bridgwater, and Yeovil. Of the 862 deaths in the West Midland counties, 263 were returned in Wolverhampton, which was the first important centre of infection in the Division; these showed a slight decline from the number in the preceding three months, and the violence of the epidemic had considerably abated during March and the early weeks of April; the other towns of this Division in which the disease most severely prevailed were Walsall, Dudley, Stourbridge, Coventry, Wellington (Salop), and to a less extent Bristol and Birmingham. Nottingham was the principal centre of infection in the North Midland counties, in which town 170 of the 588 deaths from small-pox occurred, showing a considerable increase upon the previous quarter; the epidemic also became fatally prevalent last quarter in the neighbouring Districts of Radford, Basford, Mansfield, and Worksop; and also prevailed in Chesterfield, Belper, and Ashby-de-la-Zouch; towards the end of the quarter, and during April, the disease became epidemic in Leicester. In the North-western counties the deaths from small-pox showed a general decline last quarter, which was most conspicuous in Liverpool, Birkenhead and Manchester. In the Yorkshire Division the deaths from small-pox, which had been 69, 98, 129, and 708 in the four quarters of 1871, further rose to 1179 in the first three months of this year; of these, 895 occurred in the West Riding, including 430 and 88 in the boroughs of Sheffield and Leeds, and 63 in Doncaster, 60 in Wakefield, and 48 in Pontefract Districts; of the 169 deaths in the East Riding, 118 occurred in the borough of Hull, and 20 in York district; the 115 in the North Riding included 38 in Scarborough, 36 in Malton, and 18 in Guisbrough Districts, respectively. In the Northern Division the fatal cases which had been 1566 and 1546 in the two preceding quarters declined to 1075 in the three months ending 31st March last, of which 781 occurred in the county of Durham, 262 in Northumberland, 32 in Cumberland, while Westmorland was the only one of the English counties in which no death from small-pox occurred; in Durham county the epidemic, although still fatally prevalent in the mining districts, showed a general decline, especially in Sunderland, South Shields, and Gateshead, but in Auckland District the fatal cases rose from 105 in the last three months of 1871, to 199 last quarter; in Northumberland the decline was general, but most marked in Newcastle and Tynemouth; the deaths from this cause in Cumberland were principally confined to Cockermouth and Wigton, and showed a decline upon those in the preceding three months. In the Welsh Registration Division, including the county of Monmouth, the fatal small-pox cases, which had been 141 and 539 in the two preceding quarters, rose to 900 in the first three months of this year; of these, 334 occurred in Monmouthshire and 420 in Glamorganshire, so that the number in the rest of South and North Wales did not exceed 146; Bedwelty and Newport Districts in Monmouthshire, and Merthyr Tydfil, Neath, and Pontypridd in Glamorganshire, suffered most severely from the epidemic; in other parts of Wales the disease was prevalent in Crickhowell, Holywell, St. Asaph, and Carmarthen.

The annual death-rate from small-pox in England and Wales during the first three months of this year was, as before stated, equal to 1.3 per 1000 of the estimated population, against 1.1 in the last quarter of 1871. In the 18 largest English towns, the 2585 fatal cases were equal to an average annual rate of 1.6 per 1000; while in 50 other large towns 1296 deaths from small-pox occurred, or equal to 2.1 per 1000. In England and Wales, exclusive of these 68 large towns, which are now estimated to contain a population of about 9,000,000 persons, the deaths from small-pox last quarter were therefore 3839, or equal to an annual rate of nearly

1 per 1000 of a population of rather more than 14 millions. The following are a few of the highest death-rates from small-pox per 1000 persons living during last quarter :—among the 18 largest cities and boroughs, 13·5 in Norwich, 9·3 in Wolverhampton, 7·7 in Nottingham, and 7·0 in Sheffield ; among the 50 other large town districts, 12·8 in Northampton, 9·8 in Newport (Monmouth), and 7·6 in Dover ; in other town registration sub-districts, 23·8 in Bideford, 15·2 in Tredegar, 14·9 in Bridport, 14·5 in Bishop Auckland, 14·0 in Cadoxton, 13·5 in Radford, 12·8 in Castleford, 12·4 in Malton, 12·0 in Yeovil, and 11·9 in Llantrisant.

With regard to the distribution of the fatal cases of the other zymotic diseases it may be briefly remarked that measles was proportionately most prevalent in London, Staffordshire, Lancashire, Durham, and the West Riding of Yorkshire ; the districts of Bolton and Cardiff showed excessive numbers. Although the deaths from scarlet fever were less numerous than in recent quarters, the disease was more or less epidemic in parts of Staffordshire, Lancashire, the West Riding of Yorkshire, Durham and Cumberland ; Wolstanton, Stoke-upon-Trent, Bury, Burnley, Todmorden and Whitehaven were among the districts which suffered from exceptional prevalence of this disease. The deaths from whooping-cough were exceptionally high last quarter, and the disease was especially fatal in London, Liverpool, Manchester, and West Bromwich. The death-rate from fever was considerably lower than in recent corresponding quarters, but, as usual, showed an excess in the manufacturing districts of Lancashire and Yorkshire ; in Nottinghamshire the deaths from fever had considerably declined from the high number returned in the last three months of 1871, but they were again excessive ; the fatality from fever was exceptionally high in the borough of Sunderland and in Strood (Kent), Whitechurch (Hants), Radford, Yarm, and Llanelly sub-districts. A considerable reduction in the death-rate from fever has occurred in recent years, and has been especially conspicuous in London. There is little doubt but that this result is directly due to an increased efficiency in sanitary supervision. When the whole country shall have been brought under the organised control of sanitary authorities we may hope for a still more strongly marked decline in the fatality from zymotic diseases. So long, however, as the appointment of health officers, even in large towns, is optional, and so long as rural districts are not formed into organised sanitary districts, it is almost futile to hope for a more rapid decrease of the waste of life from these causes which is continually occurring around us.

During the three months ending 31st March last 6193 deaths in England and Wales, or 4·6 per cent. of the total deaths were registered upon the information of the coroners, being inquest cases, against 6789 and 6910 in the corresponding quarters of 1870 and 1871. The deaths referred to different forms of violence during last quarter were 3885, and corresponded with the number in the first three months of 1871 ; the proportion to total deaths was 2·9 per cent.

In the large public institutions of England and Wales, including workhouses, hospitals, and public lunatic asylums, 12,058 deaths were recorded last quarter against 13,394 in the corresponding period of 1871 ; the proportion was 8·9 per cent. of the total deaths, while in the first quarter of 1871 it was 9·7 per cent. ; this decrease occurred principally in the deaths in workhouses, and was due to the mild weather which favourably influenced the death-rate among elderly people.

*Second Quarter.—April, May, June.*

In the UNITED KINGDOM the births of 279,543 children, and the deaths of 165,933 persons of both sexes, were registered in the three months

ending 30th June 1872. The natural increase of population was thus 113,610.

The registered number of persons married in the quarter ending 30th June 1872, was 124,664.

The marriage, birth, and death rates of the Kingdom differ little from those prevailing in England and Wales.

ENGLAND.—The marriage-rate of the spring quarter of the year has been high, and thus implies that the country has been prosperous. Though the prices of the necessaries of life have risen, or rather though the value of money has fallen, it has not interrupted the progress of the workmen engaged in manufactories, mines, and trades, as their wages have also risen. The births of the April, May, and June quarter were an average number: the deaths were below the average. Although small-pox still prevailed and whooping-cough was fatal, there was a general abatement of deaths from zymotic disease, and notably from scarlet fever and from fever. Thus the returns present generally favourable results; the community has been comparatively healthy and prosperous. Still much remains to be done in the supply of pure water and of pure air; and in the arrangements for the purification of both town and country.

*Marriages.*—In the second quarter of the year the number of persons married was 100,760, or marriage went on at the annual rate of 17·5 per 1000 living. The increase upon the previous corresponding quarter was 3098 in the number of persons married, and ·4 in the marriage-rate. This increase was unequally distributed amongst the eleven Registration Divisions, the numbers in the North-western and Northern Divisions having largely exceeded their averages for the corresponding quarter in the three previous years, while the excess in the South-eastern and South-western Divisions was very slight. Of the counties, Northamptonshire, Monmouthshire, Bedfordshire, Staffordshire, Durham, Cheshire, Leicestershire, Lancashire, and Westmorland, showed the greatest proportional increase. A decline was exhibited in Berkshire, Buckinghamshire, Cambridgeshire, Devonshire, Herefordshire, and North Wales.

*Births.*—In the second or spring quarter of the year 1872, the births of 208,790 children born alive were registered. The increase upon the number registered in the corresponding quarter of the previous year was 7625. The birth-rate was 36·3 per 1000, which is identical with the average rate for the spring quarter in the ten preceding years, but ·8 above the rate for the June quarter of 1871. Compared with the average number in the second quarter of the three previous years, the number of births in each of the eleven Divisions showed an increase, such increase being proportionally greatest in the Northern and least in the South-western Division. In the county of Durham the number of births was 14 per cent. above the average; in Dorsetshire it was 3 per cent. below the average.

*Increase of Population.*—The excess of births over deaths amounted to 87,955 in the three months, being at the rate of 967 per day. This large natural increase of population was, however, to a considerable extent counterbalanced by emigration, 89,213 persons of British origin having sailed during the quarter from ports at which emigration officers are stationed. Of these 89,213 emigrants, 40,423 were English, 9168 Scotch, and 39,622 Irish; in the second quarter of 1871 the number of British emigrants was but 83,399.

*Prices, Pauperism, and the Weather.*—A slight rise occurred in the price of wheat, the average price per quarter being 56s. 8d. in the three months ending 30th June last, against 55s. 4d. in the previous three months. In the corresponding quarter of 1871 the average price was 59s. 9d.

Potatoes were dear, the average price per ton at the Waterside Market, Southwark, being 137*s.*, or 73*s.* 6*d.* per ton higher than at the same period of last year.

The upward tendency in the price of meat still continued. The average prices of beef and mutton, by the carcass, at the Metropolitan Meat Market were 6<sup>3</sup>/<sub>4</sub>*d.* and 7<sup>3</sup>/<sub>4</sub>*d.* per lb. respectively, showing a further rise of <sup>1</sup>/<sub>4</sub>*d.* per lb. in each kind of meat upon the high prices which prevailed in the previous quarter.

The returns of pauperism were again favourable, showing a decline in the number both of in-door and out-door paupers. The average number of those receiving in-door relief on the last day of each week in the quarter was 134,422, a smaller number than in any corresponding quarter since 1867, and of those receiving out-door relief 724,792, or less than in any corresponding quarter since 1861.

The weather during the quarter was very changeable; periods of excessive and deficient temperature alternated. The mean temperature in April was 2°·3 in excess of the average in 101 years. In May it was 1°·7 below the average, the nights being especially cold. In June the weather was again warm, the mean temperature being 1° above the average. The mean temperature of the whole quarter was 52°·8, or 0°·5 above the average. The lowest reading of the barometer during the quarter was 28·9 in. on 21st April, and the highest 30·3 in. on 6th of the same month. Heavy thunderstorms occurred about the middle of June.

The rain-fall of the quarter at Greenwich was 5·7 in., and was almost identical with the average in 57 years; of this, one inch fell in April, 3·1 in. in May, and 1·6 in. in June. The fall in May was almost an inch in excess, while it was below the average in both April and June.

*State of the Public Health; Deaths.*—In the second or spring quarter of 1872, ending 30th June, 120,835 deaths were registered in England and Wales; after making due allowance for increase of population this number showed a decline from those returned in the corresponding periods of the three years 1869–70–71. But for the continued and general fatal prevalence of small-pox the mortality during last quarter would have been unusually low. The annual death-rate was equal to 21·0 per 1000 of the estimated population, against 21·8, the average rate in the ten previous corresponding quarters; in the second quarters of those ten years 1862–71 the death-rate ranged from 20·2 in 1868 to 24·2 in 1866.

In the eleven Registration Divisions of England and Wales the annual death-rate last quarter ranged from 17·0 and 17·8 per 1000 respectively in the agricultural counties of the South-eastern and Eastern Divisions, to 23·7 in Yorkshire and 23·8 in the North-western counties, Lancashire and Cheshire. The deaths returned in the three months ending June were below the average numbers for the three previous corresponding quarters in London and in Divisions 2, 3, 4, and 5; an excess was, however, shown in the Midland, Northern, and Welsh Divisions, where the greatest fatality from small-pox occurred.

In the chief town districts of England and Wales, comprising a population of 13 millions of persons, the annual death-rate last quarter was equal to 22·6 per 1000. In the remaining and principally rural population of about 10 millions, the death-rate did not exceed 18·8 per 1000. The urban rate was 0·8 and the rural rate 1·0 per 1000 below the average rates in the corresponding quarter of the ten years 1862–71. Only twice in these ten years (in 1867 and 1868) was the urban death-rate in the second quarter of the year so low as during the three months ending last June; in the second quarter of 1868 the rural death-rate was 17·4 per 1000, but with this exception the rate in this portion of each of the ten years 1862–71 was higher than that which prevailed last quarter.

The 120,833 deaths in England and Wales during last quarter included 27,351 or 22·6 per cent. of infants under one year of age, and 28,466 or 23·6 per cent. of persons aged 60 years and upwards; each of these proportions showed a slight increase upon those which prevailed in the corresponding quarter of last year. Infant mortality measured by the proportion of deaths under one year of age to births registered was 13·1 per cent., against 13·4 and 13·3 in the two previous corresponding quarters.

The seven principal diseases of the zymotic class caused 19,336 deaths in England and Wales during the three months ending June last, against 18,120 and 21,420 in the second quarters of 1870 and 1871; of these 19,336 deaths last quarter 6521 were referred to small-pox, 2530 to measles, 2206 to scarlet fever, 475 to diphtheria, 3415 to whooping-cough, 2745 to fever, and 1744 to diarrhoea. It is worthy of remark that, excluding the fatal cases of small-pox, the deaths resulting from these principal zymotic diseases were 12,815 last quarter, against 17,674 and 14,408 in the corresponding periods of 1870 and 1871. The 19,336 deaths from the seven diseases were equal to an annual rate of 3·4 per 1000 of the estimated population, against 3·2 and 3·8 in the two previous corresponding quarters.

Small-pox is still a fatal and prevailing epidemic in England and Wales. During the ten years 1860-69 the annual deaths from this disease ranged from 7684 in 1864 to 1565 in 1869; and the average quarterly number in the ten years was 873. Last quarter the fatal cases were 6521, a decline it is true of 1199 from those in the first quarter of the year, but with one other exception a higher number than were returned in any quarter of the past 31 years; they were equal to an annual rate of 1·1 per 1000 persons living. The present epidemic, which was first severely fatal in London and Liverpool, reached its climax in those town districts early in 1871, since when it has steadily declined; but with few exceptions all the large towns in each of the Registration Divisions have since suffered more or less severely. Norwich and Ipswich have experienced severe epidemics in the Eastern counties; Plymouth, Portsmouth, Southampton, and Dover in the South; Wolverhampton, Nottingham, Leicester, Northampton, and Dudley in the Midland counties; Sheffield, Auckland, Durham, Newcastle-upon-Tyne, Sunderland, and Tynemouth in the Northern counties; and Tredegar, Newport, Merthyr Tydfil, Swansea, and Neath in Monmouthshire and Wales. Each of these places has in turn become, what may be termed, a centre of infection, from which the disease has spread to smaller towns and rural districts within a large radius, until the epidemic has been more or less felt in all parts of England and Wales. The divisional totals of deaths from small-pox last quarter showed a decline upon recent quarterly numbers in all parts of the country except in the South-eastern counties, and in the 6th and 7th Divisions including most of the Midland counties; in each of the other Divisions the maximum fatality from the epidemic would appear to have been passed. Of the 1483 deaths from small-pox in the 6th Division last quarter, 1028 occurred in Staffordshire, including 489 in Dudley, and 344 in Walsall registration Districts; the fatality from the disease was also very severe in the parish of Kingswinford in the District of Stourbridge. The increased fatality in the 7th Division was principally confined to Leicester, Ashby-de-la-Zouch, and Basford Districts; in Ashby-de-la-Zouch the epidemic was most fatal in Whitwick sub-district, which, it will be remembered, suffered from a severe epidemic of enteric fever during the summer of 1871; of 154 deaths from small-pox in Basford District, 44 occurred in Greasley sub-district, and no less than 81 in the parish of Bulwell, which at the recent Census did not contain a population of more than 4276 persons. In South Wales the epidemic showed in-

creased prevalence last quarter, especially in Pontypridd and Merthyr Tydfil Districts, in which 419 fatal cases were reported, against 241 in the first quarter of the year; the fatality, however, had considerably declined in Neath, and also in the county of Monmouth.

The 2530 deaths referred last quarter to measles in England and Wales showed a slight further increase upon the numbers returned in the corresponding quarters of 1870 and 1871; a large portion of this increase occurred in London and the West Riding of Yorkshire, the disease being very fatal in Bradford; local epidemics of measles also appear to have prevailed in Croydon, Rickmansworth, Alverstoke, and Saltash. Scarlet fever was severely epidemic during 1870, and caused 11,746 deaths in the last quarter of that year, since which the quarterly numbers have rapidly declined, and the 2206 fatal cases returned last quarter were considerably below the number registered in any quarter since the end of 1869; this decline has been general throughout the whole of England and Wales, but the disease was severely epidemic last quarter in Burnley, Dukinfield, and Todmorden, and sharp outbreaks also occurred in many smaller towns and villages, among which may be mentioned Cranbrook, St. Albans, Handborough (Oxon), Wolverton, Ampthill, Bilston, Boston, and Holyhead; these outbreaks could doubtless be traced to defects in the sanitary condition of these places, which should be discovered and remedied. The fatality from diphtheria, which usually rises or falls with that of scarlet fever, was below the average last quarter. The 3415 deaths referred to whooping-cough, although showing a decline of 1284 from those returned in the preceding three months, showed an excess of more than 1200 upon the number in the second quarter of 1871; the fatality from this disease was general, but the proportionally largest excess occurred in London, where 959 deaths were referred to it against 518 in the corresponding three months of 1871. The deaths from diarrhoea last quarter were lower than in the second quarters either of 1870 or 1871; this was probably due to the moderate temperature which prevailed during May and the greater part of June. From simple cholera, or choleraic diarrhoea, 33 deaths resulted, against 26 in the second quarter of 1871. Concerning the principal zymotic diseases, it only now remains to add a few remarks upon the fatality from the various forms of continued fever in England and Wales last quarter. Mortality from fever affords undeniable evidence of an unsatisfactory sanitary condition. It is gratifying therefore to find that the deaths referred to fever, which in the second quarters of 1870 and 1871 had been 3524 and 3269, further declined to 2745 last quarter; compared with the numbers in the three months ending 30th June 1871, those returned last quarter showed a decline in each of the Registration Divisions, except the fourth, containing the Eastern counties. In London, where the sanitary superintendence is perhaps somewhat in advance of the greater part of the country, the decline in the death-rate from fever has been rapid and continuous in recent years. Staffordshire, the manufacturing districts of Lancashire and Yorkshire, and the mining population of the Northern counties still, however, show excessive rates from fever. In the sub-district of Ashton-in-Makerfield (Wigan) 12 deaths from fever were returned last quarter, in addition to 14 from measles, raising the total deaths to 87 in a population of 7463 (at the 1871 Census) against an average of 45 in the three preceding corresponding quarters. Fever was also exceptionally fatal in Walsall and Bilston, and small local outbreaks occurred at Whitechurch (Hants), Bradford (Wilts), and Camelford. So long as any portion of the country, whether urban or rural, is allowed to remain without the control of intelligent sanitary organization and supervision, will this waste of life from fever, and other forms of zymotic disease, be continually reported. The force of public opinion in recent years has done much to improve the sanitary condition of many of our large towns, in spite of the rapidly increasing difficulties arising from the

sewage and water problems; in the smaller towns and villages, however, the same progress has not been made, and it is to their formation into working sanitary districts that we must look for any considerable amelioration in their condition.

During the three months ending 30th June last, 6155 deaths in England and Wales, or 5·1 per cent. of the total deaths, were registered upon the information of the coroners, being inquest cases, against 5807 and 5908 in the second quarters of 1870 and 1871. The deaths referred to different forms of violence during last quarter were 4027, or 3·3 per cent. of the total deaths; in the corresponding period of 1871 the number was 3926, or 3·2 per cent. of the deaths from all causes.

In the large public institutions of England and Wales, including workhouses, hospitals, and lunatic asylums, 11,005, or 9·1 per cent. of the total deaths, were recorded; in the second quarter of 1871 the number of these deaths in institutions was 12,144, or 10·0 per cent. of the total deaths; this decrease principally occurred in the workhouses, and was probably in great measure due to the general decline of pauperism.

### *Third Quarter.—July, August, September.*

In the UNITED KINGDOM the births of 264,879 children, and the deaths of 155,295 persons of both sexes, were registered in the three months ending 30th September 1872. The natural increase of population was thus 109,584.

The registered number of persons married in the quarter ending 30th September 1872, was 122,232.

The marriage, birth, and death rates of the Kingdom differ little from those prevailing in England and Wales.

ENGLAND.—The marriage-rate, which had fallen to a low ebb three years ago, rose after the winter of 1871, and in the last summer quarter ending in September was considerably above the average; the young took a cheerful view of their prospects, and many new families were founded by marriages. The birth-rate of the three months of July, August, and September exceeded the average of the season; and the death-rate was low both in town and country. So the Public Health is growing more satisfactory, and leads us to hope for still further improvement from more effectual sanitary measures. The disasters of the floods and of excessive rain-falls are more than compensated by the better water supply. Against the consequences of the loss of a portion of the potato crop some provision should be made by the supply of vegetables, or of acids, otherwise scurvy may prevail.

*Marriages.*—In the quarter ending 30th September 1872, 99,636 persons were married, or 6564 more than in the corresponding quarter of 1871. The annual rate was 17·1 per 1000 against 16·2 in the September quarter of 1871, the average rate for the third quarters of the ten years 1862–71 being 16·3. The mining districts of Durham and Monmouthshire, as was to be expected, again showed the greatest proportional increase upon the average number of marriages for the three previous corresponding quarters. In Huntingdonshire, Essex, Bedfordshire, Northumberland, Cumberland, Staffordshire, and the extra-metropolitan part of Middlesex, the increase was also large. The marriages in Wiltshire and Herefordshire were 11 and 16 per cent. respectively below the average for the third quarters of the three previous years. The counties of Kent (extra-metropolitan), Sussex, Dorset, Somerset, Worcester, Rutland, and Westmorland also exhibited a decrease. In London the increase was equal to 8 per cent.

*Births.*—In the quarter ending 30th September 1872, 201,746 births were registered, or 8475 more than in the September quarter of 1871. The birth-rate was 34·7 per 1000, or 1·0 higher than the rate in the

previous corresponding quarter, and  $\cdot 6$  higher than the average rate for the summer quarter in the ten preceding years. In each of the eleven Divisions, except the South-western, the number of births was greater than the average for the third quarter in the three previous years. The greatest excess was again shown in the Northern Division, particularly in the county of Durham. In Essex, also, the births largely exceeded the average.

*Increase of Population.*—The excess of births over deaths during the 92 days was 82,819, or at the rate of 900 daily. The counteracting force of emigration, however, diminished the effect of this natural increase of population, 56,778 persons of British origin having sailed during the three months from ports at which emigration officers are stationed. Of these 56,778 emigrants, 36,135 were English, 5,309 Scotch, and 15,334 Irish. The destination of 42,060 was the United States, of 9534 British North America, of 3587 the Australian colonies, and the remaining 1597 were distributed amongst other places.

*Prices, Pauperism, and the Weather.*—There has been for some time a marked general rise of prices. The price of wheat again rose slightly, the average for the three months being 58s. 11d. per quarter, against 56s. 8d. in the previous three months. In the corresponding quarter of 1871 the average price was 57s. 9d.

Potatoes (best Regents) averaged 119s. per ton at the water-side market, Southwark, being 50s. per ton dearer than in the September quarter of last year.

A further rise occurred in the price of meat. The average price of beef, by the carcass at the Metropolitan Meat Market, was 6 $\frac{3}{4}$ d., and of mutton 7 $\frac{1}{2}$ d. per lb. In the previous quarter the average prices were 6 $\frac{3}{4}$ d. and 7 $\frac{3}{4}$ d. respectively.

Pauperism continued to decline. The returns for the past quarter, when compared with those for the quarter ending 30th September 1871, show a decrease of 5645, or 4·3 per cent. in the average number of indoor paupers, and of 87,897, or 11·4 per cent. in the average number of out-door paupers, relieved on the last day of each week.

The weather during the whole quarter was changeable. The mean temperature in July, notwithstanding a cold period which lasted from the 8th to the 18th, was 3°·4 above the average, the warmest period in the whole quarter being the 11 days from the 19th to the 29th July, during which the average daily excess of temperature was 7°·9. The first half of August was cold and wet, but during the latter part of that month and the early part of September the temperature was higher, though the weather was unsettled. From the 17th September to the end of the quarter rain fell generally and the daily temperature was deficient. The most remarkable feature of the quarter was the frequency of thunderstorms. In July they were prevalent from the 6th to the 14th, and from the 21st to the end of the month; in August from the 5th to the 12th, and from the 21st to the end of the month; in September from the 2d to the 6th, and from the 19th to the 29th. In consequence of the changeable weather the hay harvest was not completed in July, and the heavy rains and frequent thunderstorms seriously interrupted the progress of the corn harvest in August and September.

The rain-fall of the quarter at Greenwich was only 6·5 inches, and 0·8 in. below the average in 57 years. It was nearly the average in July, exceeded it by 0·3 in. in August, and was 1 in. deficient in September. The rain-fall in the country generally was 10·1 inches; the largest excess occurring in the districts north of latitude 52°. In Salford as much as 16·5 inches fell.

*State of the Public Health; Deaths.*—In the third or summer quarter of this year, 118,927 deaths were registered; these were 1132 below

the average number in the corresponding three months of the three years 1869-70-71, without taking into account the increase of population. The annual death-rate was equal to 20.5 per 1000 of the estimated population, against 21.1 the average rate in the third quarters of the ten years 1862-71; in those years the summer death-rate ranged from 18.0 and 19.9, in 1862 and 1867, to 23.7 in the remarkably hot summer of 1868.

In the eleven Registration Divisions of England and Wales the annual death-rate last quarter ranged from 16.1 and 16.9 per 1000 in the agricultural counties of the South-western and South-eastern Divisions, to 23.9 and 24.0 in the principally manufacturing counties of the York and North-western Divisions.

Among rather more than 13 millions of persons living in the chief town districts of England and Wales the annual death-rate was 23.1 per 1000, while in the remaining and principally rural population of about 10 millions the death-rate did not exceed 17.0 per 1000. The urban rate was 0.7 and the rural rate 0.5 per 1000 below the average rates in the corresponding quarters of the ten years 1862-71. Only in 1862 and 1867 of the above ten years was the English urban death-rate so low during the third quarter of the year as it was in the three months ending September last; the rural rate was lower in the third quarters of 1862, 1867, and 1869 than it was last quarter.

The 118,927 deaths in England and Wales included 36,615 or 30.8 per cent. of infants under one year of age, and 24,250 or 20.4 per cent. of persons aged 60 years and upwards; the proportion of infant mortality was almost identical with that which prevailed in the third quarter of last year, while that of elderly persons showed an increase of 1.0 per cent. To each 100 births registered last quarter 18.1 deaths of children under one year of age were recorded; the proportion was 20.0 and 19.4 per cent. respectively in the corresponding periods of 1870 and 1871.

The seven principal diseases of the zymotic class caused 27,428 deaths, against 33,963 and 31,388 in the third quarters of 1870 and 1871; of the 27,428 deaths, 2953 were referred to small-pox, 1267 to measles, 2423 to scarlet fever, 406 to diphtheria, 2503 to whooping-cough, 3195 to different forms of fever, and 14,681 to diarrhœa. These 27,428 deaths, of which more than half resulted from diarrhœa, principally infantile, were equal to an annual rate of 4.7 per 1000 persons estimated to be living, against 6.0 and 5.5 in the two previous corresponding quarters.

The fatality from diarrhœa, which is directly influenced by the temperature and rain-fall, may be said in the present day to govern the rate of mortality during the summer or third quarter of the year. The fatality from diarrhœa reached its maximum at the beginning of August, somewhat earlier than usual, owing to the hot weather which prevailed at the end of July; the temperature during the latter part of the quarter was below the average, and the fatality from diarrhœa declined rapidly. The 14,681 deaths reported from diarrhœa during the three months ending September were equal to an annual rate of 2.5 per 1000 persons estimated to be living, against 3.1 and 2.8 respectively in the third quarters of 1870 and 1871. In the 18 large English towns furnishing weekly returns the death-rate from diarrhœa averaged 4.4 per 1000, in the 50 other large towns ranking next in size it was 3.5, and in the whole of England and Wales exclusive of these 68 towns the rate did not exceed 1.5 per 1000. From these figures it is evident that the fatality from diarrhœa is far more excessive in urban than in rural populations; in the agricultural counties of the South-western Division, for instance, the diarrhœal death-rate was only 0.9 per 1000, while it was 3.9 per 1000, or more than four times as great, in the manufacturing counties of Lancashire and Cheshire forming the North-western Division. According to the proportion which prevailed in 1870, 11,862 or 80.8 per cent. of the total deaths from diarrhœa were of infants under two years of age; these deaths therefore exercised an

important influence upon the infant mortality. In presently considering the variations in the death-rate from diarrhoea in the several towns, it will appear that the prevailing branches of industry in some of the principal town centres exercise some effect upon this fatality.

To simple cholera, or choleraic diarrhoea, 471 deaths in England and Wales were referred last quarter, against 527 in the corresponding three months of last year; of these 163 occurred in London.

The epidemic of small-pox, which has prevailed so severely since the latter part of 1870, caused no less than 23,126 deaths during the four quarters of 1871, and 7720 and 6521, respectively, in the first two quarters of the present year. During the three months ending 30th September last the fatal cases of this disease further declined to 2953; this reduced number, however, showed a considerable excess, as the average quarterly number during 1870, notwithstanding a marked increase in the last quarter, did not exceed 655. The deaths from small-pox showed a large decrease upon the numbers returned in recent quarters in each of the Registration Divisions, but Oxfordshire, Dorsetshire, and Westmorland are the only counties in which no fatal case was reported in the three months. In Cornwall and Cumberland the deaths from small-pox showed an increase upon those in the preceding three months, owing to a greater fatality in Penzance and Whitehaven. The other principal places in which the mortality from small-pox was still excessive last quarter were Portsmouth, Dover, Ipswich, Dudley, Whitwick, and Ystradfydwg (Glamorganshire).

The deaths referred to measles, scarlet fever, and diphtheria were below the numbers returned in either of the two preceding corresponding quarters; the fatal cases of whooping-cough, which had been excessive in the first two quarters of the year, declined in the three months ending 30th September, although the 2503 deaths from this disease exceeded the numbers returned in the corresponding quarters of 1870 and 1871. The 3195 deaths referred to different forms of fever, although exceeding by nearly 500 the number in the second quarter of this year, were lower than those in the third quarters of 1870 and 1871, which were 4635 and 3362 respectively. The mortality from fever has considerably declined in England since 1865, when it was at the rate of 1·1 per 1000 persons living; last year it was less than 0·7 per 1000, and the returns for this year show a further considerable decrease. This decline in the death-rate from fever is satisfactory evidence of decided sanitary progress.

The fatality from zymotic diseases is naturally greatest in the large town centres, where it is fostered by over-crowding, impure air, and impure water. In 18 of the largest English towns the annual death-rate from the seven principal diseases of this class (including diarrhoea) was equal to 7·0 per 1000; in 50 other large, but smaller, towns it was 6·1; and in the whole of England and Wales, exclusive of these 68 towns, the rate was only 3·5. It must always, however, be borne in mind that very many of our smaller towns and villages exhibit in their death-returns the results of an unfavourable sanitary condition, which it is to be hoped will, when the sanitary organization contemplated by the recent Public Health Act shall be completed, stand a fair chance of improvement. Till now many small towns and villages have been entirely without any sanitary authorities, and epidemic diseases have at frequent intervals levied their fatal contributions from the inhabitants, without attracting more than passing local attention. A glance through the sub-district returns in the present Quarterly Return will show that measles was unusually fatal in Brentford and Carnarvon; scarlet fever in Rye (Sussex), Steeple Bumpstead (Essex), Bishop's Castle (Salop), and Aberystwith; St. Austell suffered from whooping-cough, and South Hinksey (Berks) from diphtheria; fever, principally of the enteric type, was fatally prevalent in Liskeard (Cornwall), Hawkesbury (Gloster), Hucknall (Notts), and Ovenden township near Halifax. The most remarkable outbreak of

zymotic disease in the quarter was the epidemic of scarlet fever in Oldham, which resulted in 264 deaths within the registration district of that name, including 217 within the municipal borough; the severity of the epidemic has but slightly abated since the end of the quarter.

During the three months 6209 deaths in England and Wales, or 5·2 per cent. of the total deaths, were registered upon the information of the Coroners, against 5526 and 6032 in the corresponding three months of 1870 and 1871. To different forms of violence 4331 or 3·6 per cent. of the total deaths were referred in the three months; in the corresponding period of 1871 the number was 4202, or 3·5 per cent. of the deaths from all causes.

In the large public institutions, including workhouses, hospitals, and lunatic asylums, 9301 or 7·8 per cent. of the total deaths were recorded; this is the lowest number of institution deaths returned in any quarter since the third quarter of 1870, and is doubtless partly due to the marked decline in the fatality from small-pox, which has since the latter part of 1870 considerably swelled the numbers of deaths both in hospitals and workhouses. The decline of pauperism has also doubtless contributed to the decrease in the workhouse deaths.

#### *Fourth Quarter.—October, November, December.*

In the UNITED KINGDOM the births of 270,172 children, and the deaths of 158,744 persons of both sexes, were registered in the three months ending 31st December 1872. The natural increase of population was thus 111,428.

The registered number of persons married in the quarter ending 31st December 1872, was 147,718.

The marriage, birth, and death rates of the Kingdom differ little from those prevailing in England and Wales.

ENGLAND.—The marriage-rate has completely recovered from the depression of the year 1869, and through all the quarters of the year 1872 exceeded the averages of previous years. Births, which had fallen off in 1871, rose again, and exceeded the average number in the year 1872, and notably in its Christmas quarter. The mortality for the year was lower than in any of the last twelve years, and in the Christmas quarter the deaths were only nine in ten of the average number. The reduction of the mortality was greatest in the cold quarters of the year, when the temperature was higher than usual, in the town districts where sanitary improvements have made some progress, and in the sensitive class of acute zymotic diseases. Not only did the population suffer less from small-pox, but also less from measles and diphtheria. Whooping-cough showed some inclination to activity, but fever declined, and scarlet-fever, the plague of the young, failed to reap its accustomed harvest of children. The sickness from these diseases probably declined nearly as much as the deaths. The higher night temperature and the abundant rain-fall undoubtedly contributed to the diminution of the death-toll of the kingdom.

*Marriages.*—The marriages in the fourth quarter of the year 1872 were more numerous than in any preceding quarter, 121,060 persons having been married in the three months ending 31st December last. The marriage-rate was 20·8 per 1000 persons living, or 0·9 above the mean rate for the fourth quarter in the ten years 1863–72: during those years it was exceeded only once, namely, in the December quarter of 1865. Compared with the average numbers for the corresponding quarter in the three previous years, the marriages in the counties of Monmouth and Durham again showed the greatest increase. In Bedfordshire, Northamptonshire, Cumberland, Nottinghamshire, the East Riding of Yorkshire,

and Northumberland the numbers also largely exceeded the average, while Westmoreland, Herefordshire, and Devonshire exhibited a considerable decrease. A comparison, however, with the numbers of marriages registered in the corresponding quarter of 1871 is less favourable, as an actual decrease is shown in London and in 16 of the counties, while in seven other counties the numbers are nearly identical with those returned for the previous corresponding quarter. In most of these 23 counties the population is engaged principally in agriculture, but among them are also included the counties of Cornwall, Gloucester, Worcester, Warwick, and Cheshire, which contain several populous mining and manufacturing districts.

*Births.*—The births registered in the quarter ending 31st December last were 206,619, exceeding the number in the fourth quarter of 1871 by 13,150. The birth-rate, 35·5, was higher than in any previous corresponding quarter, and 1·5 above the average rate for the December quarter in the ten years 1862–71. The increase over the average for the three previous corresponding quarters was again much greater in Durham than in any other county; of the remaining counties the largest increase was shown in Warwickshire and Lancashire. Shropshire was the only county in which the births were below the average, but the increase in Devonshire, Herefordshire, and Lincolnshire was very slight. The average birth-rate in the eighteen towns furnishing weekly returns was 37·3, or 1·9 above the rate for the whole of England and Wales. In London the rate was only 35·1. Four others of these towns showed lower birth-rates, the lowest being 32·5 in Norwich. In all the thirteen other towns the rates exceeded the general rate for England and Wales, the highest rate being 48·2 in Sunderland. In the fifty towns ranking next in order of magnitude the average birth-rate was 37·2 per 1000, or nearly the same as in the eighteen towns; the rates in the several towns ranging from 25·8 in Bath and 26·2 in Cheltenham, to 49·5 in Gateshead and 51·7 in Wigan.

*Increase of Population.*—In consequence of the high birth-rate and the low death-rate in the quarter, the natural increase of the population was large, the excess of births over deaths amounting to 89,068. Emigration, however, was also more active than is usual in the last quarter of the year, 37,855 persons of British origin having sailed during the three months from ports at which emigration officers are stationed, against 30,753 in the last quarter of 1871. Of these 37,855 emigrants, 25,032 were English, 3,144 Scotch, and 9,679 Irish. The destination of 26,716 was the United States, of 2,311 British North America, of 5,712 the Australian colonies, and the remaining 3,116 were distributed amongst other places. Since 1868 English and Scotch emigrants have increased so as greatly to exceed the Irish in number.

*Prices, Pauperism, and the Weather.*—The high prices of the principal necessities of life were still maintained. Wheat averaged 57s. 3d. per quarter, or 1s. a quarter more than in the corresponding period of 1871. The average price per ton of potatoes (best Regents) at the Waterside market, Southwark, was 170s. or nearly double the average price in the three months ending 31st December 1871. Beef was slightly dearer and mutton slightly cheaper than in the previous quarter. The average price of beef by the carcase at the Metropolitan meat market last quarter was 6½d. and of mutton 7½d. per lb. In the quarter ending 30th September the average prices per lb. were 6½d. and 7½d., while in the December quarter of 1862 they were 5½d. and 6d. respectively.

The returns of pauperism again showed a considerable decline, compared with those for the December quarters of 1870 and 1871. The average number of in-door paupers relieved on the last day of each week during the quarter was 138,662 and of those receiving out-door relief 675,644,

or 6 and 29 per 1000 respectively of the total population. In the previous corresponding quarter the numbers were 141,027 and 759,666 respectively; the decrease of in-door paupers being equal to 1·7 per cent. and of out-door paupers to 12·4 per cent.

Till the 24th October the weather was cold, the average deficiency of daily temperature being  $3\frac{3}{4}^{\circ}$ . Then followed a warm period till the 9th November, with about an equal average daily excess of temperature. From the 10th to the 19th November was a cold period during which the average daily deficiency was  $5\frac{1}{4}^{\circ}$ . A period of 14 days warm weather succeeded, in which the average daily excess was  $6^{\circ}$ , followed by 16 days of changeable weather from the 3d to the 19th December, after which an extraordinarily warm period set in on the 20th, and continued to the end of the year. During this last period the average daily excess of temperature was more than  $9^{\circ}$ . The mean temperature in the whole quarter was  $45^{\circ}\cdot3$ , or  $1^{\circ}\cdot7$  above the average of 101 years. In October it was  $1^{\circ}\cdot8$  in defect, and in November and December  $3^{\circ}\cdot0$  and  $3^{\circ}\cdot8$  respectively in excess. The most remarkable feature of the weather during the quarter was the frequency and abundance of rain. Rain fell at Greenwich on 67 out of the 92 days, a greater number than in any previous corresponding period since 1815. In Guernsey rain fell on 80 days, and at Stonyhurst in Lancashire on every day in the three months except two. The total fall was large, amounting at Greenwich to 11·32 inches, a quantity which has only once been exceeded during the corresponding period in the last 57 years, namely in 1821, when the fall was 11·47 inches. Last quarter between latitudes  $50^{\circ}$  and  $51^{\circ}$  the rainfall averaged about 16·5 inches, and 15·5 inches between latitudes  $54^{\circ}$  and  $55^{\circ}$ . The excess over the average of 57 years was 1·5 inches in October, 0·6 in November, and 2·1 in December.

*State of the Public Health; Deaths.*—In the fourth or autumn quarter of last year 117,551 deaths were registered, or 12,002 less than the average number in the corresponding three months of the three years 1869–70–71, uncorrected for increase of population. The annual death-rate was 20·2 per 1000, and 2·2 per 1000 below the average rate in the fourth quarters of the ten years 1862–71. During the 35 years 1838–72 the death-rate in the last three months of the year has only twice been lower than in the quarter ending 31st December last; in 1845 the rate was 19·1, and in 1856 20·0. In the other years of this period the annual death-rate in the December quarter ranged upwards to 24·1 in 1858 and 25·5 in 1846.

In the eleven Registration Divisions the annual death-rate last quarter ranged from 16·2 and 17·8 in the agricultural counties of the South-eastern and South-western Divisions, to 23·8 and 22·5 respectively in the North-western and York Divisions, comprising the manufacturing districts of Lancashire and Cheshire, and of Yorkshire.

In the chief town districts, containing a population estimated at rather more than 13 millions, the death-rate was 22·2 per 1000, while in the remaining and principally rural population of about 10 millions the death-rate did not exceed 17·6 per 1000. The urban rate was 2·9, and the rural rate 1·2 per 1000 below their average rates in the corresponding quarters of the ten years 1862–71; in the December quarters of those years the lowest urban rate was 23·9 in 1867, which was 1·7 above the rate for last quarter, while the rural rate in 1867 was 17·7, and nearly corresponded with last quarter's rate. It is evident that the generally high temperature and abundant rain during the last three months of 1872 exercised a more beneficial influence upon the public health in town than in rural districts. A hard winter is most fatal among the dwellers in towns, who suffer from the extremes of poverty; and abundant rain not only mechanically cleanses the streets and sewers, but purifies the atmosphere and carries off zymotic exhalations which generate disease. Although the remarkably low death-rate in town districts last quarter may

be principally due to the somewhat unusual meteorological conditions which prevailed, it may be safe to assume that a portion of the improvement in their health is permanent, and is the result of the general awakening to the importance of sanitary measures which has been so conspicuous in the last few years.

The meteorological influence on the mortality at different ages appears to have been unequal. Of the total deaths 24.0 per cent. were of infants under one year of age, and 25.4 per cent. of persons aged 60 years and upwards; hence 50.6 per cent. were of children and adults between one and 60 years of age against 55.1 and 53.2 per cent. respectively in the last quarters of 1870 and 1871. The proportion both of infant mortality and of deaths of elderly persons to the total deaths was larger than in the fourth quarters of either 1870 or 1871. The deaths of infants under one year of age to births registered last quarter were 13.6 per cent., against 14.4 and 15.7 in the corresponding periods of the two preceding years. It is evident, therefore, that the largest proportional decrease in the mortality occurred among children and adults between one and 60 years; and from the very marked decline in the fatality from zymotic diseases which must next be noticed, it appears all but certain that the proportional saving of life was greatest among children between one and 10 years of age.

The seven principal diseases of the zymotic class caused only 16,794 deaths, against 25,907 and 26,997 in the fourth quarters of 1870 and 1871; of these 16,794 deaths, 1665 were referred to small-pox, 1341 to measles, 3701 to scarlet fever, 525 to diphtheria, 2182 to whooping-cough, 4023 to different forms of fever, and 3357 to diarrhoea. The deaths from these seven diseases were equal to an annual rate of 2.9 per 1000 of the population against 4.6 and 4.7 in the two previous corresponding quarters. The recent epidemic of small-pox was exceptional, and therefore interferes with the value of these figures for comparison. The deaths reported from measles, scarlatina, diphtheria, whooping-cough, and fever, which were 21,629 and 16,554 in the last quarters of 1870 and 1871, further declined to 11,772 in the three months ending December last. The decline in the fatal cases of these five zymotic diseases from the numbers in the fourth quarter of 1871 was equal to 29 per cent., while the decrease in the deaths from all causes did not exceed 13 per cent.

The fatal cases of small-pox, which had been 7720, 6521, and 2953 in the three first quarters of 1872, further declined to 1665 in the last three months of the year; this was the smallest quarterly number since that in the three months ending December 1870, in which the late epidemic first appeared and caused 1229 deaths. In each of the Registration Divisions, except the South-western, the deaths from small-pox showed a further decline from those in the three preceding quarters of 1872; the 1665 last quarter included 94 in Hampshire, 116 in Cornwall, 292 in Staffordshire, 180 in Worcestershire, 142 in the West Riding of Yorkshire, and 76 in Cumberland, while in the other counties the numbers were comparatively inconsiderable. The following figures point out the principal centres of infection in those counties in which small-pox was fatally prevalent last quarter; the fatal cases in Portsmouth were 85, Helston 62, Penzance 37, Newcastle-under-Lyme 31, West Bromwich 80, Dudley 138, Stourbridge 86, Worcester 54, Rotherham 34, York 31, Cockermouth 21, and Whitehaven 52.

The deaths from measles, scarlet fever, and diphtheria have not recently been so few in any quarter as during the last three months of 1872. The deaths from measles were 1341 against 1881 and 3763 in the last quarters of 1870 and 1871; those from scarlet fever and diphtheria 4226 against 12,629 and 5133; the fatal cases of fever further declined from 5364 and 4692 to 4023; while those of whooping-cough, although showing a

decrease upon the number returned in the last quarter of 1871, somewhat exceeded those in the same period of 1870. Although the fatality from these diseases had generally declined, an examination of this return in detail will show that local outbreaks of more or less severity occurred in different parts of the country; among others the following instances may be noted. Measles was fatally prevalent in Northampton, Banbury, Norwich, Hinckley, and Carnarvon; scarlet fever in Chesham, Salisbury, Fowey, Bath, Bishops Castle, Oswestry, Bilston, Sedgley, Hayfield, Runcorn, Radcliffe, Oldham, Whitehaven, Aberavon, Aberystwith, and Tregaron. Fever frequently shows the greatest proportional fatality in the small towns and villages, and the present return affords many examples of the truth of this fact; it is impossible however here to do more than to name a few of the cases of the prevalence of fever that arrest the attention in glancing through the local returns:—Battle, Wellingborough, Kettering, Barking Town, Wellington (Somerset), Stapleford, Glossop, Rotherham, Kimberworth, Mexbrough, Kirkleatham, and Llanelly. Outbreaks of fever may invariably be regarded as due to the presence of zymotic poison, which it is the duty of sanitary organization to remove.

The deaths from the seven principal zymotic diseases in England and Wales were equal as before stated to an annual rate of 2·9 per 1000 persons living. In the 18 large English towns the rate from these same diseases was 3·4 per 1000, and in 50 other large but smaller towns it was 3·3; in England and Wales, exclusive of these 68 towns, the zymotic rate was 2·6 per 1000. As these 68 towns include most of the densest town centres, and a population of nearly nine millions, the fact that there the zymotic rate so slightly exceeds the rate for the whole of England and Wales is a marked proof of sanitary progress. When the smaller towns, villages, and rural districts shall all have been brought within the influence of sanitary organization the rural rates may again compare as favourably with urban rates, as they did before the recent improvement in the health of large towns was inaugurated.

During the three months 6500 or 5·5 per cent. of the deaths in England and Wales were registered upon the information of the Coroners, against 4·9 and 4·8 per cent. in the corresponding quarters of 1870 and 1871. The deaths referred to different forms of violence were 4117, or 3·5 per cent. of all the deaths; in the corresponding three months of 1871 the violent deaths were 4048, or 3·0 per cent. of the deaths from all causes. In workhouses, hospitals, and lunatic asylums 10,136 or 8·6 per cent. of the total deaths were recorded; the proportion in the corresponding quarters of 1870 and 1871 was 8·4 and 8·6 per cent. respectively.

---

*Health of London and other large Cities in 1872.\**

THE Great Cities of the world are every year growing greater. Vienna and Berlin have increased rapidly. Paris, for reasons too obvious and deplorable, has remained nearly stationary since the war; but the population amounted at the last Census to 1,851,792, and the capital of France is, after violation by a mob in the face of her enemies and of her own citizens, still the Queen of continental cities. Rome is to be no longer a city of ruins for poets to sigh over, but the living capital of the Italian nation, in sisterly union with Florence, Naples, Turin, Milan, and Venice. In no land, however, are the cities greater than in the English Empire. The cities of India are flourishing. The United States are emulating the land of their origin. But England maintains its ascendancy; and her capital is the greatest the world ever saw. Babylon, Thebes, Rome were never so populous as London, which has now within its widest boundary upwards of *four million* souls; and had in the middle of 1872, within the limits of the Weekly Tables, 3,311,298.

It is evident that the population of its capital must bear some proportion to the population of the empire, and to the population of the States with which it is in relation. Thus the population of Berlin exceeds the population of St. Petersburg; for though Russia covers a larger area, and has more people than Germany, they are in less intimate relation. And Paris is more populous than the German cities because it has long been the capital of a united nation, in intimate connection with its provinces and with the surrounding States of Europe. While London is the metropolis of a great Empire, with which, as well as with the other States of Europe, America, and Asia, it is kept in intimate connection by means of the mercantile marine, the navy, and the telegraphs. It is the treasury of the wealth and of the mind of a large portion of the world.

Cities are the radiating centres of civilization. And in English cities many economical as well as social advantages are enjoyed; these advantages, too, have undergone no diminution in recent years, otherwise the increase could not have gone on, without their inhabitants exhibiting signs of deterioration, of which no trace exists in the returns. But there is a limit to the growth of every city, as there is a limit to the growth of organic forms; though the extension is neither so definite in space nor in time as it is in species, inasmuch as the growth of cities depends upon the multiplication of coexisting or successive individuals, subject to death indeed, but endowed with surplus powers of reproduction. Some of the canons of the law of limitation are self-evident: a city, for instance, is limited by its water-supply, by its supply of food, by its supply of fuel, by its security from enemies within or without, by its powers of purchasing various requirements, by the attractions it offers in competition with the attractions of other places, and the prices at which these attractions can be purchased. London, in the midst of other centres, attracts and repels various kinds of population in various degrees, and its resident population at a given moment is the result of the equilibrium established at that moment between the various conflicting forces.

The estimated increase of population in the year 1872 was 44,839; and the registered births exceeded the deaths by 46,307 in Registration London.

One cause of the limitation of cities in past ages obtained less attention than it deserves; it is the necessity of removing the daily waste to the atmosphere outside, to the soil or to the sea. The smoke of fires, the dust of workshops, the breath of living things, and all their excretions, are noxious in various degrees. London, with impure wells and without

---

\* Reprinted from the "Annual Summary" for 1872.

sewers, was a city of plagues up to the seventeenth century, and was called in the eighteenth century one of the graves of the nation. The removal of impurities is now carried out to some extent, with the best effect; but difficulties increase, and new engineering agencies have to be brought into the field. The demand, in truth, for new methods of saving and invigorating life is as urgent as the demand for new implements of human destruction.

There is, physically, a limit to the number of people that can live on a given space; in crowds they are in each other's way, and in crowded homes poison each other. The limit varies. London, unlike Venice, has no practical limit of area. As far as houses are concerned, by adopting the system of vertical superposition in stories, so prevalent in the continent and even in some towns of Scotland, the cubical dwelling space on the same area may be augmented; but happily that system has not hitherto prevailed in England. Lofty houses, throwing dark, damp shadows on the streets, each with a common staircase, by which impurities are distributed to many families, however grand to look at, can scarcely fail to be unhealthy to live in.

The population in England is less than one person to an acre of ground; in twenty of the great towns of the United Kingdom the population to an acre is 29, in London within the limits of the Weekly Tables it is 42. But the population is very unevenly distributed over the London area of 78,080 acres: for while, in the large Districts, the persons to an acre are in Lewisham, for instance, 5, in Woolwich 10, Wandsworth 11, the proportions run up to 200 in Holborn, 219 in St. Giles, and 237 in Westminster. In some of the sub-districts the density of population is still greater: in Berwick-street Westminster (St. James), in St. Andrew Eastern, and Whitecross-street Holborn, there are 429, 410, and 418 persons to an acre. 150 persons to an acre in London is, however, a limit beyond which the density of population has not been extending during the last ten years; and in denser districts there has been a tendency of the population to decrease.

The population has decreased in St. George Hanover Square, in Westminster (St. James), and in Marylebone—in all the central districts about the City, in Holborn, the Strand, and St. Giles—in Shoreditch, Whitechapel, and St. George-in-the-East: where the density, if we exclude the river area and the Parks, exceeds the above standard of density.

That the London area is not yet covered is evident from the fact, that if the whole area except the river had a uniform density of 150 persons to an acre, the population would amount to 11,304,300. That such a limit will ever be touched is not probable, as the difficulties of healthy habitation increase with the numbers. Such difficulties are for a time evaded by the residence of householders in the suburbs during the night, and of their families there during day and night. But as the outlying districts, with a few exceptions, although supplied with water, remain imperfectly provided with sewers, or with any other effectual means of removing impurities, this state of things cannot continue without danger, with a population outside the sewerage area running up to a million. Unless the London municipal area be promptly extended so as to include the whole of this outer population, the evils will accumulate to an extent with difficulty reparable.

The worst consequences were apprehended from the increase of London in the reigns of Elizabeth and James I., and an attempt was made to prevent the growth of the capital; but it was in vain, and London grew to its present dimensions in spite of all discouragements, and in spite of the exclusion of nearly the whole of its population from the advantages of municipal institutions: the State ever of old playing the part of a mother that neglects and starves the first born of her children; taking no

pride in its beauty or its growth, but, as if it were not her own, or were her rival, expending her affection on alien objects. Those architectural triumphs, the Tower of London and St. James's Palace, were, exclusive of Westminster Hall, the chief State buildings of the capital until Somerset House was erected. Indeed, London owed its chief ornaments to the Church until quite recently; when a few years of restricted powers of self-government have already given the Metropolis, in addition to its bridges, the grand Thames Embankment, and a vast system of trunk sewers, which, to be complete for the purposes of salubrity, only have to be supplemented by effective branches in communication with every house. The Houses of Parliament, the new Government Offices, the new Courts of Law, and the new Post Office, promise better things; but will London ever rival Athens or Rome in its architecture? Will it find its Pericles?

It is a well-established law that, other things being equal, the insalubrity of a place increases with the density of its population; and that the fevers generated in crowded dwellings have a tendency to spread among the whole of the population. The State, therefore, while it has no right to prevent people in any numbers settling in or near London, has a right to prescribe such conditions of residence as are required in the interests of Public Health.

What is at the present hour especially wanted is the breaking down of the restricted barriers of London, and the extension of municipal organization to the well-considered boundaries laid down in Sir Robert Peel's Metropolitan Police Act, which seems to have taken the prospective increase of population into account: any narrower boundary, while the population is increasing within the great circle at the rate of 75,000 annually, could only be temporary, whereas it is desirable to make the change once for all, or for at least the next hundred years. And it is evident that within this limit the water supply, the drainage, the lighting, the house regulations, and all other municipal regulations, should be under the supreme control of one Municipality, with a great administrator at its head.

The state of things now is, that a small population on 668 acres in the centre, enjoys under a Lord Mayor the old municipal form of government; that 3,266,987 persons on 78,208 acres are living under the Local Management Act, with a paid chairman; and that outside this region 618,654 people, increasing rapidly every day in numbers, are spread over 366,097 acres of land, without sewers, except in a few places, but covered by the Metropolitan Police administration.

If the whole of the people amounting in 1871 to 3,885,641 on a circle with a radius of 15 miles can be administered for police purposes from Scotland Yard, can they not be associated together in one community for the purposes of local government, with the City for the central point of its administration? A city is a Co-operative Society for the supply of common wants; and as the police now discharges the duties of defence which were formerly left to householders, and to parish constables; as common sewers carry away impurities which were formerly got rid of by each householder; so water, light, and perhaps heat, and force to a certain extent, may be provided by a sound municipal organization; in fact, almost every commodity in universal demand which can either only be supplied under monopolies, or be supplied imperfectly under competition. Under this head naturally fall the conditions of healthy existence.

#### THE GREATEST LONDON\*; OR THE METROPOLITAN POLICE DISTRICT.

In this London on the Thames, including all the parishes partly or wholly within a circle of 15 miles (=14.9 miles) round Charing Cross,

\* For population of London within its several boundaries see Census of England and Wales, 1871, Vol. ii. p. 38.

the mean density of population in 1872 was 9 to an acre; and the annual rate of mortality was 20·8 per 1000. In the 10 years 1861-70 the annual rate was 23·6, in 1871 it was 23·7. The outer ring includes 11 entire districts, with parts of 5 districts; or 44 entire sub-districts; where the mean density of population is expressed by 1·8 persons to an acre, and the mortality was at the rate of 17·5 in 1872, against 19·3 in the 10 years 1861-70, and 19·0 in 1871.

The mortality of the Registration London, at the rate of 24·3 per 1000 during the 10 years, was one-fourth part higher than the mortality in the outer ring; the difference in the annual deaths was 5 deaths in 1000 living. In 1872 the advantages remained in favour of the outside districts, where the population has more air to live in, but the difference in the two rates declined from 5 to 4 in 1000. This is shown in the annexed table:—

ANNUAL RATES OF MORTALITY per 1000.

	Ten Years 1861-70.	1871.	1872.
In the Metropolitan and City Police Districts -	23·6	23·7	20·8
In Registration London - - - -	24·3	24·6	21·5
Outside Registration London - - -	19·3	19·0	17·5

The rates of mortality in the several Districts varied from 15 to 29 per 1000 for the ten years 1861-70, so far as the mortality can be now determined. The deaths in the large hospitals being omitted, the mortality in the other Districts is somewhat understated.

DISTRICTS and SUB-DISTRICTS within the METROPOLITAN and CITY POLICE DISTRICT, arranged in the ORDER of MORTALITY from the lowest to the highest.

(The Districts containing the large Hospitals and Lunatic Asylums are excluded, also Four Sub-districts for other reasons.)

AVERAGE ANNUAL DEATH-RATE per 1000 in the 10 years 1861-1870.			
6. Hampstead - - - 15·3	39. Richmond - - - 19·1	19. Mile End Old T <sup>a</sup> - - 23·4	
27. Lewisham - - - 16·2	24. Wandsworth - - - 19·5	18. Stepney - - - 24·8	
40. Bromley (Kent) - 16·4	125. Brentford - - - 20·1	5. Marylebone - - - 25·1

123. Staines - - - 17·6	1. Kensington - - - 20·8	15. Bethnal Green - - 25·7	
38. Kingston - - - 18·1	9. Hackney - - - 21·0	14. Shoreditch - - - 25·8	
126. Hendon - - - 18·4	25. Camberwell - - - 21·4	26. Greenwich - - - 26·4	
128. Edmonton - - - 18·5	4. Westminster (St. James) 21·8	20. Poplar - - - 27·0	
37. Croydon - - - 18·8	23. Lambeth - - - 22·1	10. St. Giles - - - 27·4	
		17. St. Geo. in the East 28·6	

Note.—The Districts numbered up to 28 inclusive are in Registration London; the rest are in the Outer Ring.

### THE LONDON OF THE WEEKLY TABLES, 1872.

In this year of mild temperature, and great rain-fall, the mortality, which was 21 on an average, varied from week to week: represented by a curve, the mortality had two maxima (26) in the cold second week of January, (27) in the hot first week of August; and two minima, the first (17) in the last week of June, and the second (17) in the third week of September.

Thus the winter and summer diseases prevail most, respectively in the coldest and hottest weather; and then their decline reduces the mortality to a minimum. This law prevailed in the whole of the town popula-

tions, but with considerable variation in particular towns: the highest weekly mortality was met with in Wolverhampton, where in the first three weeks of the year the rates were 59, 49, 47: while some of the lowest weekly rates (14 and 15) prevailed in that town and in Bristol.

Diarrhœa was the prevalent fatal zymotic disease in London, and raised the summer mortality; whooping-cough 3249, small-pox 1781, measles 1680, and fever 1340, were the other most fatal diseases of the same class. The great number of 2608 deaths by violence is remarkable; 2169 having been referred to negligence or accident, 125 to homicide, 268 to suicide, and one to execution. 81 suicides were committed by wounds, 17 of them gunshot; 64 by hanging, 44 by poison, and 57 by drowning, and 22 by other means. The suicides by drowning are probably understated; for the "found drowned" are classed under accident, unless the coroners discovered the cause of the drowning. Efforts should be made to diminish these violent deaths, especially those from vehicles without proper drags, driven in the streets by incompetent drivers. Deaths by burning have happily declined; but 239 deaths by this dreadful cause are still too numerous. Numbers may be rescued as "brands from the burning" by more attention to dress, by fire-guards, and safety ladders. The deaths by burns in the summer quarter, 30, it will be noticed are less than half as many as the deaths in the Christmas quarter following, when more fires are burning.

The Weekly Returns of the number of deaths by fevers in 33 years show what may be the influence of the seasons on these formidable diseases. The influence is not great; the weekly mean number of deaths by fever is 43; and it ranged from 38 in the middle of the year, or the end of June, to 49 and 50 in December. Fever-matter (*typhine*) has an independent life of its own, undergoing periodical developments; thus, while the disease in the middle of 1845 was fatal to 14, 18, and 18 in three successive weeks of July, it rose in 1846, and in three weeks of December 1847 was fatal to 132, 136, and 131 lives in successive weeks: the disease was again epidemic in 1864; while at the end of 1872 it had fallen to a low ebb.

Recent research has shown that the common continued fevers of England may be resolved into three kinds, *typhus*; enteric or typhoid fever (*typhia*); and relapsing fever (*typhina*). In the early years the species were not distinguished, and even now they are often confounded by common observers; but in 1872 the deaths returned were by *typhus* 175, *typhia* 824, and simple continued fever 341, including probably a few cases of *typhina*. Typhus has declined rapidly since 1869, enteric fever (*typhia*) slowly.

12,029 deaths occurred in the public institutions of London; 6177 in the workhouses, 5085 in the civil hospitals, including 94 in hospitals for foreigners; 183 men died in the naval and military hospitals; 16 women and 60 children died in lying-in hospitals, 191 men and 155 women in lunatic asylums. One person in 6 dies in a public institution. Out of 100 deaths 9 occurred in workhouses, 8 in hospitals. The deaths in public institutions are increasing; more dying in hospitals, fewer in workhouses and prisons.

London within the Tables can now be followed through the 33 years 1840-1872; and by means of the Censuses and the death-returns its annual rates of mortality are shown in its five great divisions. The mortality during the whole period is at the rate of 24.3 per 1000; in the West Districts 22.7; in the North Districts 22.9; in the South Districts 24.5; in the Central Districts 25.2; in the East Districts 26.0. The mortality in the five corresponding groups of Districts in 1872 was at the rate of, West 19.6; North 21.2; South 20.9; Central 23.6; East 23.6. The density of population in the five groups, expressed in persons to an acre, was West 52, North 56, South 21, Central 150, and East 107.

This Table (No. 37) is the test of the result of sanitary improvements; and it is gratifying to find, that while the population has gone on increasing, and has grown denser in the parts formerly open, the mortality, on the whole, has not increased; on the contrary, it has decreased; for if, to get rid of fluctuations, we compare the mortality of 1840-9 with that of 1860-9, there is a decrease from 25.2 to 24.3 in the rate, or nearly of 1 per 1000. Taking the five regions, this improvement is found in the West; in the North and the East there is a slight deterioration; in the dense Central region the mortality increased; while in South London the mortality fell from 26.6 to 23.2, or 3.4 in the 20 years of interval. This is decisive evidence of the salutary effects of the drainage of South London, which was formerly a marsh; and of the substitution of a better water for the impure waters drawn from the Thames, at points where its stream was polluted by London sewage. The decisive improvement of South London, it will be seen in the Table, became manifest in 1856.

Some disappointment may be felt that the mortality of London, which should be below 20, has not descended permanently to that rate: the reason is too obvious, for the water supply is still drawn from the stream of the upper Thames, which drains a populous basin, and receives much of its impurities. Then it has been shown that although the main sewers have been well laid, the branch sewers, under the district boards, are still imperfect; they are in places ponds of impurities, as Dr. Hardwick and others have discovered by inspection, even in the West End of London. Fine old houses have had vast cesspools laid in the præloacal age; and those cesspools in many cases remain undisturbed, exhaling their fumes through the air. The London Building Act, in some respects worse than the Sanitary Acts applying to country districts, has no adequate clauses to provide for the effectual purity of the new dwellings erected. There is still a want of thoroughness in the London sanitary work, accounting fully for the higher rates of mortality, which look unfavourable by the side of a high standard of salubrity, but favourable as compared with the rates of other cities left in a worse state.

In the year 1872 the annual rate of mortality fell to 21.5 per 1000: this contrasts favourably not only with 1849 and 1854, when the annual rates were, owing to cholera, 30.1 and 29.4, but with every year except 1850, after the cholera had swept off the feeble, when the rate was 21.0. The causes of this better state of things can be most conveniently discussed in the Annual Report, for they were in general operation throughout the kingdom.

In the meantime, London may accept the improvement in the vitality of her population as of good augury.

#### THE 20 GREAT CITIES AND TOWNS.

Their mortality in the aggregate is above the London standard; they lag, as might be expected, somewhat behind the capital, and their mortality only fell in 1872 to 24.3, which was the rate in London during the twelve years 1860-71. These 20 cities are arranged below in the order of their mortality during the last five years. It is right to bear in mind that the three cities of highest mortality are the densest. Density raises the mortality through the condensation of impurity; the quantity of air respired being equal in two populations, the quantity of impurity taken in bears a certain proportion to the strength of the noxious mixture. While density of population does not, therefore, necessarily, it does practically imply density of zymotic impurity in most towns; and a higher resulting rate of mortality. Precautions are required in proportion to density in order to obviate its evils.

20 GREAT CITIES and TOWNS of the KINGDOM arranged in the ORDER of MORTALITY.

AVERAGE ANNUAL DEATH-RATE per 1000, 1868-1872.				
Portsmouth - - 21·9	Hull - - - 25·4	Sunderland - - 26·8	Newcastle-on-Tyne 27·6	
Bristol - - 23·8	Edinburgh - - 26·0	Oldham - - - 27·0	Salford - - - 27·9	
Birmingham - 24·0	Dublin - - - 26·0	Leicester - - - 27·3	Manchester - - 30·9	
Nottingham - 24·9	Bradford - - 26·4	Sheffield - - - 27·5	Glasgow - - - 31·1	
Norwich - - 25·2	Wolverhampton 26·5	Leeds - - - 27·6	Liverpool - - - 31·3	

The Authorities of the 20 great cities deserve applause for what they have done or attempted; but they are far from having attained the stage of the traveller who can rest and be thankful. The deaths in 1872 were in excess by 53,886—more than 1000 a week—of the healthy standard; at the rate of 17 to 1000 inhabitants, the deaths would have been 125,682; whereas 179,568 deaths were registered in the year: and so long as the wails of thousands of children, of the young cut off in the bloom of life, of fathers dying of fever or killed outright by violence, of mothers perishing in childbirth, of men who never attain the fulness of age, are heard, mayors and town councillors should give themselves no rest until they have done their utmost by sanitary precautions to save life, and to render the respective populations under their rule vigorous. They are now on their trial. They will be questioned at the bar of public opinion. They are about to appoint health officers; will they carry out their recommendations, backed as they are by the experience of the navy and army, as well as by the whole series of national civil returns, showing how invariably sweet air, pure water, cleanliness, and hygienic measures of every kind, are attended by health and strength, and their absence by death, disease, and disability?

THE 50 LARGE TOWN DISTRICTS.

The mortality of these town districts, 24·8 in the year 1871, was at the rate of 23·8 in 1872; higher, in the aggregate, than the mortality of London, but somewhat lower than the mortality of the great cities. They follow arranged in groups according to the order of mortality:—

ANNUAL RATE of MORTALITY per 1,000 Persons estimated to be LIVING during 1872 in 50 LARGE ENGLISH TOWNS; ranged in the order of the rates from the lowest to the highest.

Cheltenham 17·6	Birkenhead - 20·5	Plymouth - - 22·3	Carlisle - - - 24·6	Wigan - - - 26·6
Hastings - 17·8	Derby - - - 20·5	Lincoln - - - 22·4	Stoke-up <sup>a</sup> -Trent 24·8	Macclesfield - 26·6
Maidstone - 18·0	Shrewsbury 20·6	Cardiff - - - 22·5	Dover - - - 25·2	Ashton-un <sup>a</sup> -Lyne 26·6
Chatham - 18·8	Brighton - 20·9	Bath - - - 22·7	Blackburn - - 25·5	Merthyr Tydfil - 26·7
Reading - 19·2	Chester - 21·0	Yarmouth - - 22·7	Stockport - - - 25·8	Exeter - - - 26·8
Oxford - - 19·3	Swansea - 21·3	Halifax - - - 22·9	Gateshead - - 25·9	Preston - - - 27·9
Colchester - 19·3	Worcester - 21·4	Newport (Mon.) 23·0	Bury - - - 26·3	Walsall - - - 28·9
Southampton 20·3	Coventry - 21·8	Rochdale - - 23·4	EastStonehouse 26·3	Northampton - 29·7
Devonport - 20·4	Gosport - 21·8	Ipswich - - - 24·0	South Shields - 26·4	Bolton - - - 30·0
Cambridge - 20·4	Huddersfield 22·2	York - - - 24·2	Tynemouth - - 26·4	Dudley - - - 32·3

Preston, Walsall, Northampton, Bolton, and Dudley enjoy here a painful pre-eminence, which cannot fail to awaken the attention of their respective authorities.

THE 11 GREAT FOREIGN CITIES.

Health is of almost equal importance to all mankind, and efforts have been made here to induce the authorities of the great cities of the world to record observations as in London on their state as shown by the returns of deaths and fatal diseases compared with the population living. These efforts have been successful in the Capital cities of all the great

Powers except Russia, whence returns are expected shortly from both St. Petersburg and Moscow, which have excellent municipal organisations.

New York sends returns quite regularly. The authorities of Bombay, Madras, and Calcutta deserve great credit for the efforts they are making to compete in the race of improvement with the advanced cities of Europe.

POPULATION, DEATHS, and the DEATH-RATE in 11 FOREIGN CITIES, 1872.

NAME.	POPULATION.	DEATHS.	DEATH-RATE.
PARIS - - -	1,851,792 (1872)	40,479	21·9
BRUSSELS - - -	185,000 (estim <sup>d</sup> )	4,176	22·6
VIENNA - - -	644,356 (1872)	20,506	31·8

CALCUTTA - - -	477,600 (1872)	11,947	25·0

REMARKS on the METEOROLOGY of 1872. By JAMES GLAISHER, Esq.,  
F.R.S., &c.

The year 1872 was remarkable :—1st for the extraordinary atmospheric depression in the month of January, and the long continued period of depression in the last four months of the year; 2ndly for the lengthened period of warm weather which characterised the first three months of the year, and 3rdly for the remarkable excess of rain-fall during the last quarter of the year.

In Table 40 (pages xevi and xevii) the annual means of the several elements for the stations between Guernsey and North Shields are given.

The following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from the observations at the Royal Observatory, but they may be taken as applying generally to the whole country.

*Atmospheric pressure.*—The reading of the barometer decreased from 29·9 in. on the 1st of January to 28·87 in. by the morning of the 5th, and the mean reading for the 5th was no less than eight tenths of an inch below the average for the day. From the 6th to the 13th the changes were numerous, but on the 14th an increase to 29·9 in. occurred, followed by a steady decrease to 28·9 in. by the 18th. With slight exceptions the mean readings were below their average values from this day until the 3rd of April, and on some days the departures were large especially on the 23rd and 24th of January, when the amounts were 1 in. and 1·1 in. respectively. The minimum value on the 24th of January, viz., 28·21 in. is remarkable as being lower than any since 13th January 1843, when 28·096 in. was recorded. On 24th December 1821 a still lower value was recorded, viz., 27·89 in., and other instances of low readings have been: 6th March 1783, 28·22 in.; 17th December 1809, 28·20 in., and 23rd November 1824, 28·37 in.

On 3rd April, a decided increase set in, and by the 6th 30·3 in. was reached. From the 7th to the 15th high values were generally recorded, but on the 16th a downward tendency was shown which continued until the 21st, when the reading was 28·9 in., the minimum value for the month. From this date with slight exceptions increasing values were recorded to the end of the month.

During the months of May and June the movements were numerous but not generally of very great magnitude, whilst in July the readings were very steady and the range unusually small. In the earlier portion of August larger movements were experienced, the general tendency being to decrease till the 7th when the minimum for the month occurred. After this date increasing values were recorded, the absolute maximum being reached on the 28th. In the last four months of the year the readings were remarkably low, the mean values for each month being respectively 0·13 in., 0·17 in., 0·25 in. and 0·40 in. below the corresponding averages. It is very rarely that so long a period of continuous depression is experienced. The mean value for these months is 29·535 in., and there has been no instance of any approach to such low readings for so lengthened a time except in the year 1841 when the mean for the corresponding period was 29·576 in.

*Temperature.*—The warm weather which set in on the 13th December 1871, continued with very few and very slight exceptions till the 18th of March 1872. The mean temperature of the 97 days ending on this day was more than 5° in excess as compared with the average, the direction of the wind during this time was mostly from S.W. This warm period of 97 days has, however, been exceeded in length in a few cases. For

instance in 1821 a warm period set in at the end of October and continued until the end of April 1822. In 1833 a warm period began on October 21st, and continued till 16th March 1834. In 1858 a warm period set in on December 18th, and extended to 11th April 1859. In 1862 a warm period commenced at the beginning of December and continued to the end of March 1863. The mean temperature of the five months ending March 1822 was  $44^{\circ}\cdot6$ , for those ending March 1834 was  $43^{\circ}\cdot5$ , and for those ending March 1872 (owing to the severity of the cold in November and December 1871) it was  $41^{\circ}\cdot3$  only. The mean temperature of four months ending March :—

In the year 1822 was	$43^{\circ}\cdot8$ .	In the year 1863 was	$42^{\circ}\cdot8$ .
„ 1834 „	$43^{\circ}\cdot3$ .	„ 1872 „	$42^{\circ}\cdot2$ .
„ 1859 „	$42^{\circ}\cdot7$ .		

So that, remarkable as the first quarter of the year 1872 had been for its long continued warmth, there were no less than four instances of a more lengthened period, two of which, viz., in the winters of 1821–1822, and 1833–1834 were of nearly five months duration. The mean value for the three months January to March alone was for 1872,  $43^{\circ}\cdot6$ .

The corresponding mean in	1779 was	$42^{\circ}\cdot4$
„	1819 „	$41^{\circ}\cdot4$
„	1822 „	$43^{\circ}\cdot5$
„	1834 „	$42^{\circ}\cdot9$
„	1846 „	$43^{\circ}\cdot6$
„	1849 „	$41^{\circ}\cdot9$
„	1851 „	$41^{\circ}\cdot9$
„	1859 „	$43^{\circ}\cdot3$
„	1863 „	$42^{\circ}\cdot6$

It follows therefore that throughout the period of 100 years the warmth of the first quarter of 1872 has been but once equalled, viz., in 1846, and has never been exceeded, but in two instances there have been closely approximate values, viz., in the year 1822 and 1859. From the end of March until the first week of May the weather was very changeable with alternate periods of warmth and cold of short duration, the warm periods generally preponderating both in duration and amount. From the 6th of May to the 12th of June the weather was generally cold and cloudy. On June 13th a warm period set in, and for some days the weather was fine, bright, and hot, with heavy thunderstorms on June 17th, 18th, and 19th principally over the Northern and Midland Counties. A long period of changeable weather now ensued which continued until the middle of August, the weather then improved somewhat, about the 16th, but became broken towards the end of the month, and was changeable till the end of the first week in September, with very mild, and almost summer like temperature; in the second week the weather was unsettled, particularly in the north, where much rain fell, whilst in the south it was finer with but little rain, and the mean daily excess of temperature for the 33 days ending September 17th was nearly  $4^{\circ}$ .

From September 18th to October 24th, cold, ungenial weather prevailed, although S.W. and W.S.W. winds predominated, and the average daily deficiency of temperature was about  $4^{\circ}$ . A warm period set in on the 25th October and continued till November 9th, with an average excess of  $3\frac{1}{2}^{\circ}$ , and this was followed by a steady cold period from November 10th to 19th with the wind from N. and N.E. and an average deficiency of  $5^{\circ}$ . On November 20th a period ensued of as warm weather as the preceding period was cold, lasting until December 3rd, after which occurred variable periods until the 19th but generally a deficiency of temperature was more strongly marked, but on the 20th of December a remarkably warm period set in, which continued until the end of the year and yielded an average daily excess of more than  $9^{\circ}$ .

*Rain-fall.*—The fall of rain in January was large, being as much as 1·7 in. in excess, but in February less rain than the average fall was measured to the extent of 0·8 in. In March the amount again exceeded its average but only to the amount of 0·5 in., and in the next three months the falls were slightly in defect in April and June, but in excess to almost the same amount in May. In July the amount was nearly the same as its average, in August slightly in excess, but in September as much as 1·0 in. in defect. The rain-fall, however, in these months was much heavier in the Northern than in the Southern counties and harvesting was frequently interrupted both in August and September by heavy rains and frequent thunderstorms, so that by the end of September very little progress had been made either in the north of Ireland or in Scotland, where operations were still further checked by sleet and snow. In the next three months the frequency of rain was a most remarkable feature. During this period it fell on no fewer than 67 days, a larger number than had been previously experienced at Greenwich since the year 1815. The total amount was large, amounting to 11·32 ins., a quantity no less than 4·2 ins. in excess of the average. In 58 years this fall has but once been exceeded in the corresponding three months, viz., in 1821 when it was 11·47 ins. or 0·15 in. greater; and back to 1815 there is only one other year in which a greater quantity than 11 ins. was recorded, viz., in 1852, 11·13 ins.

This unusual frequency of rain was general over the country. At Stonyhurst, rain fell on 89 days, and at Guernsey on 80 days whilst the general average over the country was 67 days. The amount at Guernsey was very remarkable being as much as 25¼ ins.

The mean amount from all the stations was 13·97 ins. being more than double the fall in the corresponding period of 1871, which was 6·09 ins.

The total rain-falls for the year ranged from 65·4 ins. at Allenheads, to 28·5 ins. at Royston, and the number of rainy days from 319 at Stonyhurst, to 156 at Holkham.

Mean - -	16.5	33.8	22.3	61	30	45

NOTE.—The Table may be read thus:—In the year 1838 to every 10,000 persons living there were 154 persons married, 303 births, and 224 deaths; the number of persons living to every person married, birth or death, was 65, 33, and 45 respectively. The rates in this Table have been calculated upon the estimated populations given in Table 1, but no corrections have been made for the difference between an ordinary year of 365 days and leap year.

TABLE 3.—Marriages in England in each of the Thirty-two Years 1841-72; those solemnized according to, and not according to, the Rites of the Established Church; with other details respecting the Marriages in the Churches of the Established Church.

Mean Annual Rate per 1000 in each quarter					-	-	-	-
					13·7	16·8	15·9	19·6

*Note.*—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.

\* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living, 124 persons were married.

TABLE 6.—**Marriages in England.** The Proportion per Cent. of **Minors** of each Sex, of Males and Females who **signed the Register with Marks**, and of Persons who were **Widowers** or **Widows**, in each of the Thirty-two Years **1841-72.**

Average proportion in 35 years, 1838-72 - -			23·3	21·4	104	109

The Table may be read thus :—In the year 1838 to every 1000 males living there were 23·4 deaths; to every 1000 females living there were 21·5 deaths; and to each 100 females who died there were 105 deaths of males. The last column shows the *relative* mortality of *males and females*; and that out of equal numbers living the deaths of males were as 109 to every 100 deaths of females in 1838.

TABLE 19.—Deaths of 75 Persons returned as Aged 100 Years and upwards in ENGLAND and WALES during the Year 1872.

District Numb.	DISTRICT.	DATE OF DEATH.	PLACE OF DEATH.	SEX.	STATED AGE.	OCCUPATION.	CAUSE OF DEATH.

Note.—The Table may thus be read :—Of each 1000 male children living under five years of age, 72·5 died in the 35 years 1838-72; in the five years 1841-45 this proportion averaged 69·0 per 1000; and in the five years 1866-70 it was 73·0.

\* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841-71 (see Table 61, pp. cxiv-cxv), distributed in the several groups of ages according to the proportions found to prevail at the four Censuses.

Mean Annual Rate per 1000 in each Quarter -					24·9	22·1	20·7	21·9

\* These rates may thus be read, without reference to the decimal points:—In the March quarter of the year 1838, to 10,000 of the population 262 deaths were registered. A correction has been made in the calculations for the inequality in the number of days in the different quarters, see note to Table 5.

**TABLE 27.—Proportional Number of Deaths in England in each Quarter to 1000 Deaths in the Average Quarter\* of each of the Thirty-five Years 1838-72.**

583	Cardiff - - - M -	67,076	2,415	1,510	36·0	23·5†	5·4	Cardiff Sub-district.
585	Merthyr Tydfil - - P -	95,925	3,819	2,561	39·8	26·7	7·4	{ Lower and Upper Merthyr Ty and Aberdare Sub-districts.
588	Swansea - - - M -	69,182	2,772	1,476	40·1	21·3	3·3	{ Swansea and Langafelach, a Llansamlet (Neath) Sub-district.

NOTE.—The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts in the column approximately represent, are Municipal or Parliamentary.

\* The figures in this column are the unrevived numbers enumerated at the Census in April 1871, raised to the middle of 1872 by addition of 1½ times the annual rate of increase which prevailed between 1861 and 1871. A decrease of population between 1861 and 1871 is shown in Gosport, Devonport, Dudley, Coventry, Macclesfield, and Ashton-under-Lyne; in these instances the enumerated population has been proportionally depressed.

† These rates of mortality have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals & Lunatic Asylums, situate within the District or Sub-districts here taken as representing the town, or by the exclusion or addition of proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where a Workhouse is situated outside that area.

\* The figures in this column, excepting those for London and Dublin, are the *unrevised* numbers enumerated at the Census in April 1871, raised to the middle of 1872 by the addition of 1½ times the annual rate of increase which prevailed between 1861 and 1871. The estimate for London is based upon the *revised* Census number for 1871, and in the case of Dublin the population is taken as stationary at the *revised* number then enumerated.

Average Number living } to One Death annually } (1840-72) . . . . . }	41	44	44	40	38	41

NOTE.—The populations upon which these rates of mortality have been calculated are deduced from the numbers enumerated at the four Censuses of 1841, 1851, 1861, and 1871. The deaths used are those registered in the complete years.

Certain alterations affecting the West and Central groups of districts were made in the year 1863, but corrections have not been made in the results given in this Table for years prior to 1861.

TOTAL	1,456,647	4,905,262	1,016,526	182,850	7,561,285
Average annual emigration from the United Kingdom					
			From 1815 to 1872	-	130,367
			For the 10 years ending 1872	-	230,223

\* The Customs' returns do not distinguish the emigration to Australia during these 10 years, but it appears from other sources that the emigrants who went to this country were in 1821, 320; in 1822, 875; in 1823, 543; in 1824, 780; and in 1825, 458 persons. These numbers are not included in the totals of this Table.

TABLE 48.—Emigration in 1872.

\* The deaths of soldiers, marines, and seamen from the Royal Navy, who were passengers in British Merchant Ships, were 33 in 1856, 59 in 1857, 136 in 1858, 196 in 1859, 196 in 1860, 69 in 1861, 122 in 1862, 116 in 1863, 96 in 1864, 140 in 1865, 184 in 1866, 97 in 1867, 81 in 1868, 51 in 1869, 27 in 1870, 24 in 1871, and 1 in 1872. The number is 1,648 in seventeen years, which, if added to the 9,440 above, makes 11,088, the total number of deaths of British subjects at sea in 1856-72, exclusive of those of merchant seamen. The Entries in the "Marine Register" of Births occurring in 1872 were but 73, and of Deaths 219.

In the 21 years 1852-72	3,844,345	81,515	21·2

\* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls or officers of the hospitals on their discharge from their ships.

If a seaman die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a passenger die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given, and in the accompanying tables the births and deaths are classed according to the years in which they occurred. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE 60.—RETURN of the AGES, RATING, and CAUSES of DEATHS of **4,123** Seamen reported to the BOARD OF TRADE as having died in the **British Merchant Service** in the Year 1872. (*Parliamentary Return, No. 216, Session of 1873.*)

TABLE 62.

ESTIMATED POPULATION OF THE UNITED KINGDOM,  
(including ISLANDS in the BRITISH SEAS)  
with Army, Navy, and Merchant Seamen abroad belonging thereto.\*

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 -	16,302,410	8,096,082	8,206,328
1811 -	18,532,522	9,194,348	9,338,174
1821 -	21,300,573	10,519,256	10,781,317
1831 -	24,423,588	12,004,025	12,419,563
1841 -	27,077,095	13,325,889	13,751,206
1851 -	27,764,034	13,656,998	14,107,036
1861 -	29,358,927	14,397,427	14,961,500
1871 -	31,914,985	15,622,725	16,292,260

\* In estimating the number of men in the Army, Navy, and Merchant Service abroad, the proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

The above numbers have been deduced by adding to the estimated population of the United Kingdom, as given in Table 61, the enumerated population of the Islands in the British Seas, and the Army, Navy, and Merchant Service abroad (*see* p. vii. of Vol. I. Census of England and Wales, 1871).

NOTE.—Cholera is given as being chiefly the cause of the high rate of mortality in Denmark in 1853; in Sweden in 1853, 1857, and 1866; in Austria in 1866; in Prussia in 1866; in the Netherlands in 1859 and 1866, where also small-pox prevailed in 1871; and in France in 1865 and 1866. War contributed to the same end in Denmark in 1850 and 1864; in Austria in 1866; in Prussia in 1866, 1870, and 1871; and in France in 1870 and 1871.

M. V. Falbe-Hansen remarks that an addition of territory containing about 8000 population was made in 1864, and the facts relating to these are shown in this Table from 1860.

\* The populations for these years were enumerated at the respective Censuses.

† Cholera was epidemic in the year 1853, and was raged in the years 1850 and 1864.

NOTE.—Previous to 1st January 1860 children who died within 24 hours after birth were counted as still-born.

**TABLE 67.—Sweden. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1850 to 1872.**

\* The populations for these years were enumerated at the respective Censuses. Dr. Berg attributes the decrease observable in the population in the years 1868 and 1869 to failure of crops and consequent emigration.  
† Cholera was epidemic in the years 1853, 1857, and 1866.

**TABLE 68.—Austria. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1853 to 1872.**

NOTE.—The Statistical Department of France favoured the Registrar-General with the returns for the years 1853-61 and for the year 1866. The population in the four years 1862-65 and in the years 1867-69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The estimates for 1870 and 1871 have been supplied by the French Government. The returns since the year 1869 include the three newly annexed departments. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which was their last domicile. The Statistical Bureau revised the Population and the numbers of Marriages, Births, and Deaths for the years 1853-71.

\* Cholera was prevalent in 1865-66, and war raged in 1870 and 1871.

1871*	—	—	—	—	—	—	—	—
1872*	—	—	—	—	—	—	—	—

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. This method of estimating the population is sanctioned by the Junta General de Estadística at Madrid. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

\* The figures relating to 1871 and 1872 have not yet come to hand.

1872‡	—	—	—	—	—	—	—	—

\* The decrease of marriages in 1866 may be attributed to the law which then came into operation removing the civil registration from the parochial authorities to the communes; there had been a marked increase in the previous year resulting from a wish to evade the law about to come into operation. Doubtless many of the marriages solemnized in the churches during 1866 escaped registration.

† The figures for 1870 were supplied by Signore L. Bodio, chief of the Statistical Department in Italy.

‡ The figures relating to 1872 were not received in time for publication.

**TABLE 74.—Changes in the Constitution of the Superintendent Registrars' Districts and Registration Sub-districts during the Year 1872.**

[The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*. The Figures in Cols. 1. and 4. show the number of the District.]

Superintendent Registrar's DISTRICT and Registrar's <i>Sub-district</i> from which a Transference was made.	Date of Change.	Place and Population (1871) transferred from the District in Column 1 to the District in Column 4.	Superintendent Registrar's DISTRICT and Registrar's <i>Sub-district</i> to which a addition was made.
---	-----------------	--	---

**No Change was made during the Year 1872 in the Constitution of Registration Districts or Sub-districts.**

The following alterations were made in the names of the under-mentioned Sub-districts of ROCHDALE, No. 470 :

Castleton Without *renamed* Castleton Further.  
Castleton Within „ Castleton Nearer.

\* The Registration Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties

therefore differ more or less from the boundaries of Counties (proper).

† These figures have been furnished to the Registrar General by the Ordnance Survey Department; they do not include space occupied by foreshore or tidal water of rivers and creeks.

The Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1872.

† Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. This column also includes 58 cases of marriage after divorce, viz., 22 divorced

men who married spinsters, 21 bachelors who married divorced women, 4 divorced men who married widows, 9 widowers who married divorced women, and 2 divorced men who married divorced women. For the districts in which these marriages took place, see Table 10, p. lxvii, of Report.

\* The Registration Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which either the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

† These figures have been furnished to the Registrar General by the Ordnance Survey Department; they do not include space occupied by foreshore or tidal water of rivers and creeks.

‡ Some of the births—especially of illegitimate children in London and large towns—escape registration.

\* The Districts are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are generally identical with the Poor Law Unions of the same names; they are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by *H* for Hospital or Infirmary, *L* for Lunatic Asylum, and *W* for Workhouse Establishment receiving inmates from other Districts than the one in which it stands; and repetitions of these letters show the number of such Institutions in any District.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated.

\* Sub-districts are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *Wc* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (—) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1872 are given on pages 99-117.

## DEATHS IN PUBLIC INSTITUTIONS, 1872.

---

THE FOLLOWING PAGES contain the numbers of deaths registered during 1872 in most of the public institutions of England. These figures will afford the means of correcting the mortality of districts and sub-districts where affected by the situation therein of these institutions, through the deaths recorded in them. The following list includes all Workhouses, Hospitals, Infirmaries, and public Lunatic Asylums, while prisons, almshouses, schools, private lunatic asylums and benevolent asylums, are excluded. The list, as settled, includes 1245 institutions; of which 712 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 450 Hospitals or Infirmaries; and 83 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included.

---

Deaths registered in the principal **Public Institutions of England** in the **Year 1872.**

\* In St. Joseph's House, an asylum for aged poor, situated in this sub-district, 29 deaths occurred during the year.

† In this sub-district is also situated Nazareth House, an institution for the aged, infirm, and sick, conducted by the Sisters of Nazareth; 22 deaths occurred therein during the year 1872.

‡ Five deaths occurred during the year in the Sussex and Brandenburg private Lunatic Asylum situated in this sub-district.

§ Eleven deaths occurred during the year in the Northumberland House private Lunatic Asylum situated in this sub-district.

|| In the Infant Home, Great Corny Street, 16 deaths occurred during the year. ¶ This Workhouse was closed on 25th March 1872.

\*\* In-patients were not received at this building after the opening of the new Hospital in June 1872; see Haggerston East sub-district.

Deaths registered in the principal Public Institutions of England in the Year 1872—continued.

\* Seven deaths occurred during the year in the Brislington House private lunatic asylum.

† This hospital is situated partly in Somersetshire and partly in Gloucestershire. As an institution it is counted as belonging to the latter county, in which the larger portion stands; the deaths, however, are referred to the county in which they actually occurred.

‡ Four deaths were registered during the year in the Longwood House private lunatic asylum.

§ Four deaths occurred during the year in the Barnwood House (private) Hospital for the Insane.

Deaths registered in the principal Public Institutions of England in the Year 1872—continued.

NOTE.—The Table may be read thus: Of the 255,135 deaths of Males, 65,387 were those of children under 1 year of age; 29,105 those of the age 1 and under 2 years; 9,630 of the age 5 and under 10 years; 6,642 of the age 15 and under 20 years, and so on.

\* This column includes the deaths of 24 males registered as aged 100 years and upwards; namely, 9 aged 100, 5 aged 101, 2 aged 102, 4 aged 103, 1 aged 104, 1 aged 105, 1 aged 107, and 1 aged 111 years. The districts in which these deaths occurred and the cause of death in each case are stated in Table 19, page lxxvi, of Report.

The Causes of Death in England and in London, in combination with the Ages at Death, are given at pp. 144-159.

## ENGLAND.—SUPPLEMENTARY TABLE of the

[The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all Diseases are classified in the Tables of Causes of Death, pp. 146-149, under 116 heads; some of these heads, however, include groups of diseases which are very distinct from one another, but which either are fatal to only a few persons, or are often confounded with other diseases. The rule has been to refer the distinct diseases to heads under which the cases were so numerous, that the additional numbers

## CAUSES OF DEATH at different Periods of Life, in the Year 1872.

would not materially interfere with the calculated proportions. Where it is desired, partial correction, however, can be made by means of the following Supplementary Table, containing the deaths from many distinct diseases, such as chicken-pox, mumps, &c. &c., which in the preceding Tables, have no separate classification, and also many of the deaths from various forms of disease (such as softening of the brain, *necrencephalus*, deaths from which are included under "*Brain Disease*, &c.") which in some cases are returned under other heads.

## APPENDIX.

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in  
ENGLAND, by W. FARR, Esq., M.D., F.R.S.

YEAR 1872.

SIR,

DEATH is the inevitable termination of human life, and is physically only one of the changes of the forces that animate the body in its evolution from a living point to final dissolution into its elements. Its causes are not unimportant even when life is protracted to its extreme limit of a hundred years; but their importance is enhanced incalculably by the fact that life is cut short in childhood and manhood by mechanical injuries, by fire, by water, by poison, by famine, by plague; by zymotic, constitutional, local diseases; and by various agents which modern science has shown are under control.

Homicide is the most dreaded cause of death; it is a cause which society in its earliest stages undertook to limit by punishing menslayers, and by stopping the arm of private vengeance. The primary aim of judicial proceedings was the protection of life against criminals; and in England this gave rise to the coroner, whose office consists mainly, Blackstone says, "in inquiring, when any person is slain, or dies suddenly, or in prison, concerning the death," and committing any one found guilty by the inquest for further trial.\* The number of inquests held in the year was 25;705, and the verdicts are thus classified in the Judicial Statistics:—

### CORONERS' RETURNS OF INQUESTS, 1872.

(See Judicial Statistics, 1872, p. xxii.)

VERDICT.	TOTAL.	Males.	Females.
TOTAL INQUESTS - -	25,705	18,046	7,659
Murder - - - - -	257	130	127
Manslaughter - - - -	176	120	56
Justifiable homicide - - -	2	1	1
Suicide or self-murder - - -	1,455	1,057	398
Accidental death - - - -	11,435	9,066	2,369
Injuries, causes unknown - - -	250	176	74

Executed - - - - -	11	11	—
Natural death from :			
Excessive drinking - - - -	379	258	121
Disease aggravated by neglect - - -	160	82	78
Want, cold, exposure, &c. - - -	238	143	95
Other causes - - - - -	8,259	4,964	3,295

\* See Jarvis on Office and Duties of Coroner, 3rd edition; and Baker's Law of Coroner.

The cost of the inquests was 78,535*l.*, or 3*l.* 1*s.* 1*d.* an inquest ; and this is exclusive of the value of the time of the twelve jurymen summoned to each inquest.

It will be observed that the verdict of murder was only returned in 257 cases, of manslaughter in 176; the convictions for murder on trial were 30, and the executions in the year 14.\*

The intention of the inquest was to discover crime, with a view to its punishment and prevention ; and in the imperfect state of science at that time "sudden death" was fixed on as a *prima facie* ground for inquiry. Now it is well known that many spontaneous diseases take away life suddenly ; and that in some of the most atrocious murders by arsenic, by antimony, and by cruelty, death is slow in its approaches. The mere fact that death is sudden is a ground for medical inspection, but not necessarily for an inquest ; and there are many violent deaths of which a medical inspector may ascertain the causes without moving the apparatus of the inquest, there being no more suspicion of crime in such cases than there is in deaths from fever, pleurisy, or consumption.

With the extension the inquest had attained it left the causes of about 466,560 deaths—of 95 per cent. of the total number in the year—unexplored ; yet it is now ascertained that vast numbers of these deaths are referable to negligence ; or to causes which admit of removal by hygienic treatment, and by sanitary regulation. To take one class of causes only found to prevail with the greatest intensity in the dense population of towns,—it can be shown that with the present distribution of population by age, the mortality in many healthy districts is below, and in none above, 17 annual deaths to 1000 living : and at this rate the deaths in England and Wales would have been 392,151 in the year. The actual deaths registered were 492,265. Hence it follows that at least 100,114 deaths were the results of causes not everywhere,—not necessarily in such fatal operation. The mean lifetime of people living in the least unhealthy districts of the kingdom is 49 years ; in all England 41 years ; thus life is abridged by full 8 years. The half of an English generation is cut off before the forty-sixth year is attained ; and we have seen how small a fraction of the loss of life is the result of intentional homicide. After judicial inquiry, only 125 deaths are referred to this head, whereas full 100,000 deaths due to violations of natural laws call for inquiry, with the prospect of success in the discovery of causes still prevailing, which are as fatal as the serpents, wild beasts, and savage criminals of past ages.

The attempt to extend the inquiry into the causes of death was made in London in the sixteenth century, after the College of Physicians was founded by Linacre. The fatal plagues impressed the minds of statesmen, but to one of the companies of the city of London is due the credit of publishing the first weekly bills of mortality. It was not, however, until 1837 that the Inquiry into the cause of death was instituted in every case of death under the Registration Act. Then the Registrar General engaged the medical colleges to afford him their assistance on the ground of its scientific utility, the "Cause of Death" having been inserted in the schedule of the Bill by the House of Lords, and accepted by the House of Commons, after its importance had been urged by no less a body than the British Association. A Certificate Book first issued by the Registrar General in 1845, to legally qualified medical practitioners, a statistical nosology, and a letter to the coroners completed the administrative machinery under which the results of the inquiry into the causes of death are recorded.

Without entering into metaphysical disputes on causation, it is evident, that to be of practical use, the cause of death recorded must be as clearly defined as possible, and that the verdicts of juries should express the exact essential facts, and not vague generalities.

---

\* See note, p. 203.

There were 790 deaths returned simply as by burns, and as the way in which the burns were wrought is not stated, it is not possible to suggest practical remedies. But 16 deaths by burns are referred distinctly to fires, and this implies that some such deaths may be avoided by preventing fires, by extinguishing fires, by fire-escapes, and by other means. Again, 373 deaths by burns are referred to the clothes taking fire, and this at once suggests that such deaths may be diminished in number by caution in approaching open fires, by fire-guards, and by the use of less combustible dresses than those in common use. And this is confirmed by the discovery that females, whose dresses are the most combustible, are burnt to death in greater numbers than males; and that of 152 males so burnt to death 131 were children under ten years of age, when the clothes of boys are often as combustible as those of girls. The old loose verdict of "drowning" without distinction is of little practical avail, but the knowledge of the circumstances at once suggests a variety of preventions. Thus, while it is stated that 242 males and 2 females were drowned when bathing, 68 males and 2 females by falls from ships, 102 males and 5 females by shipwreck, 4 males in skating, 63 males and 6 females by the upsetting of boats, we cannot but regret that 2854 deaths are registered as found drowned, or drowned, without any further particulars available for analysis. The verdict "suicide" points out a criminal act, but it does not display important links in the chain of causation; for to say nothing of controllable passions, there are the seductive temptations offered by instruments of death at hand. Take out of easy reach the cartridge, the razor, the poison; and the number of suicides from these causes declines. The instrument, therefore, as well as the agent is to be recorded under the cause of death. In deaths by wounds the part wounded is of evident importance; for a gun shot, for example, fatal in the heart or the brain, may be of little consequence in other parts of the body: the wound is only directly fatal in some important organ, which should be specified in the return, as the wound in that organ is the final cause of death. The *place* and the *exact time* in which the fatal injury was inflicted should be noted; this is important in such cases as street accidents, where the sufferer is carried away from the spot and dies elsewhere.

In fine, as is shown in the "Observations on the Registration of the Causes of Violent Deaths,"—

"Care should be taken that every return of a violent death answers the three-fold inquiry involved under 'the Cause of Death;' *namely*,—

(1.) Was the deceased killed by his own act, or by that of other persons, and in what circumstances?

(2.) What were the means, instruments, or things by which the fatal injury was produced?

(3.) What was the nature of the mortal injury, and what time elapsed before death?

Or the return should have on the face of it an explanation of the omission.

At the same time the statement should be made as concise as it is clear and comprehensive: no vague or unnecessary word should be inserted."

The inquest is a most valuable institution, and under the intelligent coroners of the country we may hope to see henceforward the true causes of the deaths into which they inquire set forth in systematic completeness, as under the Act 6 & 7 Will. 4. c. 89. they have the power to call in a medical expert, and to direct him to perform a post-mortem examination, with or without a chemical analysis. The new Registration Act relies entirely on the jury, instructed by the coroner, for a return of the cause of death whenever an inquest is held.

Hitherto the grant of certificates of the cause of death by the registered medical practitioners of England has been purely voluntary, and the Registrar General has to thank the medical profession for the hearty co-operation he has received from them in the administration of the Act. In the Amendment Act of 1874 (37 & 38 Victoria) the Legislature has inserted the subjoined clauses:

*Certificates of Cause of Death.*

Regulations  
as to certi-  
ficates of  
cause of  
death.

20. With respect to certificates of the cause of death, the following provisions shall have effect :

- (1.) The Registrar General shall from time to time furnish to every registrar printed forms of certificates of cause of death by registered medical practitioners, and every registrar shall furnish such forms gratis to any registered medical practitioner residing or practising in such registrar's sub-district :
- (2.) In case of the death of any person who has been attended during his last illness by a registered medical practitioner, that practitioner shall sign and give to some person required by this Act to give information concerning the death a certificate stating to the best of his knowledge and belief the cause of death, and such person shall, upon giving information concerning the death, or giving notice of the death, deliver that certificate to the registrar, and the cause of death as stated in that certificate shall be entered in the register, together with the name of the certifying medical practitioner :
- (3.) Where an inquest is held on the body of any deceased person a medical certificate of the cause of death need not be given to the registrar, but the certificate of the finding of the jury furnished by the coroner shall be sufficient.

If any person to whom a medical certificate is given by a registered medical practitioner in pursuance of this section fails to deliver that certificate to the registrar, he shall be liable to a penalty not exceeding *forty shillings*.

And under the penalty clause (39) it is enacted that, "Every person who refuses or fails without reasonable excuse to give or send any certificate in accordance with the provisions of the said Acts (Registration Acts, 1836 and 1874) shall be liable to a penalty not exceeding forty shillings for each offence."

Thus under the Amendment Act every registered medical practitioner in England is bound, under penalty for refusal, to give "a certificate stating to the best of his knowledge and belief the cause of death." This will only bring a salutary pressure to bear on the few practitioners who neglect to give such certificates as have hitherto been given freely by their brethren.

Where the persons deceased have not been attended by registered medical practitioners, and there has been no inquest, there is no provision to secure the certification of the cause of death in the Act; but this defect may be met to some extent, for under clause 44 the Registrar General, with the consent of the Local Government Board, is empowered "to make regulations for prescribing any matters authorised by this Act to be prescribed, and to revoke and alter such regulations."

In England every poor person, unable to pay for medical advice, can obtain the services of a poor law medical officer gratuitously, so that the day may not be distant when nearly every person dying will be attended by a registered medical attendant.

At present a certain number of educated practitioners holding good degrees are not on the register; and hitherto their certificates have been received by order of the Registrar General, who did not wish to bring any undue pressure to bear on them. But to comply with the new Act it will be desirable for them to register, as only certificates of registered practitioners are recognized under the above clause.

The refusal of certificates from quacks and pretenders will enlighten the public, and distinguish the qualified practitioner from the unqualified.

In several foreign states every dead body is visited by a medical inspector, who inquires into the cause of death, and grants a certificate, without which the burial cannot take place. As a measure of police this has some advantages. But under the Amendment Act the medical attendant is consulted, and is entrusted by the State with the duty of returning the cause of his patient's death; he performs in death from disease the office which the coroner executes in sudden deaths, or deaths from violence; and this arrangement, while it is most satisfactory to private families, is less costly, is probably most agreeable to the practitioner, and supplies more authentic information than could be procured from any other source.

Sometimes the medical practitioner falls into the error of the coroners of old, and omits some essential fact in the associated links of the cause of death. It is important to avoid this mistake. For example, measles is often followed by pneumonia, and other *sequela*; now measles is the primary cause of death in such a case, but it is rendered fatal by the super-vention of pneumonia, which is one of its developments. The cause of death is, therefore, properly returned "measles, pneumonia." So when scarlet fever is followed by fatal dropsy the scarlet fever as well as the dropsy is properly returned. By error, death has been by some practitioners ascribed solely to pyæmia, peritonitis, or hæmorrhage, whereas these secondary diseases have sprung from precedent childbirth, which should never be suppressed.

A great variety of names are in use; but for the purposes of the national register, practitioners will do well to adopt the names in the excellent nomenclature of the Committee appointed by the Royal College of Physicians.

As pathology is continually advancing, changes necessarily supervene in what have been called the morbid units; and these changes have to be recognized in the certificates. Embolism, Bright's disease, hypertrophy of heart are now recognized diseases; they were a few years ago masked and returned under some of their prominent symptoms.

It is true that the disease of which a person dies is at times unknown; the medical practitioner has had inadequate means of observation; he may be imperfectly skilled in advanced diagnosis; or the symptoms may be indistinct, complicated, and only explicable by autopsy. In such cases the certified cause is vague; but it does not follow that the whole series of returns subject to such imperfections is useless. If the attainable though imperfect knowledge of disease suffices for the purposes of medical practice, it cannot be worthless for medical statistics.

The mortality of the year 1872 was below the average, and the diminution of activity was apparent in all the five classes of causes except the third.

### I.—ZYMOTIC DISEASES.

The mortality from these maladies showed a sensible decline. Small-pox, which had been excessively fatal in the previous year, declined in virulence; but of it no less than 19,094 persons died. The mean annual mortality\* to 10,000 in the 20 years, 1850-69, was at the rate of 2·04, whereas it was 10·24 in 1871, and 8·33 in 1872, and this after the most laudable efforts to extend vaccination by legislative enactments. The mortality by measles, scarlet fever, diphtheria, croup, and the various forms of fever was much below the average. Thus scarlet fever and diphtheria, instead of killing 10·46 in 10,000, as they did in the twenty years, were only fatal to 6·15; the fevers, instead of the average 9·18, were fatal to 6·12. Diarrhœa and cholera together were fatal to 10·05, which is as near the twenty-year average as possible. Whooping-cough was more than usually prevalent.

The enthetic order of disease, which is induced by inoculation of morbid virus, became more fatal.

To syphilis, 1831 deaths were referred; the average rate of the twenty years was 0·59, while in this year it rose to 0·80.

The dread disease hydrophobia, which had gone down to a low point, rose again, and was fatal to 39 persons in the year. It can only be reduced by stricter police regulations.

The dietic order of disease exhibits some changes; deaths referable directly to privation became less frequent; but more deaths than the

---

\* Throughout these comments, by *mortality* must be understood the proportion dying in a year to 10,000 living, unless some other basis is mentioned. The average referred to is drawn from the 20 years 1850-69.

average in the 20 years, 1850-69, were referred to the want of breast-milk. The deaths from purpura and scurvy have grown more frequent since 1860 than they were in the previous 10 years. Alcoholism showed evident marks of decline; and we may hope ere long to see still less evidence of the effects of drinking to excess.

The parasitic order presents some changes; thrush declined, and worms and other parasites have been a little less fatal since 1870 than in the ten preceding years.

The mortality by the whole zymotic class was 50.86 on the average, and only 47.73 in the year under review.

The zymotic diseases replace each other; and when one is rooted out it is apt to be replaced by others which ravage the human race indifferently, wherever the conditions of healthy life are wanting. They have this property in common with weeds and other forms of life; as one species recedes, another advances. By improving the hygienic conditions in which men live, you fortify them against infection; and further, by isolating the infected, the chances of attack are diminished.

## II.—CONSTITUTIONAL DISEASES.

Like zymotic diseases, these diseases, variable in their seat, are characterized by specific products, which are, however, not to the same extent capable of reproducing themselves in other bodies. Thus soft cancer is diffused over the body of its victim, but it is not like small-pox, infectious.

The constitutional diseases were fatal to 86,280 persons. The mortality was 37.68, the average being 43.12. Gout, the first of the diathetic order, is more fatal than it was, as a natural consequence of the increase of luxurious living among larger numbers of people. The decrease of reported deaths by dropsy is probably only apparent; the disease by better diagnosis being referred to the heart or other original source; and so, perhaps, the increase of cancer may be only apparent, as better means now exist of detecting it in internal organs. Be this as it may, the latter dreadful disease is much more commonly referred to in the Returns than it was; the mortality was 3.15 in 1850-9, became 3.87 in the next decenniad, was 4.29 in 1871, and 4.37 in 1872.

The tubercular is far more fatal than the diathetic order. The great central disease phthisis—commonly called consumption—is the most constant, the most fatal of all the diseases of the human race; the mortality by it alone was 22.97. This is a decline on previous rates, for the average was 26.38. But I reserve any further observations on phthisis until I have to notice the deaths ascribed to asthma and bronchitis.

## III.—LOCAL DISEASES.

These diseases are pure inflammations and their sequels, giving rise to general disturbance, and producing changes in the tissues of particular organs; or they are functional disorders, such as insanity and neuralgia. Their mortality is increasing, and they were in the year fatal to 86.22 in 10,000; which is less by 4.27 than the mortality in the previous year, but is 2.89 above the average. The deaths by local diseases were 197,429.

The diseases of the nervous, circulating, respiratory, and digestive systems are the most fatal, as they affect central ruling organs on which the life of the individual and of the more remote parts of the organism directly depends.

The fatal diseases of the nervous system were slightly below the average, they amounted to 62,809, including convulsions 25,377, affecting children chiefly; apoplexy and paralysis together, 23,412; the two affections

running very much into each other, and resulting from lesions of the brain and spinal marrow. It is a curious fact that the deaths referred to each of the two diseases are nearly equal in number. Thus, 11,793 died of apoplexy, 11,619 of paralysis; many of the cases of softening and other affections of the brain are distinguished in the supplementary table (p. 150-1.) to which reference should be made in this and similar cases.

Among the uncommon causes of death shaking palsy may be cited, males 36, females 31; ophthalmia, males 14, females 16; otitis, males 45, females 14. One death of a male (55-65), and one of a female (20-25) are ascribed to catalepsy.

27,086 deaths are referred to diseases of the heart and blood-vessels; among them are 643 from aneurism, 603 from pericarditis, the larger proportion of cases specified being hypertrophies. In syncope 922 persons died. By embolism 136, a disease of recent discovery, and by the distressing angina pectoris 350 persons perished. The embolism was most fatal to women, the angina to men.

The diseases of the respiratory organs of all the local diseases are the most fatal; by them 73,393 persons died. 42,752 deaths are ascribed to bronchitis, 20,282 to pneumonia, and while the deaths by pneumonia (inflammation of the lungs), and asthma have decreased, those from bronchitis have increased steadily from 16,499 in the year 1847 to 32,347 in 1860, and to 42,752 in 1872. Here it is necessary to bring phthisis into account. That disease affects the intestines and other viscera, but its most prominent symptoms, the hæmoptyses, and the largest tubercular deposits are in the lungs, and it was often formerly, and is now sometimes confounded with chronic bronchitis. Hence we may inquire whether the increase of bronchitis is only apparent; whether what was formerly called phthisis, or popularly consumption, may not now be called bronchitis. In that case there should have been a corresponding decrease from phthisis, which has, however, not been observed. The deaths ascribed to phthisis (consumption) were 53,317 in 1847; 51,024 in 1860; and 52,589 in 1872. Taking the deaths from pneumonia, bronchitis, and phthisis together for the three years 1847-60-72, the numbers are 93,263, 108,635, and 115,623. The increase of population has to be taken into account, and this is done in calculating the rate of mortality. Now, dealing with the whole order, the mortality by respiratory diseases was at the rate of 30 and 34 in the two decennials 1850-9 and 1860-9, by phthisis 27 and 25; by the two together 57 and 59. Thus there is an evident increase in the mortality by pulmonary disease.

The year 1872 was remarkable for a diminution in the respiratory mortality; which was due to the mild temperature of the winter, for while extreme winter cold long protracted, always increases, mild weather diminishes the mortality of bronchitis.

The breathing of dust, and of any mechanical substances, such as grit, and particles of steel evolved in grinders' or stonemasons' work, is known to produce diseases of the air tubes, called by various names; and it is thus exceedingly probable that the increase of deaths by bronchitis is due to the smoke, dust, dirt, and other matters in the air of towns and workshops where more people every year are doomed to breathe.

The practical inference is, that the most effectual means should be adopted, to purge the air people breathe of all impurities; hence fires should be constructed to burn their smoke, streets should be kept clean, workshops be well ventilated.

Intestinal disease is increased by the heats of summer, probably increasing the activity of disease matter in air and water, or in the organism itself.

The mortality ascribed to diseases of the digestive organs slightly declined, those by diseases of the urinary organs increased, and that notwith-

standing the sensible diminution of the mortality of stone by one of the most brilliant discoveries of surgery.

Since 1860-64 the mortality by the painful disease, ovarian dropsy, has diminished; it was then at the rate of  $\cdot 13$ , from that it fell to  $\cdot 11$  in 1865-9, and to  $\cdot 10$ ,  $\cdot 09$ ,  $\cdot 09$  in the three last years. This may be fairly traced to the skill with which surgeons now extirpate the ovaries, the seat of the disease.

Addison's disease was fatal to 28 males, 29 females; the greatest number of deaths amongst males was at the age 35-45, and amongst females at the age 45-55.

The diseases of the integumentary system were fatal in 1311 instances, including 179 from eczema, 48 from pemphigus, 16 from impetigo, 20 from psoriasis, 13 from elephantiasis, 10 from lepra. What a contrast with the state of things when Europe was covered with hospitals for lepers!

#### IV.—DEVELOPMENTAL DISEASES.

These diseases are incidental to reproduction, growth, nutrition, and decay. They were the assigned causes of 75,287 deaths, and the rate of mortality under them was 32.88. Of the children born before their intra-uterine life was completed, 10,334 died from causes not specified; they were unable to struggle on into maturer life; 571 children died of cyanosis, the heart's formation remaining incomplete. Spina bifida—the vertebræ of the spine remaining incomplete—was fatal to 452 children; or to exactly the same number (452) as died from all other malformations. Among the deaths from these other malformations there were ascribed to cleft palate 61, anus imperforatus 167, both forms occurring in males more frequently than in females.

Teething is one of the first marked steps in development after birth, and by inducing convulsions and other irritative reflex diseases, it is chargeable with a certain number of deaths; the number so charged was 4093.

The second order of this class consists of the diseases incidental to reproduction, 99 deaths were referred to paramenia and disorders of menstruation; and 2403 to childbirth. This is exclusive of 1400 deaths by metria or puerperal fever. The total deaths of childbearing women by childbearing was 3803. These deaths are very deplorable; they require to be watched, as they are from very various causes, some of which are under control. Metria has been frequently induced by collecting many women into the wards of lying-in hospitals; that evil has been to some extent remedied, but it still exists. A very common cause of death is the want of skilled midwives, to which I have before called attention. A mother's life often hangs on some simple act which can be easily performed by a woman who understands the mechanism of delivery; in the absence of the skillful hand to perform that act she dies and carries out of life with her the unborn child. In some cases there is malformation, or displacement; and in others the powers fail despite the efforts of the highest medical skill; the resources of art fail in the great struggle. The day may be looked forward to when less than 49 mothers perish to every 10,000 children born alive. In the year 1872 the proportion was only 46. But this is higher than the 42 in the years 1857 and 1869; lower than the 60, 61, and 58 in the epidemic years 1847-8-9.

A certain number of women in the early stages of pregnancy die of small-pox, scarlet fever, and other diseases; the number so returned is 34.\*

\* See Table 11, p. 249.

An attack of small-pox, scarlet fever, or enteric fever is almost invariably fatal to a woman in the advanced stages of pregnancy, and is properly referred to those heads in the abstracts; 233 such deaths were referred to small-pox, 38 to scarlet fever, 33 to enteric fever, 18 to diarrhoea, 10 to rheumatism, and 3 to syphilis. 65 deaths were by pneumonia, and 1 death by intussusception. 131 deaths of pregnant women were ascribed to phthisis, 68 to heart disease, 19 to nephria (Bright's disease).

There is in some cases early in life simple debility, failure of vital force; in others reversion of the nutritive process, wasting away, atrophy, ending fatally. To this head are referred 29,983 deaths, exclusive of old age.

This wasting away, this debility, occurs naturally in old age, of which 26,900 persons died. The lamp of life was burnt out. Disease itself, as years wear out the body, is shorn of its symptoms which require strength for their manifestation; and it is probable that some of the deaths ascribed primarily to old age may have been preceded by pneumonia or other latent maladies.

### V.—VIOLENT DEATHS.

In many cases death is evidently caused by mechanical force, or by some of its various changes. Thus in the year 46 persons were struck and killed by lightning. The electric force quenched the force of life. The circumstances of each death during the years 1867-72, so far as recorded, are printed in Table 13, pages 250-1, for the facts may probably be turned to account by physicists at some future time, and although man cannot everywhere arrest Jove's lightning, he can avoid the places where it is most apt to strike. The 46 is an extraordinary number of deaths; the numbers in the five preceding years having been 17, 11, 7, 19, and 28; after the year 1869 such deaths rapidly increased.

The deaths by violence of every kind were 17,257, and the mortality by them was 7.54; this is slightly below 7.64, the average mortality of twenty years. The mortality gradually rose from 7.42 in the five years 1855-9 to 7.70 and 7.97 in the two quinquennials following. The deaths by violence bear a certain proportion to the quantity of mechanical force in use, unless special precautions are employed to meet new exigencies; and that force is increasing every year.

It will be borne in mind that the deaths of merchant seamen by *drowning at sea*, which amounted according to the returns to 2297, besides 67 in the Royal Navy, are not included in the above numbers.

The violent deaths are arranged in five orders, according as they are caused indirectly or directly by human agency; 15,162 deaths in the first order are referred to what has been called accident, but may be more properly called in many cases negligence; by battle, the deaths in the second order, no deaths have happily in England been caused since registration began; the deaths by homicide, in the third order, were 387, the deaths by suicide, in the fourth order, were 1,514; and the registered deaths in the final fifth order, by execution, were 10.

The mortality under the five orders was 6.62 by accident or negligence, 0 by battle, .17 by homicide, .66 by suicide, and .004 by execution. This classification is based on the verdicts of the coroners juries which are, as has been shown, often reversed subsequently. The homicides, including infanticides, are perhaps overstated, and the suicides are understated, as in cases of doubt the deaths are referred to the first order. The deaths by suicide are stationary, and there is no reason to believe that the apparent is not a real decline of homicide. Assassination is happily not a crime to which the English race is addicted.

Some of the particular circumstances in which homicide and suicide were perpetrated are shown in the tables. Thus of the 237 persons murdered

111 were males, 126 females; 64 males and 66 females were under a month old; 8 more were boys, 15 girls, under 5; 4 were boys, 8 girls, (5—20); leaving 35 adult men and 37 women murdered over the age of 20. As in India more girls than boys were murdered. The returns show, that of the adult men 25, of the women 15, were murdered by wounds and mechanical violence; of the men one was drowned, of the women 2 were suffocated or strangled. It is difficult to draw any inference from the facts as the coroners omitted in their returns to state in 99 cases how the murder was committed; but it would appear that the men in proportion to their number are as often killed by mechanical violence as the women. No murder is ascribed to poisoning.

101 deaths of males and 49 of females are returned as manslaughters; they are all except 27 males and 9 females adults of 20 years of age and upwards. Of the 74 men manslaughtered, 50 were killed by wounds, blows, and other kinds of mechanical violence; of the manslaughters of 40 women, only 21 are referred to the same score. This may perhaps lessen the alarm some people feel at the imaginary increase of wife-murders.

Suicide was committed by 1095 males, 419 females; 6 of the males, 3 of the females, being over 10 and under 15 years of age; 36 of the men, 11 of the women, over 75 years of age.

The mode of suicide was not returned in 48 cases, 33 males, 15 females. Of the men 186 drowned, 438 hanged, 28 strangled themselves; 24 men, 19 women, threw themselves from heights; 217 men, 62 women, cut their throats; 11 men, 4 women, cut or stabbed themselves; 57 men, no women, shot themselves; 72 men, 66 women, poisoned themselves: laudanum, strychnia, prussic acid, and "vermin killers" were the most common poisons.

Among the deaths of the first order, due to negligence or, the true cause not being known, to what is called accident, there are, exclusive of deaths in mines, 1516 from suffocation, and 3004 from drowning. Of the cases of drowning, exclusive of 335 suicides and 8 murders, there were 2519 returned without any further detail; the insignificant word "found" occurring, however, in 1049 instances. Of the other males, 242 were drowned while bathing, 68 by falling from ships and boats into the water, 102 by shipwreck near the coast, so as to be buried ashore, 4 by immersion while skating or sliding, 63 by upset of boats; of the females distinguished, 2 were drowned while bathing, 2 by falling from ships or boats into the water, 5 by shipwreck, 6 by upset of boats.

Of the males dying by suffocation the mode is not returned in the case of 321 males; but 59 were choked by food, &c.; 273 were smothered under the bedclothes, and 155 were overlaid by mother. 19 died by chloroform. Among females suffocated, the mode of death was not stated in 260 cases; 16 were choked by food, &c., 232 were smothered under the bedclothes, and 171 were overlaid. Four women died by chloroform; or only a fifth part of the men who died by it.

The number of deaths by mechanical violence, exclusive of deaths in mines and on railways, was 5843, namely, 4575 of males and 1268 of females. The particulars when returned are given in the table (p. 196—215). It may suffice to state here that 226 were by horses or other animals, and 1239 by conveyances drawn by horses; of the latter cases 1048 were deaths of males and 191 of females.

There are two groups of violent deaths which have been separately distinguished since 1863, the violent deaths in mines, and the violent deaths on railways. These two great branches of industry are carried on under unusual circumstances, and without the utmost vigilance and skill they involve great sacrifices of life.

The mines are of two kinds, the coal mines, and the copper or other metallic mines, each kind involving its peculiar dangers. The danger of the

coal miner arises from gaseous explosions and from falls of coal, stone, and other bodies from the roof. The copper miner is free from the danger of explosion but deprived of the advantages of ventilation, he works in impure, heated air, which induces a peculiar form of lung disease, developed after a certain number of years exposure. Here we have to do only with violent deaths, which are much less common in copper than they are in coal mines.

The mortality by violent deaths in mines and on railways is shown in the two Tables annexed,\* at the several ages, as calculated on the population living at those ages.

The second Table shows the mortality by violent deaths in mines as calculated on the respective mining population, and on the general male population of England and Wales.

With regard to the violent deaths of every kind on railways, either of passengers or railway servants, the mortality has been calculated on the whole population living at several periods of life. This may be compared with the loss of life in mines.

We have no means of determining the mean population exposed to risk on railways, but the number of railway male servants of every kind in 1871 was 84,625, including 13,715 engine drivers and stokers, 22,083 railway officers, clerks, station-masters, and 48,827 railway attendants and servants. This is exclusive of 45,070 railway labourers, platelayers, and navvies.

The number of railway journeys in 1872 was 423,000,000, exclusive of journeys by season ticket holders, making perhaps in the aggregate 500,000,000. Taking each journey as of 0.6 miles† and allowing half an hour for its performance, it follows that the average number of passengers exposed to risk through the year does not exceed 30,000. Adding the 30,000 to 84,625 the total number of persons exposed a year to risk, and among whom the deaths on railways may have occurred was 115,000. Now the deaths were 1160, so the annual rate of mortality was 11 in 10,000.

We have no means in the returns of separating the deaths of passengers from the rest, and there is reason to believe that the companies' returns in which this distinction is made are incomplete.

We do not know the mean ages of railway passengers and railway servants in the aggregate, but dividing the deaths at each age by the living at each age in the whole population, then it is seen that the mortality at seven decennial ages over the age of 15 differs little among men: the loss of life by violence on railways is at a rate slightly above 1 in 10,000; it is 1.0 at the age 15-25, 1.2 at the age 25-35.

It will be seen upon comparing the above figures with those made by the companies to the Board of Trade for the corresponding years that the latter were exceedingly defective, and I claim for the returns which have been made in your Reports, the merit of having called public attention to the excessive number of deaths among the railway staff, as the mortality of that meritorious class of men might be greatly reduced.

I have the honour to be,

Sir

Your obedient servant,

WILLIAM FARR.

To

*The Registrar General.*

\* See page 253.

† See the calculation on which this is based in my Letter to the Registrar-General. Appendix to 31st Report, p. 204.

† The cases of *angina membranacea* were included with scarlet fever until 1869; for several years prior to that date they were, however, separately distinguished by a marginal note on the ticking sheet, as they have been since 1869, when they were first classed to diphtheria.

TABLE 1. (continued.)—Causes of Death registered

Class.	CAUSES OF DEATH.	1847	1848	1849	1850	1851	1852	1853	1854	1855	1856	1857	1858	1859

\* From 1847 to 1857, inclusive, premature birth and infantile debility were abstracted under one heading. In order, therefore, to establish something like uniformity in the above Table, the numbers against each of these separate headings have been estimated from the proportions which the numbers under each bore to the sum of the two in subsequent years, when they were

† See note on page 230.

in England in each of the 26 Years 1847-1872.

\* The rates given in this Table for the various groups of years are the means of the calculated rates in the several years. Under some of the separate headings the means cannot be given for the entire period, as the classification in full detail has not been made during the whole 23 years. In a certain number of cases in each year the cause of death is not stated; in calculating the proportional numbers since 1853 these have been distributed pro rata over all the causes in the Table.

† Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

TABLE 4\* (continued).—Mean Annual Rate of Mortality in England from each CLASS of CAUSES and from each CAUSE of DEATH during the 20 Years 1850-69, and in each Decade and Quinquennial of that Period; also the Rate of Mortality in the Years 1870, 1871, and 1872.

## INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and not under A.]

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted, the districts have been re-numbered consecutively from 1 to 627.\*

For names of Towns, such as *Leamington, Torquay, &c.*, which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 259) and "Index of certain Towns" (page 269).

## A

Aberayron, 600.  
Abergavenny, 579.  
Aberystwith, 601.  
Abingdon, 114.  
Alcester, 398.  
Alderbury (Salisbury), 254.  
Alwick, 560.  
Alresford, 104.  
Alston, 565.  
Alton, 105.  
Altrincham, 447.  
Alverstoke, 88.  
Amersham, 139.  
Amesbury, 253.  
Amphill, 172.  
Andover, 109.  
Anglesey, 627.  
Ashborne, 440.  
Ashby-de-la-Zouch, 407.  
Ashton-under-Lyne, 468.  
Aston, 388.  
Atherham (Shrewsbury) 351.  
Atherstone, 390.  
Auckland, 543.  
Axbridge, 315.  
Axminster, 269.  
Aylesbury, 142.  
Aylsham, 223.  
Aysgarth, 537.

## B

Bakewell, 442.  
Bala, 620.  
Banbury, 154.  
Bangor, 625.  
Barnet, 127.  
Barnsley, 505.  
Barnstaple, 285.  
Barrow-upon-Soar, 409.  
Barton-upon-Irwell, 464.  
Basford, 431.  
Basingstoke, 107.  
Bath, 317.  
Battle, 68.  
Beaminster, 267.  
Bedale, 535.

Bedford, 170.  
Bedminster, 319.  
Bedwelty, 580.  
Belford, 561.  
Bellingham, 558.  
Belper, 439.  
Berkhampstead, 138.  
Berwick, 562.  
Bethnal Green, 15.  
Beverley, 518.  
Bicester, 150.  
Bideford, 287.  
Biggleswade, 171.  
Billericay, 190.  
Billesdon, 403.  
Bingham, 436.  
Birkenhead, 454.  
Birmingham, 387.  
Bishop Stortford, 130.  
Blaby, 404.  
Blackburn, 474.  
Blandford, 260.  
Blean, 57.  
Blofield, 228.  
Blything, 216.  
Bodmin, 294.  
Bolton, 462.  
Bootle, 573.  
Bosmere, 211.  
Boston, 418.  
Bourn, 415.  
Brackley, 155.  
Bradfield, 117.  
Bradford-on-Avon, 249.  
Bradford (Yorkshire), 496.  
Braintree, 199.  
Bramley, 499.  
Brampton, 567.  
Brecknock, 604.  
Brentford, 125.  
Bridge, 55.  
Bridgend, 586.  
Bridgnorth, 348.  
Bridgwater, 307.  
Bridlington, 524.  
Bridport, 268.  
Brighton, 76.  
Bristol, 320.  
Brixworth, 161.  
Bromley, 40.

Bromsgrove, 385.  
Bromyard, 341.  
Buckingham, 145.  
Builth, 603.  
Burnley, 472.  
Burton-upon-Trent, 368.  
Bury, 463.  
Bury St. Edmunds, 206.

## C

Caistor, 425.  
Calne, 245.  
Camberwell, 25.  
Cambridge, 178.  
Camelford, 290.  
Canterbury, 56.  
Cardiff, 583.  
Cardigan, 597.  
Carlisle, 569.  
Carmarthen, 593.  
Carnarvon, 624.  
Castle Ward, 555.  
Catherington, 102.  
Caxton, 176.  
Chapel-en-le-Frith, 443.  
Chard, 309.  
Cheadle, 366.  
Chelmsford, 191.  
Chelsea, 2.  
Cheltenham, 335.  
Chepstow, 577.  
Chertsey, 30.  
Chester, 452.  
Chesterfield, 441.  
Chester-le-Street, 549.  
Chesterston, 177.  
Chichester, 83.  
Chippenhams, 244.  
Chipping Norton, 153.  
Chipping Sodbury, 322.  
Chorley, 475.  
Chorlton, 465.  
Christchurch, 92.  
Church Stretton, 346.  
Cirencester, 331.  
Cleobury Mortimer, 347.  
Clifton, 321.  
Clitheroe, 473.

\* Thus, the number of Marriages in the Aberayron District may at once be ascertained by referring to the "Abstract of Marriages," District number 600 (see page 24); and the numbers of Births and Deaths, of Deaths at different Ages, &c. will be found by referring to the same district number in the respective Tables.

Clun, 345.  
 Clutton, 316.  
 Cockermouth, 571.  
 Colchester, 195.  
 Congleton, 450.  
 Conway, 626.  
 Cookham, 120.  
 Corwen, 619.  
 Cosford, 204.  
 Coventry, 393.  
 Cranbrook, 51.  
 Crediton, 282.  
 Crickhowell, 605.  
 Cricklade, 242.  
 Croydon, 37.  
 Cuckfield, 74.

**D**

Darlington, 540.  
 Dartford, 41.  
 Daventry, 160.  
 Depwade, 230.  
 Derby, 438.  
 Devizes, 247.  
 Dewsbury, 501.  
 Docking, 235.  
 Dolgelly, 621.  
 Doncaster, 510.  
 Dorchester, 265.  
 Dorking, 34.  
 Dover, 63.  
 Downham, 238.  
 Driffield, 523.  
 Droitwich, 384.  
 Droxford, 101.  
 Dudley, 375.  
 Dulverton, 304.  
 Dunmow, 200.  
 Durham, 546.  
 Dursley, 324.

**E**

Easington, 547.  
 Easingwold, 527.  
 East Ashford, 54.  
 Eastbourne, 69.  
 East Grinstead, 73.  
 Easthampstead, 121.  
 East Preston (Worthing), 81.  
 East Retford, 428.  
 Eastry, 62.  
 East Stonehouse, 278.  
 East Ward, 574.  
 Ecclesall Bierlow, 507.  
 Edmonton, 128.  
 Elham, 64.  
 Ellesmere, 354.  
 Ely, 181.  
 Epping, 186.  
 Epsom, 29.  
 Erpingham, 222.  
 Eton, 140.  
 Evesham, 382.  
 Exeter, 272.

**F**

Falmouth, 298.  
 Fareham, 89.  
 Faringdon, 113.  
 Farnham, 32.  
 Faversham, 58.  
 Festiniog, 622.  
 Flegg, 220.  
 Foleshill, 392.  
 Forden (Montgomery), 612.  
 Fordingbridge, 94.  
 Forehoe, 226.  
 Freebridge Lynn, 236.  
 Frome, 312.  
 Fylde, 477.

## INDEX OF SUB-DISTRICTS.

This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having compound names in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (570; 2) is the 2d Sub-District of the Wigton District, No. 570.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.
<b>A</b>

## ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S THIRTY-FIFTH ANNUAL  
REPORT AND APPENDIX.

	PAGES
AGES ; of Persons married in 1872 . . . . .	xi
Mean Age at Marriage . . . . .	xi
Deaths of Males and Females registered at different Ages in England in each of the Years 1838-72. (Tables 20, 21, pp. lxxxi, lxxxii.) . . . . .	xviii-xix
Mortality of Males and Females at different Ages in England in the Years 1838-72. (Tables 22-25, pp. lxxxiii-lxxxvi.) . . . . .	xviii-xix
of 291,014 Persons married in 1872, distinguishing Bachelors, Spinners, Widowers, Widows . . . . .	26-28
at Death of Males and Females registered in 1872 in Divisions, Counties, and Districts . . . . .	120-141
at Death of Males and Females in England registered from different Causes, in 1872 . . . . .	144-149
at Death of Males and Females in England registered from different Supplemental Causes, in 1872 . . . . .	150-153
at Death of Males and Females in London registered from different Causes, in 1872 . . . . .	154-159
(See also MARRIAGES, BIRTHS, and DEATHS.)	
ALCOHOLISM. (See INTEMPERANCE and DELIRIUM TREMENS.)	
APPENDIX TABLES . . . . .	230-253
AREA in Statute Acres of each Division, County, District, and Sub-district . . . . .	30-84
of the Islands in the British Seas. (Table 46.) . . . .	civ
of the sub-districts of London, <i>inclusive</i> and <i>exclusive</i> of Tidal Water. (Table 36.) . . . .	xcv
in Acres and Hectares of the United Kingdom. (Table 44.) . . . .	ciii
ARMY ; Strength and Mortality of the Army at Home and Abroad. (Tables 50-57, pp. cviii-cx.) . . . . .	xxii
Average Strength of the British Army at Home in 1872. (Table 50, p. cviii.) . . . . .	xxii
Average Strength and Proportion per cent. of the British Army at Home and Abroad in each of the Years 1861-72. (Table 51.) . . . .	cviii
Mortality of the Army at Home in 1872. (Table 52, p. cviii.) . . . . .	xxii
Average Strength of the British Army Abroad in each of the Years 1869-72. (Table 53.) . . . . .	cix
Number of Deaths in the British Army at Home and Abroad, 1869-72. (Table 54.) . . . . .	cix
Annual Rate of Mortality per 1000 amongst Officers and Men in the Army at Home and Abroad, 1858-72. (Table 55.) . . . .	cix
Strength at Home and Abroad in 1861 and 1871, showing the Numbers and Proportion per cent. born in the different parts of the United Kingdom and elsewhere. (Table 56.) . . . .	cx
Deaths in Army Abroad of Officers and Men belonging to Great Britain and to England and Wales, 1858-72. (Table 57.) . . . .	cx

AUSTRIA; Average Annual Proportion to Population of Persons married, Births, and Deaths, 1853-72 . . . . .	xxviii
Marriage, Birth, and Death Rates compared with those of other European States. (Table 64.) . . . . .	cxvii
Estimated Population; Number, and Proportion to Population, of Persons married, Births, and Deaths, in each of the Years 1853-72. (Table 68.) . . . . .	cxix
BERLIN; Population, Deaths, and Death-rate in 1872 . . . . .	lvi
BIRTHS in 1872, exclusive of still-born . . . . .	xv
that escape Registration . . . . .	v & xvi
of the two Sexes . . . . .	xvi
out of Wedlock, proportions in various Counties . . . . .	xvi-xvii
in quarter ending March 1872 . . . . .	xxx
in quarter ending June „ . . . .	xxxvi
in quarter ending September „ . . . .	xl-xli
in quarter ending December „ . . . .	xlvi
registered in England, and excess over Deaths, in each Year, 1838-72. (Table 1.) . . . .	lxii
Legitimate and Illegitimate in England in 1842 and in the Years 1845-72, and Proportion of Males to Females. (Table 11.) . . . .	lxxii
proportion of Illegitimate Children to every 100 Births in the several Counties of England in each of the Years 1862-72. (Table 12.) . . . .	lxxiii
registered in England in each Quarter of the Years 1838-72. (Table 13.) . . . .	lxxiv
proportional Number of Births in each Quarter to 1,000 Births in the average Quarter of the Years 1838-72. (Table 14.) . . . .	lxxv
in Counties, in 1872. Numbers, Sex, Legitimate and Illegitimate; Proportions of Male to Female Births, Legitimate and Illegitimate; Proportion of Illegitimate Births to Total Births. (Table 15.) . . . .	lxxvi
proportion of Male and Female Children born in the several Counties of England during each of the Years 1862-72. (Table 16.) . . . .	lxxvii
in Fifty large Town Districts in 1872. (Table 33.) . . . .	xciii
in Twenty-one large Towns of the United Kingdom in 1872. (Table 34.) . . . .	xciv
in London in the Years 1859-72, distinguishing Males and Females. (Table 38.) . . . .	xcvii
in the United Kingdom in 1872. (Table 44.) . . . .	cliii
in the Islands of the British Seas in the Years 1851-72. (Table 46.) . . . .	civ
of British Subjects at Sea, in the Years 1856-72. (Table 58.) . . . .	cxix
registered in each of the Divisions, Counties, Districts, and Sub-districts in 1872, distinguishing Males and Females and the Illegitimate . . . . .	30-84
excess of, over Deaths in each of the Divisions, Counties, Districts, and Sub-districts in 1872 . . . . .	30-84
registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1872 . . . . .	86-89
of Children born out of Wedlock registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1872 . . . . .	90-93
in Foreign States. (See FOREIGN STATES.)	
Illegitimate. (See ILLEGITIMATE BIRTHS.)	

	PAGES
BIRTH-RATE in England, 1838-42, 1868-72, and in 1872 . . . . .	xv
in England in each of the Years 1838-72. (Table 2.) . . . .	lxiii
in England in each Quarter of the Years 1838-72. (Table 13.) . . . .	lxxiv
in Counties in each of the Years 1862-72. (Table 17.) . . . .	lxxviii
in Fifty large Town Districts in 1872. (Table 33.) . . . .	xeliii
in Twenty-one large Towns of the United Kingdom in 1872. (Table 34.) . . . . .	xciv
in the United Kingdom in 1872. (Table 45.) . . . . .	ciii
in Foreign States. ( <i>See FOREIGN STATES.</i> )	
BOMBAY; Population, Deaths, and Death-rate in 1872 . . . . .	lvi
BRONCHITIS; Mortality from . . . . .	225
BRUSSELS; Population, Deaths, and Death-rate in 1872 . . . . .	lvi
BURNS AND SCALDS. ( <i>See VIOLENT DEATHS.</i> )	
CALCUTTA; Population, Deaths, and Death-rate in 1872 . . . . .	lvi
CAUSES of DEATH; of Seamen in the British Merchant Service in 1872. (Table 60.) . . . . .	cxiii
of Males and Females in England, at different Periods of Life, in 1872 . . . . .	144-149
(Supplementary Table) of Males and Females in England, at different Periods of Life, in 1872 . . . . .	150-153
of Males and Females in London at different Periods of Life, in 1872 . . . . .	154-159
of Males and Females in England, and in each of the Divisions and Counties, in 1872 . . . . .	160-183
(from certain zymotic and other Causes) in 1872, in the Divisions, Counties, and Districts of England . . . . .	184-195
Dr. Farr's Letter to the Registrar General thereon . . . . .	219-229
desirability of verdicts by Coroners' juries being less vague <sup>4</sup> . . . . .	220-221
certificates of, by medical practitioners . . . . .	222-223
registered in England in each of the Years 1847-72. (Table 1.— App.) . . . . .	230-235
Mortality from the several Causes in each of the Years 1855-72. (Table 2.—App.) . . . . .	236-238
proportional Numbers dying from each Cause in 1872. (Table 3. —App.) . . . . .	239
Rate of Mortality from different Causes during four periods of Five Years, two Decades, and in 1870, 1871, and 1872. (Table 4.—App.) . . . . .	240-243
in England, in 1872, arranged in the order of their fatality. (Table 5.—App.) . . . . .	244
CENTENARIANS; deaths of reputed. (Table 19.) . . . . .	lxxx
CERTIFICATES of CAUSE of DEATH . . . . .	221-223
CHILDBIRTH; excessive number of Deaths from . . . . .	226
Deaths in 1872, at different Ages, of Women after Childbearing, classed under different Diseases, and neither referred to Child- birth nor to Metria in the Abstracts. (Table 10.—App.) . . . . .	248
Deaths of Women in 1872 who were returned as pregnant, classed under certain Diseases. (Table 11.—App.) . . . . .	249
Deaths of Women from Metria and Childbirth in each of the 26 Years, 1847-72, and proportional Deaths of Mothers to Children born alive. (Table 12.—App.) . . . . .	249

	PAGES
CONSOLS; average price of, 1852 to 1872. (Table 31.) . . . .	xc
CONSTITUTIONAL DISEASES . . . . .	224
CORONERS' RETURNS, 1872 . . . . .	219

of the two Sexes at different Ages . . . . .	xviii-xix
in Public Institutions . . . . .	xx-xxi
in the British Army at home and abroad . . . . .	xxii
in the Royal Navy in 1872 and in the Years 1861-65 . . . .	xxii-xxiii
and State of the Public Health in quarter ending March 1872 .	xxxii-xxxv
in quarter ending June . . . . .	xxxvii-xl
in quarter ending Sept. . . . .	xli-xliv
in quarter ending Dec. . . . .	xlvi-xlviii
in Eleven Foreign Cities . . . . .	lvi
registered in England in each Year 1838-72. (Table 1.) . .	lxii
excess of Births over, in each Year 1838-72. (Table 1.) . .	lxii
of reputed Centenarians. (Table 19.) . . . .	lxxx
registered in England at different Ages (Males and Females) in each	
of the Years 1838-72. (Tables 20, 21.) . . . .	lxxxii-lxxxiii
registered in England in each Quarter of the Years 1838-72.	
(Table 26.) . . . . .	lxxxvii
proportional Number in each Quarter to 1,000 Deaths in the average	
Quarter 1838-72. (Table 27.) . . . . .	lxxxviii
in Fifty large Town Districts in 1872. (Table 33.) . . . .	xciii
in Twenty-one large Towns in 1872. (Table 34.) . . . .	xciv
in Public Institutions of London in each of the Years 1860-72.	
(Table 35.) . . . . .	xciv
in London of Males and Females in each of the Years 1859-72.	
(Table 38.) . . . . .	xcvii
and Meteorology in London in each of the Years 1840-72.	
(Table 39.) . . . . .	xcvii
in the United Kingdom in 1872. (Table 44.) . . . .	ciii
in the Islands of the British Seas in each of the Years 1851-72.	
(Table 46.) . . . . .	civ
in the British Army at home in 1872. (Table 52.) . . . .	cviii
in the British Army at home and abroad in each of the Years	
1869-72. (Table 54.) . . . . .	cix
of Officers and Men in the Army abroad belonging to Great	
Britain and to England and Wales in each of the Years	
1858-72. (Table 57.) . . . . .	cx
of British Subjects at Sea in each of the Years 1856-72.	
(Table 58.) . . . . .	cx
of Merchant Seamen at Sea in each of the Years 1852-72.	
(Table 59.) . . . . .	cxii
at different Ages of Merchant Seamen in 1872. (Table 60.) .	cxiii
in Denmark, Sweden, Austria, Prussia, The Netherlands, France,	
Spain, and Italy. (Tables 66-73.) . . . . .	cxviii-cxxii
registered in each of the Divisions, Counties, Districts, and Sub-	
districts in 1872 (distinguishing Males and Females) . . .	30-84
excess of Births over, in each of the Divisions, Counties, Districts,	
and Sub-districts in 1872 . . . . .	30-84
registered in each of the Four Quarters of 1872 (distinguishing Males	
and Females), in Divisions and Counties . . . . .	94-97
in 1872 in the principal Public Institutions . . . . .	100-117
of Males and Females at different Ages in 1872 in Divisions,	
Counties, and Districts . . . . .	120-141

## DEATHS—continued.

from different Classes of Disease . . . . .	223-229
from several Causes in 18 of the largest English Towns in 1872. (Table 14.—App.) . . . . .	252
from Childbirth. (See <i>CHILDBIRTH</i> .)	
from different Causes. (See <i>CAUSES OF DEATH</i> .)	
from Fever. (See <i>FEVER</i> .)	
by Lightning. (See <i>LIGHTNING</i> .)	
from Manslaughter. (See <i>MANSLAUGHTER</i> .)	
from Murder and Infanticide. (See <i>MURDER</i> .)	
from Privation. (See <i>PRIVATION</i> .)	
from Suicide. (See <i>SUICIDE</i> .)	
from Violence. (See <i>VIOLENT DEATHS</i> .)	
DEATH-RATE in each of the Years 1867-72 . . . . .	xvii
of Males and Females at different Ages . . . . .	xviii-xix

in England and its 11 Registration Divisions in the Two Decades 1851-60 and 1861-70, and in 1872. (Table 30.) . . . .	xc
in each Week of 1872 in Twenty-one large Towns of the United Kingdom. (Table 32.) . . . . .	xcii
in Fifty large Town Districts in 1872. (Table 33.) . . . .	xciii
in Twenty-one large Towns of the United Kingdom in the Years 1869-72. (Table 34.) . . . . .	xciv
in London in each Year 1859-72. (Table 38.) . . . .	xcvii
in the United Kingdom in 1872. (Table 45.) . . . .	ciii
in the Army in the United Kingdom in 1872. (Table 52.) . . . .	cviii
amongst Officers and Men in the British Army at home and abroad, 1858-72. (Table 55.) . . . . .	cix
amongst Merchant Seamen at Sea in each Year 1852-72. (Table 59.)	cxii
from different Diseases and Classes of Disease . . . . .	223-229

DEATH-RATE— <i>continued.</i>	PAGES
from the several Causes to 1,000,000 living in each of the Years 1855-72. (Table 2.—App.) . . . . .	236-238
from different Causes in four periods of Five Years, Two Decades, and in 1870, 1871, and 1872. (Table 4.—App.) . . . . .	240-243
in 18 of the largest English Towns in 1872. (Table 15.—App.) . . . . .	252
DELIRIUM TREMENS, Deaths from, in 1872 . . . . .	224
DENMARK; Average Annual Proportion to Population of Persons married, Births, and Deaths, 1853-72 . . . . .	xxviii
Marriage, Birth, and Death Rates compared with those of other European States. (Table 64.) . . . . .	cxvii
Population; Number and Proportion to Population of Persons married, Births, and Deaths, 1850 to 1872. (Table 66.) . . . . .	cxviii
DENSITY; in Districts of London. ( <i>See also</i> Table 37, p. xevi.) . . . . .	1
Persons to an Acre in 1871 in England and its 11 Registration Divisions. (Table 30.) . . . . .	xc
Persons to an Acre in London and 20 large Towns in 1872. (Table 34.) . . . . .	xciv
Acres to a Person and Hectares to a Person in the United Kingdom in 1872. (Table 45.) . . . . .	ciii
DEVELOPMENTAL DISEASES . . . . .	226
DIGESTIVE ORGANS, Deaths from diseases of, in 1872 . . . . .	225
DIPHTHERIA; Deaths in England in 1872 much below the average . . . . .	223
DISEASES. ( <i>See</i> CAUSES OF DEATH.)	
DISTRICTS: changes in the constitution of, during 1872. (Table 74.) . . . . .	cxxii
Alphabetical Index of . . . . .	255-258
DIVISIONS of England: Average Annual Rate of Mortality in the Eleven Divisions in the Two Decades 1851-60 and 1861-70; and in the Four Quarters of 1872. (Table 30.) . . . . .	xc
DIVORCES; Marriages of Divorced Men and Women in each of the 12 Years 1861-72, and the Districts in which they were celebrated in 1872. (Table 10, p. lxxi.) . . . . .	xi
Decrees in 1872 . . . . .	xi
EDUCATION; progress of, as indicated by Signatures to Marriage Registers . . . . .	xiv
EMIGRATION in 1872 . . . . .	vi-vii
Effect of, on Population . . . . .	vi-vii
Return of Emigrants to England . . . . .	vi-vii
from the United Kingdom, in each of the Years 1815 to 1872. (Table 47.) . . . . .	cv
from the United Kingdom in 1872, distinguishing the Destination, Sex, Age, Condition, Occupation, and Origin of the Emigrants. (Tables 48, 49.) . . . . .	cvi-cvii
ENGLAND AND WALES; Summary of results of Registration—	
in Years 1837-72 . . . . .	xxi
in quarter ending March 1872 . . . . .	xxx
in quarter ending June „ . . . .	xxxvi
in quarter ending September „ . . . .	xl
in quarter ending December „ . . . .	xliv
Area, Estimated Population; Marriages, Births, and Deaths in 1872. (Table 44.) . . . . .	ciii

ENGLAND AND WALES— <i>continued</i> .	PAGES
Density; and Proportion, per 1,000, of Marriages, Births, and Deaths to the Population in 1872. (Table 45.) . . . . .	ciii
Estimated Population of both Sexes in the middle of each of the Years 1801-1874. (Table 61.) . . . . .	cxiv

### ERRATUM.

The following correction should be made in the *Thirty-fourth Annual Report*. On page 248, in the headings of columns 3. and 6. —

*Instead of* “to 1,000,000 Deaths from All Causes,”  
*read* “to 1,000,000 Persons living.”
